Peuquet,2002-06-20 Recent advances in information technology have enabled scientists to generate unprecedented amounts of earth related data with tremendous potential for dealing with pressing social economic and environmental issues Yet the volume and heterogeneity of available data clearly overwhelm traditional analytical approaches as well as the human capacity to derive patterns and useful insights This book examines how geospatial knowledge can be analyzed and represented in a manner that not only is accurate and coherent but also makes intuitive sense to the end user Integrating concepts and approaches from geography computer science cognitive psychology and philosophy Donna J Peuquet explores the processes by which people acquire represent and utilize spatiotemporal knowledge Arguing that the human user and the computer must be viewed as interrelated components of a single system she provides principles and recommendations for improving the design of geographic information systems GIS and other geospatial modeling tools An ideal student text or professional reference this book fills a crucial need in geographic information science Space, Knowledge and Power Stuart Elden,2016-04-01 Michel Foucault s work is rich with implications and insights concerning spatiality and has inspired many geographers and social scientists to develop these ideas in their own research This book the first to engage Foucault s geographies in detail from a wide range of perspectives is framed around his discussions with the French geography journal H rodote in the mid 1970s The opening third of the book comprises some of Foucault s previously untranslated work on

questions of space a range of responses from French and English language commentators and a newly translated essay by Claude Raffestin a leading Swiss geographer The rest of the book presents specially commissioned essays which examine the remarkable reception of Foucault's work in English and French language geography situate Foucault's project historically and provide a series of developments of his work in the contemporary contexts of power biopolitics governmentality and war Contributors include a number of key figures in social spatial theory such as David Harvey Chris Philo Sara Mills Nigel Thrift John Agnew Thomas Flynn and Matthew Hannah Written in an open and engaging tone the contributors discuss just what they find valuable and frustrating about Foucault's geographies This is a book which will both surprise and challenge

Socio-Cybernetic Study of God and the World-System Choudhury, Masudul Alam, 2013-10-31 In any field whether scientific business or social ethics plays a critical role in determining what is acceptable in a particular community and what is considered taboo The source of these preconditions is often a complex interweaving of tradition and rational thought Socio Cybernetic Study of God and the World System investigates morality in a socio scientific worldview examining the epistemology of existence in conjunction with Islamic monotheistic law to generate a world system that governs action and reaction in the context of a variety of cognitive and social environments Readers with backgrounds in finance and economics can utilize this book to construct a more thorough theoretical understanding of their societal and professional associations

On the Nature and Origin of Time, Space, Gravity and Reality Jonathan P. Sumber, DPM, 2016-04-30 This book is an in depth expose of a system of physics in which the atom is integrated within a more inclusive hybrid building block that combines dark energy and electromagnetic energy together within one system of physics that creates all the matter and the spacetime of our universe The nature and the origin of matter space time gravity inertia kinetic energy and even consciousness are explained from within this hybrid system of physics allowing the large scale and the small scale to be unified within it To understand how the universe started out from an event that created the passage of time and three dimensions of space out of a state where time passage and the three dimensions of space did not previously exist we must first come to understand the nature of other levels of order and dimensions that exist beyond the boundaries of our perceived essence This work explores some of those levels of order and dimensionalities that exist outside of our universe while also revealing how these other dimensionalities take part in creating aspects of our universe as well as of our consciousness that we have not yet come to identify If you've wondered how it is that the universe functions as it does on the large scale level within the parameters of time and space as to the provisions of special and general relativity while quantum particles have been shown to disobey many of those laws this work will reveal a system of physics that bridges the gap between the large scale and the small scale as well as between time and space which makes sense out of what had previously seemed to be a paradox

The Theory of the Knowledge Square: The Fuzzy Rational Foundations of the Knowledge-Production Systems Kofi Kissi Dompere, 2012-08-28 The monograph is about a meta theory of knowledge production process and the logical

pathway that connects the epistemic possibility to the epistemic reality It examines the general conditions of paradigms for information processing and isolates the classical and fuzzy paradigms for comparative analysis The sets of conditions that give rise to them are defined stated and analyzed to abstract the corresponding sets of laws of thought The fuzzy paradigm with its corresponding logic and mathematics is related to inexact symbolism for the defective information structure where the results of the knowledge production must satisfy the epistemic conditionality composed of fuzzy conditionality and fuzzy stochastic conditionality under the principle of logical duality with continuum The classical paradigm with its corresponding logic and mathematics is related to exact symbolism for exact information structure where the vagueness component of the defectiveness is assumed away and where the results of the knowledge production must satisfy no epistemic conditionality or at the maximum only the stochastic conditionality under the principle of logical dualism with excluded middle It is argued that the epistemic path that links ontological space to the epistemological space is information The ontological space is taken as the primary category of reality while the epistemological space is shown to be a derivative Such information is universally defective and together with assumptions imposed guides the development of paradigms with their laws of thought logic of reasoning mathematics and computational techniques The relational structure is seen in terms of logical trinity with a given example as matter information energy transformational trinity which is supported by the time trinity of past present future relationality The book is written for professionals researchers and students working in philosophy of science decision choice theories economies sciences computer science engineering cognitive psychology and researchers working on or interested in fuzzy paradigm fuzzy logic fuzzy decisions and phenomena of vagueness and ambiguities fuzzy mathematics fuzzy stochastic processes and theory of knowledge It is further aimed at research institutions and libraries The subject matter belongs to extensive research and development taking place on fuzzy phenomena and the debate between the fuzzy paradigm and the classical paradigm relative to informatics synergetic science and complexity theory The book will have a global appeal and across disciplines Its strength besides the contents is the special effort that is undertaken to make it relevant and accessible to different areas of sciences and knowledge production What is to be done?
