Against the Ethicists Sextus (Empiricus.), 1997 About Sextus Sextus Empiricus is one of the most important ancient philosophical writers after Plato and Aristotle His writings are our main source for the doctrines and arguments of Scepticism He probably lived in the second century AD Eleven books of his writings have survived covering logic physics ethics and numerous more specialized fields About *Against the Ethicists* In this unjustly neglected and misunderstood work Sextus sets out a distinctive Sceptic position in ethics He discusses the concepts good and bad and puts forward the sceptical argument that nothing is either good or bad by nature or intrinsically or invariably but only relatively to persons and or to circumstances He then argues that the sceptic is better off than the non sceptic In the latter part of the book Sextus attacks the Stoic view that there is such a thing as a skill for life About this edition This volume contains a translation of *Against the Ethicists* in clear modern English together with an introduction and a detailed commentary Those who have discussed this work in the past have tended to underestimate it often regarding its main position as essentially the same as that of Sextus better known *Outlines of Pyrrhonism* Richard Bett shows that *Against the Ethicists* represents quite a distinct and coherent philosophical outlook associated with a phase of Scepticism earlier than Sextus himself an outlook of which little other evidence survives

Resources in Education ,2000-04 *18th and 19th Century Porcelain Analysis* Howell G. M. Edwards, 2020-07-13 This book addresses the contributions made by analytical chemistry to the characterisation of 18th and early 19th Century English and Welsh porcelains commencing with the earliest reports of Sir Arthur Church and of Herbert Eccles and Bernard Rackham using chemical digestion techniques and concluding with the most recent instrumental experiments which together span more than a hundred years of study From the earliest experiments which required necessarily the sacrifice of significant portions of each specimen which may already have been damaged to the latest experiments which needed only microsampling or the non-destructive interrogation of valuable perfect specimens a comprehensive survey is undertaken of more than twenty manufactories of quality porcelains The correlation is made between the quantitative elemental oxide determinations of the scanning electron microscopic diffraction and X-ray fluorescence data and the qualitative molecular spectroscopic Raman data to demonstrate their complementarity and use in the holistic forensic assessment of the origin of

the fired porcelains this will form the groundwork for the adoption of analytical techniques for the attribution of unknown or questionable porcelains to their potential source factories The book will also examine the perception of what constitutes a porcelain and its definitions and examines the assignment of porcelains to types which currently employs the definitions of hard paste soft paste hybrid magnesian and bone china from the conclusions derived from the analytical data and a consideration of the raw materials employed in their manufacturing processes During the discussion of this analytical evidence several themes and protocols have been established for its utilisation in the potential identification of porcelains and several case studies undertaken for this purpose are cited The book will be of interest to analytical scientists to museum ceramics curators and to ceramics historians *Federal Register* ,1976 **Swansea and Nantgarw Porcelains** Howell G.M. Edwards,2017-03-27 This book describes a holistic study of the porcelain manufactured at Nantgarw and Swansea in the first quarter of the 19th Century using both scientific analytical data and historical provenancing This porcelain is acclaimed as some of the finest and most translucent porcelain ever produced These two porcelain factories are linked through the artistic and creative activities of the enigmatic William Billingsley and had a strictly limited production over only three or four years during the period 1812 1820 The earliest chemical analysis of these porcelains were undertaken almost 100 years ago and are compared with the results of more recent analyses The chemical composition of these porcelains their artistic decoration and the struggle to maintain quality production is reviewed Scientific explanations are proposed for the characteristic Swansea duck egg porcelain translucency and for the Nantgarw iridescence The book is well illustrated throughout and affords a good basis for the further in depth study of Swansea and Nantgarw porcelains Intervention Research in Educational Practice Hermann Astleitner,2020 Improving learning and teaching at schools or universities may start with choosing evidence based interventions and practices but does not end there To ensure sustainable changes to programs in educational practice interventions need to address complex issues related to theories research designs and measurements This book presents typical but often overlooked problems in intervention research in educational practice These problems are embedded in various educational areas such as amongst others school effectiveness instructional design or motivational aspects of teacher trainings Principles of Sugar Technology Pieter Honig,2013-10-22 Principles of Sugar Technology focuses on the principles methodologies and processes involved in sugar technology including properties of sugar and agents involved in its manufacture The selection first offers information on the chemical and physical properties of sucrose as well as decomposition structure of the sucrose molecule sucrose derivatives crystallized and amorphous sucrose and solvents The book then takes a look at the physical and chemical properties of reducing sugars and non nitrogenous organic acids of sugarcane The publication ponders on nitrogen containing nonsugars amino acids and proteins complex organic nonsugars of high molecular weight and lipids of sugarcane Discussions focus on the distribution of nitrogen in sugarcane amino acids in cane juice and leaves lignin pectin proteins and significance of waxy and fatty lipids in sugar

manufacture The text also examines color and colored nonsugars inorganic nonsugars and agents used in sugar manufacture The selection is a dependable reference for readers interested in sugar technology

Nantgarw and Swansea Porcelains Howell G.M. Edwards, 2018-04-30 This book gives a detailed account of the holistic research carried out on the analytical data obtained historically on the products of the Nantgarw and Swansea porcelain manufactories which existed for a few years only during the second decade of the 19th Century A background to the establishment of the two factories which are linked through the persons of the enigmatic William Billingsley and his kiln manager Samuel Walker involves the sourcing of their raw materials and problems associated with the manufacture and distribution of the finished products A description of the minerals and additives used in porcelain production is recounted to set the scene for the critical evaluation of the comprehensive analytical

data which have been published on Nantgarw and Swansea porcelains For the first time the author has adopted a nondestructive technique Raman spectroscopy to interrogate perfect samples of Nantgarw and Swansea porcelain as well as a selection of shards from an archaeological excavation carried out at a waste dump at the Nantgarw China Works site Following these experiments several questions relating to the porcelain bodies of Swansea and Nantgarw china can be answered and a protocol established for the preliminary evaluation of items of suspect attribution to confirm or not the correctness of their assignment to these Welsh porcelain factories
