**The Apocalypse of Empire** Stephen J. Shoemaker, 2018-11-09 In **The Apocalypse of Empire** Stephen J. Shoemaker argues that earliest Islam was a movement driven by urgent eschatological belief that focused on the conquest or liberation of the biblical Holy Land and situates this belief within a broader cultural environment of apocalyptic anticipation Shoemaker looks to the Qur'an's fervent representation of the imminent end of the world and the importance Muhammad and his earliest followers placed on imperial expansion Offering important contemporary context for the imperial eschatology that seems to have fueled the rise of Islam he surveys the political eschatologies of early Byzantine Christianity Judaism and Sasanian Zoroastrianism at the advent of Islam and argues that they often relate imperial ambition to beliefs about the end of the world Moreover he contends formative Islam's embrace of this broader religious trend of Mediterranean late antiquity provides invaluable evidence for understanding the beginnings of the religion at a time when sources are generally scarce and often highly problematic Scholarship on apocalyptic literature in early Judaism and Christianity frequently maintains that the genre is decidedly anti imperial in its very nature While it may be that early Jewish apocalyptic literature frequently displays this tendency Shoemaker demonstrates that this quality is not characteristic of apocalypticism at all times and in all

places In the late antique Mediterranean as in the European Middle Ages apocalypticism was regularly associated with ideas of imperial expansion and triumph which expected the culmination of history to arrive through the universal dominion of a divinely chosen world empire This imperial apocalypticism not only affords an invaluable backdrop for understanding the rise of Islam but also reveals an important transition within the history of Western doctrine during late antiquity **Chelsea**,1978 **Productivity in Construction Projects** Ted Trauner,Chris Kay,Brian Furniss,2022-09-21 PRODUCTIVITY IN CONSTRUCTION PROJECTS From planning design to post construction this valuable guide provides the construction industry the key to understanding the importance of properly tracking and measuring productivity resulting in increased efficiency and profitability for contractors subcontractors owners civil and construction engineers and attorneys Productivity in Construction Projects anticipates and answers the questions of owners contractors sub contractors and construction professionals to avoid cost overruns in a specific area of work or when activities are taking more resources to perform than planned Packed with real world case studies Productivity in Construction Projects thirteen chapters move beyond the symptoms and provide a remedy This book provides a comprehensive look at how to Complete more projects on time and budget and earn greater profits and future business Track and analyze productivity on construction projects and quantify additional costs resulting from productivity losses Select the right experts and attorneys should litigation or arbitration occur and employ credible and reliable methods of analysis Solve problems on the project instead of incurring lengthy and costly litigation or arbitration World Development Report 2015 World Bank,2014-12-04 Development economics and policy are due for a redesign In the past few decades research from across the natural and social sciences has provided stunning insight into the way people think and make decisions Whereas the first generation of development policy was based on the assumption that humans make decisions deliberatively and independently and on the basis of consistent and self interested preferences recent research shows that decision making rarely proceeds this way People think automatically when deciding they usually draw on what comes to mind effortlessly People also think socially social norms guide much of behavior and many people prefer to cooperate as long as others are doing their share And people think with mental models what they perceive and how they interpret it depend on concepts and worldviews drawn from their societies and from shared histories The World Development Report 2015 offers a concrete look at how these insights apply to development policy It shows how a richer view of human behavior can help achieve development goals in many areas including early childhood development household finance productivity health and climate change It also shows how a more subtle view of human behavior provides new tools for interventions Making even minor adjustments to a decision making context designing interventions based on an understanding of social preferences and exposing individuals to new experiences and ways of thinking may enable people to improve their lives The Report opens exciting new avenues for development work It shows that poverty is not simply a state of material deprivation but also a tax on cognitive resources that affects the quality of decision making It emphasizes that all

humans including experts and policy makers are subject to psychological and social influences on thinking and that development organizations could benefit from procedures to improve their own deliberations and decision making It demonstrates the need for more discovery learning and adaptation in policy design and implementation The new approach to development economics has immense promise Its scope of application is vast This Report introduces an important new agenda for the development community
