Green Households Klaas Jan Noorman, Ton Schoot Uiterkamp, 2014-01-14 Households are one of the main sources of waste and of other environmental impacts This is a study of domestic consumption Drawing on empirical research largely from The Netherlands it takes households as consumer units and examines the entire household metabolism This includes the way domestic demand can influence where and how goods and services are produced resource flows through households and the differential impacts of different lifestyles It shows both what would constitute sustainable domestic consumption and how far there is to go to achieve this

Knowledge Acquisition, Modeling and Management Dieter Fensel, Rudi Studer, 1999-05-19 This book constitutes the refereed proceedings of the 11th European Workshop on Knowledge Acquisition Modeling and Management EKAW 99 held at Dagstuhl Castle Germany in May 1999 The volume presents 16 revised full papers and 15 revised short papers were carefully reviewed and selected from a high number of submissions Also included are two invited papers The papers address issues of knowledge acquisition i.e. the process of extracting creating structuring knowledge etc. of knowledge level modeling for knowledge based systems and of applying and redefining this work in a knowledge management and knowledge engineering context

Knowledge Acquisition, Modeling and Management Rudi Studer, 2003-06-29 Past Present and Future of Knowledge Acquisition This book contains the proceedings of the 11th European Workshop on Knowledge

Acquisition Modeling and Management EKAW 99 held at Dagstuhl Castle Germany in May of 1999 This continuity and the high number of missions reflect the mature status of the knowledge acquisition community Knowledge Acquisition started as an attempt to solve the main bottleneck in developing expert systems now called knowledge based systems Acquiring knowledge from a human expert Various methods and tools have been developed to improve this process These approaches significantly reduced the cost of developing knowledge based systems However these systems often only partially fulfilled the task they were developed for and maintenance remained an unsolved problem This required a paradigm shift that views the development process of knowledge based systems as a modeling activity Instead of simply transferring human knowledge into machine readable code building a knowledge based system is now viewed as a modeling activity A so called knowledge model is constructed in interaction with users and experts This model need not necessarily reflect the already available human expertise Instead it should provide a knowledge level characterization of the knowledge that is required by the system to solve the application task Economy and quality in system development and maintainability are achieved by reusable problem solving methods and ontologies The former describe the reasoning process of the knowledge based system i.e. the algorithms it uses and the latter describe the knowledge structures it uses i.e. the data structures Both abstract from specific application and domain specific circumstances to enable knowledge reuse

Analytical Family Demography Robert Schoen, 2018-09-12 In this book new mathematical and statistical techniques that permit more sophisticated analysis are refined and applied to questions of current concern in order to understand the forces that are driving the recent dramatic changes in family patterns The areas examined include the impact of the evolving Second Demographic Transition where complex patterns of gender dynamics and social change are re-orienting family life New analyses of marriage cohabitation union dynamics and union dissolution provide a fresh look at the changing family life cycle emerging patterns of partner choice and the impact of union dissolution on the life course The demography of kinship is explored and the importance of parity progression to the generation of the kinship web is highlighted The methodology of population projections by family status is examined and new results presented that demonstrate how recognizing family status advances long term policy objectives especially with regard to children and the elderly This book applies up to date methods to examine the demography of the family and will be of value to sociologists demographers and all those who are interested in the family

Population Issues Leo J.G. van Wissen, Pearl A. Dykstra, 2012-12-06 This volume marks the end of an eight year program of research on population issues launched in 1990 by the Netherlands Organization for Scientific Research The NWO Priority Program on Population Issues Initiatives for this program of research were taken over ten years ago by Hans Van Ginkel who became the first program chair and Dirk Van De Kaa The Dutch community of population scientists is deeply indebted to them for their early efforts At the time the program carried the name Between Individual Development and Social Solidarity Population and Society in a Period of Transition The goals of the Priority Program were threefold To reduce the fragmentation of research on population

issues to increase collaboration among population researchers with different disciplinary backgrounds and to strengthen the position of population studies in Dutch academe and in international forums Looking back over eight years of programmed research we can safely say that the Priority Program has given an enormous impetus to population research in the Netherlands as this volume attests This program of research could not have been carried out successfully without the valuable contributions and constructive input of a large group of scientists The scope and the focus of the Priority Program were defined by a preparatory committee chaired by Gerard Frinking

Tables charts and other non text features are widespread Each chapter contains at least 30 bibliographic citations

Innovations in Travel Demand Modeling: Papers, 2008 The 31 individual authored papers from the breakout sessions are contained in Volume 2 Pub desc Family History Revisited Richard Wall, Tamara K. Hareven, Josef Ehmer, 2001 This collection of original essays by scholars on the historical study of the family from various parts of the world represent a new departure in this field The essays cover a great variety of topics and many countries are represented The essays open up new debates and point to new directions in the field by examining dimensions of family relations that had not been sufficiently addressed in previous scholarship *Urban Simulation Modeling* Jakub Vorel, 2015-01-01 This book *Urban Simulation Modeling An Introduction and Experimental Applications in the Czech Republic* provides readers with a review of basic urban simulation modeling methodology and discusses the constraints and potentials of its application in the Czech Republic The first part of the book elaborates on eleven distinct urban simulation models with the aim of illustrating the basic theoretical and methodological approaches to urban simulation modeling The analysis of the models focuses on the way the models represent essential urban entities and processes with the primary objective to make the assumptions on which the models are based more explicit Special emphasis is placed on the behavioral content of the models The first part concludes with a discussion of the potential use of the models for policy analysis In the second part of the book several experimental simulation models illustrate the potentials and limits of the micro simulation modeling of the most essential urban processes and provide methodological and technical guidance for their development and implementation in the Czech Republic

Ontology, Epistemology, and Teleology for Modeling and Simulation Andreas Tolk, 2012-08-10 In this book internationally recognized experts in philosophy of science computer science and modeling and simulation are contributing to the discussion on how ontology epistemology and teleology will contribute to enable the next generation of intelligent modeling and simulation applications It is well understood that a simulation can provide the technical means to display the behavior of a system over time including following observed trends to predict future possible states but how reliable and trustworthy are such predictions The questions about what we can know ontology how we gain new knowledge epistemology and what we do with this knowledge teleology are therefore illuminated from these very different perspectives as each experts uses a different facet to look at these challenges The result of bringing these perspectives into one book is a challenging compendium that gives room for a spectrum of challenges from general philosophy questions such as can we use modeling and simulation and other computational means at all to discover new knowledge down to computational methods to improve semantic interoperability between systems or methods addressing how to apply the recent insights of service oriented approaches to support distributed artificial intelligence As such this book has been compiled as an entry point to new domains for students scholars and practitioners and to raise the curiosity in them to learn more to fully address the topics of ontology epistemology and teleology from philosophical computational and conceptual viewpoints The

Biodemography of Subsistence Farming James W. Wood, 2020-04-23 Viewing the subsistence farm as primarily a demographic enterprise to create and support a family this book offers an integrated view of the demography and ecology of preindustrial farming Taking an interdisciplinary perspective it examines how traditional farming practices interact with demographic processes such as childbearing death and family formation It includes topics such as household nutrition physiological work capacity health and resistance to infectious diseases as well as reproductive performance and mortality The book argues that the farming household is the most informative scale at which to study the biodemography and physiological ecology of preindustrial non commercial agriculture It offers a balanced appraisal of the farming system considering its strengths and limitations as well as the implications of viewing it as a demographic enterprise rather than an economic one A valuable resource for graduate students and researchers in biological and physical anthropology cultural anthropology natural resource management agriculture and ecology

The Oxford Handbook of Early Modern European History, 1350-1750 Hamish Scott, 2015-07-23 This Handbook re examines the concept of early modern history in a European and global context The term early modern has been familiar especially in Anglophone scholarship for four decades and is securely established in teaching research and scholarly publishing More recently however the unity implied in the notion has fragmented while the usefulness and even the validity of the term and the historical periodisation which it incorporates have been questioned The Oxford Handbook of Early Modern European History 1350 1750 provides an account of the development of the subject during the past half century but primarily offers an integrated and comprehensive survey of present knowledge together with some suggestions as to how the field is developing It aims both to interrogate the notion of early modernity itself and to survey early modern Europe as an established field of study The overriding aim will be to establish that early modern is not simply a chronological label but possesses a substantive integrity Volume I examines Peoples and Place assessing structural factors such as climate printing and the revolution in information social and economic developments and religion including chapters on Orthodoxy Judaism and Islam

Social Security, Household, and Family Dynamics in Ageing Societies Jean-Pierre Gonnnot, Nico Keilman, Christopher Prinz, 2012-12-06 Many industrialized countries are facing large problems with their public pension systems in the 21st century An unfavourable age distribution with lower population shares in working ages and increasing shares and numbers of elderly persons in the future will lead under current pension systems to a drop in contributions and at the same time to sharply rising amounts of benefits paid This book analyzes the impact of dynamics in age structure and marital status composition on future public pension expenditures in twelve industrialized countries It shows that there is no demographic response to population ageing at the horizon 2030 Neither an increase in fertility nor an inflow of migrants can rejuvenate national populations unless fertility and or migration reach unrealistically high levels Therefore the overall conclusion of this book is that demographic variables are of limited help to relieve the burden of future public pension expenditures Substantial reductions of the public pension burden have to be

sought in socioeconomic measures and not in adjusting demographic conditions The book includes various demographic and pension scenarios for pension costs in the coming decades for Austria Canada the Czech and Slovak Republics Finland France Germany Hungary Italy the Netherlands Norway Poland and Sweden Not only old age pensions but also disability and survivor pensions have been investigated Variant projections were calculated for changes in demographic labour force and pension system variables In addition separate case studies for three countries deal with a pension system in Austria in which benefits depend on the number children ever born the impact of household dynamics on social security in the Netherlands not just marriage and marriage dissolution and with the consequences of economic growth for public pensions in Sweden

Agent-based Modeling and Simulation in Archaeology Gabriel Wurzer, Kerstin Kowarik, Hans

Reschreiter, 2014-11-08 Archaeology has been historically reluctant to embrace the subject of agent based simulation since it was seen as being used to re enact and visualize possible scenarios for a wider generally non scientific audience based on scarce and fuzzy data Furthermore modeling in exact terms and programming as a means for producing agent based simulations were simply beyond the field of the social sciences This situation has changed quite drastically with the advent of the internet age Data it seems is now ubiquitous Researchers have switched from simply collecting data to filtering selecting and deriving insights in a cybernetic manner Agent based simulation is one of the tools used to glean information from highly complex excavation sites according to formalized models capturing essential properties in a highly abstract and yet spatial manner As such the goal of this book is to present an overview of techniques used and work conducted in that field drawing on the experience of practitioners
