Jane's World Railways, 1987-88 Geoffrey Freeman Allen, 1987-10 **Increasing the Productivity of the Nation's Urban Transportation Infrastructure** John F. Kain, 1992 **Transport for Suburbia** Paul Mees, 2009-12 The need for effective public transport is greater than ever in the 21st century With countries like China and India moving towards mass automobility we face the prospects of an environmental and urban health disaster unless alternatives are found It is time to move beyond the automobile age But while public transport has worked well in the dense cores of some big cities the problem is that most residents of developed countries now live in dispersed suburbs and smaller cities and towns These places usually have little or no public transport and most transport commentators have given up on the task of changing this it all seems too hard This book argues that the secret of European style public transport lies in a generalizable model of network planning that has worked in places as diverse as rural Switzerland the Brazilian city of Curitiba and the Canadian cities of Toronto and Vancouver It shows how this model can be adapted to suburban exurban and even rural areas to provide a genuine alternative to the car and outlines the governance funding and service planning policies that underpin the success of the world's best public transport systems **Computer-Aided Transit Scheduling** Martin Desrochers, Jean-Marc Rousseau, 2012-12-06 This volume consists of papers presented at the Fifth International Workshop on Computer Aided Scheduling of Public Transport which was held in Montreal from August 19th to the 23rd 1990 Since the first Workshop in Chicago in 1975 the field had matured considerably In 1975 there were no presentations that described systems which had been implemented and used on a regular basis By 1980 in Leeds and certainly by 1983 in Montreal several systems were in regular use They were based on both heuristics and mathematical programming techniques In 1990 there were more than one hundred transit companies using computer aided scheduling tools in their regular operations The scope of the Workshop was broadened in 1987 in Hamburg so that topics related to scheduling may be introduced We find for example in this book several papers on the technology related to the collection of data and or the data bases required for scheduling and planning activities **The Crisis of London** Andy Thornley, 2003-09-02 London is in a mess This is evident from the increasingly unpleasant experience of daily life in the capital from homelessness and unemployment to frustrating transport facilities and

the general bad quality of the environment However it is not only citizens of London who are suffering but the business community as well London is having to face increasing competition from other European cities There is growing appreciation and debate about these problems from companies political parties local government and community organisations The Crisis of London provides a solid analysis of what has gone wrong and explores policy directions that could make the city a more humane and livable place Beginning with a discussion of the basic elements of a home a job and a means of travelling around it becomes clear that even in these essential aspects London is failing A feature of the crisis is an increasingly divided city with conditions for the poorer citizens worsening all the time The authors consider the quality of the environment They examine the greening of the city and the need for sustainability the privatisation and dehumanisation of public spaces the fear experienced by women denying them full access to the capital the position of ethnic minorities and the perspectives of local communities Using the case studies of Docklands and Kings Cross the author s raise the crucial question of the government of the capital This review of the city concludes with an analysis of a potential vision for London involving both the creation of the necessary institutional structures and also the will to address the needs of all the capital s citizens The authors argue that a strategic approach is needed which accepts that the market alone cannot solve the problem Stronger public intervention and government action is necessary if London is to match the developments in other European cities

Urban Mass Transit Robert C. Post, 2006-11-30 This volume in the Greenwood Technographies series covers urban mass transit that is the technologies that allow cities to move large numbers of people around Just a few hundred years ago the size of cities was limited by the time it took people to move from one part of the city to another The development of successive technologies has forever altered the urban landscape From horse drawn omnibuses to subways to current light rail this volume highlights the technological and social struggles that have accompanied urbanization and the need for an efficient and cost effective means of transportation in cities *JFK International Airport Light Rail System*, 1997 **Route 168, Route 180 to Temperance Ave**, 1993 *Urban Transport Working Group, Second United Nations Transport and Communications Decade (UNTACDA II) Strategy Paper* Richard Barrett, 1991 **Provision of Travelway Space for Urban Public Transport in Developing Countries**, 1993 **Times of India Illustrated Weekly**, 1988-10 *722 Miles* Clifton Hood, 2004-08-23 When it first opened on October 27 1904 the New York City subway ran twenty two miles from City Hall to 145th Street and Lenox Avenue the longest stretch ever built at one time From that initial route through the completion of the IND or Independent Subway line in the 1940s the subway grew to cover 722 miles long enough to reach from New York to Chicago In this definitive history Clifton Hood traces the complex and fascinating story of the New York City subway system one of the urban engineering marvels of the twentieth century For the subway s centennial the author supplies a new foreward explaining that now after a century we can see more clearly than ever that this rapid transit system is among the twentieth century s greatest urban achievements *Transportation Journal*, 1988 *Transportation, Bibliography of GAO*

Driving Forces James A. Dunn,2010-12-01 To its critics the automobile is a voracious consumer of irreplaceable energy resources a leading polluter of the environment and a destroyer of cohesive communities The most outspoken opponents call for greater regulations and restrictions to ultimately replace the automobile as the country s primary means of transportation But their proposals all ignore one simple fact Americans love their cars Millions of citizens have made the automobile the most successful method of mass transportation ever developed and they are not about to give up the personal mobility it offers This book presents the controversial view that for the vast majority of Americans the automobile is not the problem but the solution to transportation needs While acknowledging the automobile s significant drawbacks the author refutes much of the shrill rhetoric and doomsday predictions of its opponents He takes a skeptical look at the major policy initiatives to tax regulate and provide alternatives to the automobile pointing out that any policies designed to remove Americans from their cars without offering them a superior means of mobility are worse than useless and doomed to failure The book offers suggestions and guidelines for politically realistic initiatives that preserve the benefits of the automobile while building public support for policies that will reduce its negative effects on energy use and the environment

The Urban Wisdom of Jane Jacobs Jane Jacobs,Sonia Hirt,Diane L. Zahm,2012 Here for the first time is a thoroughly interdisciplinary and international examination of Jane Jacobs s legacy Divided into four parts I Jacobs Urban Philosopher II Jacobs Urban Economist II Jacobs Urban Sociologist and IV Jacobs Urban Designer the book evaluates the impact of Jacobs s writings and activism on the city the professions dedicated to city building and more generally on human thought Together the editors and contributors highlight the notion that Jacobs s influence goes beyond planning to philosophy economics sociology and design They set out to answer such questions as What explains Jacobs s lasting appeal and is it justified Where was she right and where was she wrong What were the most important themes she addressed And although Jacobs was best known for her work on cities is it correct to say that she was a much broader thinker a philosopher and that the key to her lasting legacy is precisely her exceptional breadth of thought
