Knowledge Management Professor Dr.-Ing. Kai Mertins, Dipl.-Sozw. Peter Heisig, Dipl.-Psych. Jens Vorbeck, 2013-03-14 By Robert C Camp PhD PE Chairman Global Benchmarking Network GBN Best Practice Institute™ Rochester NY USA The perception sharing and adoption of best

practices is mostly attributed to the activity called benchmarking. Obtaining maximum value from best practices is usually attributed to knowledge management. One is an extension of the other. Knowledge management can be looked upon as the management of knowledge about best practices, whether in the mind as human capital or as intellectual assets or property. Most organizations now recognize the absolute imperative for the identification and collection of best practices through benchmarking. It can be a strategic strength when practiced and a fatal weakness if not pursued. But there is a serious disconnection in the exchange and adoption process. Despite significant advances in the approaches and technology that pursue improvement, six sigma, process redesign, customer relationship management, etc., organizations continue to experience great difficulty in successfully transferring leading practices. Some would say these are exemplary, proven, observed, or promising, but in the final analysis they are best practices with the objective of becoming world class. More insight is needed into how leading or best practices are transferred and adopted, said differently, best practices for knowledge transfer or knowledge management.

Knowledge Management (KM) Processes in Organizations Claire McInerney, Michael E.D. Koenig, 2022-06-01

Knowledge Management (KM) is an effort to increase useful knowledge in the organization. It is a natural outgrowth of late twentieth century movements to make organizational management and operations more effective, of higher quality, and more responsive to constituents in a rapidly changing global environment. This document traces the evolution of KM in organizations, summarizing the most influential research and literature in the field. It also presents an overview of selected common and current practices in knowledge management, including the relationship between knowledge management and decision making, with the intention of making a case for KM as a series of processes and not necessarily a manipulation of things. The final section highlights the use of social networking and commonly adopted Web applications to increase the value of social capital and to connect practitioners with clients and colleagues.
