Knowledge Discovery And Data Mining Professional Applications Of Computing Series:

Knowledge Discovery and Data Mining Max A. Bramer, 1999 Considers knowledge discovery which has been defined as the extraction of implicit previously unknown and potentially useful information from data Early chapters examine technical issues of importance to the future development of the field including overcoming feature interaction problems analysis of outliers rule discovery and temporal processing Later chapters describe applications in fields such as medical and health information meteorology organic chemistry and the electric supply industry The editor is a professor of information technology at the University of Portsmouth UK Material originated at a May 1998 colloquium Annotation copyrighted by Book News Inc Portland OR Data Mining and Knowledge Discovery Handbook Oded Maimon, Lior Rokach, 2010-09-10 Knowledge Discovery demonstrates intelligent computing at its best and is the most desirable and interesting end product of Information Technology To be able to discover and to extract knowledge from data is a task that many researchers and practitioners are endeavoring to accomplish There is a lot of hidden knowledge waiting to be discovered this is the challenge created by today's abundance of data Data Mining and Knowledge Discovery Handbook Second Edition organizes the most current concepts theories standards methodologies trends challenges and applications of data mining DM and knowledge discovery in databases KDD into a coherent and unified repository This handbook first surveys then provides comprehensive yet concise algorithmic descriptions of methods including classic methods plus the extensions and novel methods developed recently This volume concludes with in depth descriptions of data mining applications in various interdisciplinary industries including finance marketing medicine biology engineering telecommunications software and security Data Mining and Knowledge Discovery Handbook Second Edition is designed for research scientists libraries and advanced level students in computer science and engineering as a reference This handbook is also suitable for professionals in industry for computing applications information systems management and strategic research management Federation over the Web Klaus P. Jantke, Aran Lunzer, Nicolas Spyrtos, Yuzuru Tanaka, 2006-01-19 The lives of people all around the world especially in industrialized nations continue to be changed by the presence and growth of the Internet Its influence is felt at scales ranging from private lifestyles to national economies boosting the pace at which modern information and communication technologies influence personal choices along with business processes and scientific endeavors In addition to its billions of HTML pages the Web can now be seen as an open repository of computing resources These resources provide access to computational services as well as data repositories through a rapidly growing variety of Web applications and Web services However people's usage of all these resources barely scratches the surface of the possibilities that such richness should offer One simple reason is that given the variety of information available and the rate at which it is being extended it is difficult to keep up with the range of resources relevant to one's interests Another reason is that resources are offered in a bewildering variety of formats and styles so that many resources effectively stand in isolation This is reminiscent of the challenge of enterprise

application integration familiar to every large organization be it in commerce academia or government
The challenge arises because of the accumulation of information and communication systems over decades typically without the technical provision or political will to make them work together Thus the exchange of data among those systems is difficult and expensive and the potential synergetic effects of combining them are never realized **PC AI**, 2001 **Trends and Applications in Knowledge Discovery and Data Mining** Wen-Chih Peng, Haixun Wang, James Bailey, Vincent S.
