Fenland Its Ancient Past And Uncertain Future:

Fenland, its ancient past and uncertain future Harry Godwin, 1978 *Fenland* Harry Godwin, 2009-03-19 The features so characteristic of the Fenland its flatness its flooding its vast stretches of silt land and black peat its drainage channels meres buried forests abundant water fowl and aquatic plants its special crops all relate to the special conditions in which the Fenland was formed and ultimately was taken over by man This is the story by one of the active participants of how the researches of natural scientists biologists geologists geographers historians and archaeologists over the last fifty years have by active co operation and the use of modern techniques reconstructed Fenland history through the last 10 000 years and have provided fresh understanding both of its ancient past and its uncertain future It is the only such synthesis for either specialist or general reader in a hundred years and it is written in simple non technical language and fully illustrated both by photographs and drawings *Fenland Nature* Duncan Poyser, Simon Stirrup, 2025-05-06 This book showcases the natural history and landscape of the Fens an area now responsible for a third of Britain s food production and worth over 3 billion to the economy every year It describes the geology and geography across the Fenland Basin over the last 14 000 years a period dominated by the flux of wetlands and movement of water The human relationship with this landscape is traced through history from Mesolithic hunters to the prosperity of a medieval economy based on the currency of eels through the taming and draining of the vast wetlands to modern farming on an industrial scale While recognising that only a fraction of the Fens is left *Fenland Nature* celebrates the breadth of wildlife still to be found in the region from vast flocks of visiting wildfowl in the winter months to rare and specialised plants and insects all illustrated with detailed and evocative photographs The book concludes by contemplating an uncertain future where there are possibilities for a sustainable agricultural industry alongside increasing biodiversity requiring new ways of thinking and working with the land The fenland landscape is a microcosm of the huge global challenges caused by habitat loss ecological degradation and climate change If solutions can be found to these complex issues in the Fens then there is hope that these can also apply to similar places across the world [Fenland Waterways](#) , 2024-11-26 This guide to the Middle Level waterways that lie between the River Great Ouse and River Nene including the main link route via March and several other alternatives gives all the information needed for anyone planning to navigate the area Shaped by human ingenuity and home to a rich variety of nature the serene and stunning landscapes of the Fenland waterways are more remote than most of the rest of the country s network of navigable inland waters In this lies their beauty and much of their attraction However they also have sufficient access to facilities Readers will find a wealth of information about moorings facilities and services as well as features of interest to canoeists paddleboarders walkers and other users of the waterways It includes detailed mapping for each section of the rivers as well as overview plans Imray s popular inland waterways guides are being revised with experienced boat owners and navigators from the Inland Waterways Association With a completely new design and maps that have been rescaled and

reoriented to make them more user friendly this new Fenland Waterways guide has been written by Chris Howes Deputy National Chairman Eastern Region Chairman and Peterborough Branch Chairman of the IWA Chris is a knowledgeable enthusiast for the area and his navigation notes are enriched with narrative and photographs highlighting numerous points of interest The Ecology of Patterned Boreal Peatlands of Northern Minnesota Paul H. Glaser,1987 Understanding

Wetlands S. M. Haslam,2003-08-15 Wetlands are an important and sadly diminishing habitat in many parts of the world They contribute significantly to the planet s biodiversity housing thousands of species of plants and animals Increasingly human management is required to sustain and even create these fragile ecosystems while global changes in climate are also taking their toll **The End of Roman Britain** Michael E. Jones,1998 Jones offers a lucid and thorough analysis of the economic

social military and environmental problems that contributed to the failure of the Romans drawing on literary sources and on recent archaeological evidence **European Mires** Peter D. Moore,2013-09-11 European Mires brings together in a single volume the various ideas and approaches to the classification and nomenclature of mire types set out in a single language namely English It provides a set of clear explanations of how ecologists view their mires in different parts of Europe In addition each account provides a summary and a survey of relevant literature in a variety of languages which should prove of great value to English speaking students of mire systems The book contains nine chapters and begins with a discussion of the classification of mires in Europe This is followed by separate chapters on Finnish mires types Estonian bogs the mire types of the German Democratic Republic and the vegetation and development of Central European mires Subsequent chapters deal with the vegetation and development of blanket mires British fens Welsh mires and wetland communities in Ireland It is hoped that this present volume will assist in the dismantling of some international barriers and will provide a basis for further work It may also help foster a global climate of scientific understanding in such a way as to permit the recrudescence of international mire research **Farming the North Sea Coast, 900-2000** Piet van Cruyningen,2025-04 The author

opens a powerful dialogue between agricultural history on the one hand and environmental history on the other a brilliant and provocative synthesis of a thousand years of coastal farming Tim Soens University of Antwerp Belgium The fascinating story of how the North Sea coast has been farmed is ever changing Long before the industrial revolution the inhospitable fens and marshes of the low lying coastal wetlands on both sides of the Sea had been transformed into one of the most productive agricultural regions in Europe Agriculture in the coastlands reached its apogee during the eighteenth and nineteenth centuries as is witnessed by the many impressive farm buildings established then However more recently it has become clear that lowland farming and even the physical existence of the lowlands are in jeopardy owing to rising sea levels and problems of drainage This book offers a history of farming and water management on the North Sea coast assessing the forces driving and inhibiting agricultural progress more broadly It examines the ways in which farmers in the past dealt with the two main constraints on their decision making the natural environment and the human environment of institutional rules

and customs regulating behaviour It looks in particular at how setbacks were overcome and how farming practices were improved which then raised the money with which to finance the maintenance of dykes canals and sluices **Biogeography** C. Barry Cox, Richard J. Ladle, Peter D. Moore, 2020-01-07 Through nine successful editions and for over 45 years *Biogeography An Ecological and Evolutionary Approach* has provided a thorough and comprehensive exploration of the varied scientific disciplines and research that are essential to understanding the subject The text noted for its clear and engaging style of writing has been praised for its solid background in historical biogeography and basic biology that is enhanced and illuminated by discussions of current research This new edition incorporates the exciting changes of the recent years and presents a thoughtful exploration of the research and controversies that have transformed our understanding of the biogeography of the world New themes and topics in this tenth edition include Next generation genetic technologies and their use in historical biogeography phylogeography and population genomics Biogeographical databases and biodiversity information systems which are becoming increasingly important for biogeographical research An introduction to functional biogeography and its applications to community assembly diversity gradients and the analysis of ecosystem functioning Updated case studies focusing on island biogeography using the latest phylogenetic studies *Biogeography An Ecological and Evolutionary Approach* reveals how the patterns of life that we see today have been created by the two great Engines of the Planet the Geological Engine plate tectonics which alters the conditions of life on the planet and the Biological Engine evolution which responds to these changes by creating new forms and patterns of life *The Oxford Handbook of Wetland Archaeology* Francesco Menotti, Aidan O'Sullivan, 2012-12-20 *The Oxford Handbook of Wetland Archaeology* is the most comprehensive survey of global wetland archaeology ever published Well known for the spectacular quality of its surviving evidence from both an archaeological and environmental perspective wetland archaeology enables scholars to investigate and reconstruct past people's dwellings landscapes material culture and daily lives in great detail Through concise essays written by some of the world's leading scholars in the field this Handbook describes the key principles methodologies and revealing results of past and present archaeological investigations of wetland environments The volume provides unique insights into past human interactions with lakes bogs rivers and coastal marshlands across the world from prehistory to modern times Opening with a detailed introduction by the editors the Handbook is divided into seven parts and contains 54 essays and over 230 photographs figures maps and graphs *Infant Mortality: A Continuing Social Problem* Eilidh Garrett, Chris Galley, Nicola Shelton, Robert Woods, 2018-02-06 In 1906 Sir George Newman's *Infant Mortality A Social Problem* one of the most important health studies of the twentieth century was published To commemorate this anniversary this volume brings together an interdisciplinary team of leading academics to evaluate Newman's critical contribution to review current understandings of the history of infant and early childhood mortality especially in Britain and to discuss modern approaches to infant health as a continuing social problem The volume argues that even after 100 years of health

programmes scientific advances and medical interventions early childhood mortality is still a significant social problem and it also proposes new ways of defining and tracking the problem of persistent mortality differentials

Between the Atlantic and the Mediterranean: Responses to Climate and Weather Conditions throughout History Ian D. Rotherham (eds), Cristina Joanaz de Melo, Ana Isabel Queiroz, Luís Espinha da Silveira, 2013

Between the Atlantic and the Mediterranean brings together a set of case studies on living organisms adaptation to the evolution of the climate and adjustments to extreme weather conditions Aiming to go beyond concerns about recent and forthcoming climate change which have dominated research in environmental studies this book adopts a long term perspective on adaptations and adjustments to nature Although an important group of papers deal with the Portuguese territory and the Iberian Peninsula in which a complex mosaic of Atlantic and Mediterranean climates helped to shape landscapes and history the book has a broader geographical scope from England to Italy Contributions look at the distribution and numbers of animal species and material social cultural and religious responses to weather in the short term and to climate in the long term The common ground is the reaction of living organisms to natural hazards In the long term these are cyclical and nowadays predictable

Biogeography James Allan Taylor, 1984-01-01

Biogeography has been one of the great growth areas in geography in recent years with much new research work and many new developments taking place This book presents an authoritative up to date international review of all the major biogeographical themes The chapters define each theme and its place within biogeography and consider the methods of study adopted Each chapter then assesses recent trends and the latest state of the art and concludes by examining where future developments are likely Many case studies and examples are provided from throughout the world including North America

Britain's Political Economies Julian Hoppit, 2017-05-03

The Glorious Revolution of 1688-9 transformed the role of parliament in Britain and its empire Large numbers of statutes resulted with most concerning economic activity Julian Hoppit here provides the first comprehensive account of these acts revealing how government affected economic life in this critical period prior to the Industrial Revolution and how economic interests across Britain used legislative authority for their own benefit Through a series of case studies he shows how ideas interests and information influenced statutory action in practice Existing frameworks such as mercantilism and the fiscal military state fail to capture the full richness and structural limitations of how political power influenced Britain's precocious economic development in the period Instead finely grained statutory action was the norm guided more by present needs than any grand plan with regulatory ambitions constrained by administrative limitations and some parts of Britain benefiting much more than others

Fen and Sea I.G. Simmons, 2021-12-22

Renowned environmental historian I G Simmons synthesizes detailed research into the landscape history of the coastal area of Lincolnshire between Boston and Skegness and its hinterland of Tofts Low Grounds and Fen as far as the Wolds With many excellent illustrations Simmons chronicles the ways in which this low coast backed by a wet fen has been managed to display a set of landscapes which have significant

differences that contradict the common terminology of uniformity calling the area flat or referring to everywhere from Cleethorpes to King's Lynn as the fens. These usually labeled flat areas of East Lincolnshire between Mablethorpe and Boston are in fact a mosaic of subtly different landscapes. They have become that way largely due to the human influences derived from agriculture and industry. Between the beginning of Norman rule and the advent of pumped drainage a number of significant changes took place. The author has accumulated information from Roman times until the beginnings of fossil fuel powered drainage bringing together both scientific data and documentary evidence including medieval and early modern documents from the National Archive, Lincolnshire Archives, Bethlem Hospital and Magdalen College Oxford to explore the little known archives of regional interest.

Norfolk 2 Nikolaus Pevsner, Bill Wilson, 2002-01-01 This second volume on Norfolk provides a comprehensive survey from prehistoric times to the present day. The 17th and 18th century treasures of King's Lynn are explored as well as the market towns of Swaffham and Wymondham. Castle remains and medieval churches are also explored.

Norfolk 1 Nikolaus Pevsner, Bill Wilson, 2002-01-01 Norfolk 1 Norwich and North East and its companion Norfolk 2 North West and South aim to provide a lively and uniquely comprehensive survey of the architectural treasures of Norfolk. Extensively revised and expanded, these new editions of Sir Nikolaus Pevsner's original volumes bring together the latest research on a county which has some of the most attractive buildings in England. The gazetteer is enhanced by an introduction which provides a perceptive overview of the region's architectural inheritance and is illustrated by numerous text figures, maps and 130 photographs, many specially commissioned. Pre-eminent in this volume is the city of Norwich, rich in major buildings of outstanding quality from Norman cathedral and castle to twentieth century city hall and university. Supreme among the ports described in this volume is the medieval walled town of Great Yarmouth, whose highly individual history and buildings are here examined in detail for the first time. There are also full descriptions of many appealing market towns whilst the rest of the county is revealed through succinct accounts of its parish churches and less well known buildings. Abbey ruins, brick eighteenth century farmhouses and estate cottages in quiet inland villages contrast with coastal fishing settlements and resorts. Great barns testify to the significance of agriculture. Country houses range from the magnificent Jacobean Blickling Hall to seaside extravaganzas by Lutyens. Detailed indexes make this not only an essential reference book but also a guide book for anyone interested in the rich region of Norfolk.

Wetland Archaeology and Beyond Francesco Menotti, 2012-03-15 Wetland Archaeology and Beyond offers an appreciative study of the people and their artefacts who occupied a large variety of worldwide wetland archaeological sites. The volume also includes a comprehensive explanation of the processes involved in archaeological practice and theory.

Making One's Way in the World Martin Bell, 2020-02-28 The book draws on the evidence of landscape archaeology, palaeoenvironmental studies, ethnohistory and animal tracking to address the neglected topic of how we identify and interpret past patterns of movement in the landscape. It challenges the pessimism of previous generations which regarded prehistoric routes such as hollow ways as generally

undatable The premise is that archaeologists tend to focus on sites while neglecting the patterns of habitual movement that made them part of living landscapes Evidence of past movement is considered in a multi scalar way from the individual footprint to the long distance path including the traces created in vegetation by animal and human movement It is argued that routes may be perpetuated over long timescales creating landscape structures which influence the activities of subsequent generations In other instances radical changes of axes of communication and landscape structures provide evidence of upheaval and social change Palaeoenvironmental and ethnohistorical evidence from the American North West coast sets the scene with evidence for the effects of burning animal movement faeces deposition and transplantation which can create readable routes along which are favoured resources Evidence from European hunter gatherer sites hints at similar practices of niche construction on a range of spatial scales On a local scale footprints help to establish axes of movement the locations of lost settlements and activity areas Wood trackways likewise provide evidence of favoured patterns of movement and past settlement location Among early farming communities alignments of burial mounds enclosure entrances and other monuments indicate axes of communication From the middle Bronze Age in Europe there is more clearly defined evidence of trackways flanked by ditches and fields Landscape scale survey and excavation enables the dating of trackways using spatial relationships with dated features and many examples indicate long term continuity of routeways Where fields flank routeways a range of methods including scientific approaches provide dates Prehistorians have often assumed that Ridgeways provided the main axes of early movement but there is little evidence for their early origins and rather better evidence for early routes crossing topography and providing connections between different environmental zones The book concludes with a case study of the Weald of South East England which demonstrates that some axes of cross topographic movement used as droeways and generally considered as early medieval can be shown to be of prehistoric origin One reason that dryland routes have proved difficult to recognise is that insufficient attention has been paid to the parts played by riverine and maritime longer distance communication It is argued that understanding the origins of the paths we use today contributes to appreciation of the distinctive qualities of landscapes Appreciation will help to bring about effective strategies for conservation of mutual benefit to people and wildlife by maintaining and enhancing corridors of connectivity between different landscape zones including fragmented nature reserves and valued places In these ways an understanding of past routeways can contribute to sustainable landscapes communities and quality of life
