**The Case of the Killer Robot** Richard G. Epstein, 1997 Using the case of an industrial accident involving a killer robot the author successfully combines technical and ethical concepts to present to students and professionals real life issues that they may one day have to confront

**Killer Robots** Armin Krishnan, 2016-04-22 Military robots and other potentially autonomous robotic systems such as unmanned combat air vehicles UCAVs and unmanned ground vehicles UGVs could soon be introduced to the battlefield Look further into the future and we may see autonomous micro and nanorobots armed and deployed in swarms of thousands or even millions This growing automation of warfare may come to represent a major discontinuity in the history of warfare humans will first be removed from the battlefield and may one day even be largely excluded from the decision cycle in future high tech and high speed robotic warfare Although the current technological issues will no doubt be overcome the greatest obstacles to automated weapons on the battlefield are likely to be legal and ethical concerns Armin Krishnan explores the technological legal and ethical issues connected to combat robotics examining both the opportunities and limitations of autonomous weapons He also proposes solutions to the future regulation of military robotics through international law

*Projects in the Computing Curriculum* Michael Holcombe, Andrew F. Stratton, Sally A. Fincher, Gary Griffiths, 2012-12-06 Dr Peter Milton Director of Programme Review Quality Assurance Agency I am grateful to the authors for giving me the opportunity to write this foreword mainly because it represents the first occasion that the Fund for the Development of Teaching and Learning FDTL has led directly to a publication such as this In my former capacity as Director of Quality Assessment at the Higher Education Funding Council for England HEFCE I chaired the FDTL Committee during 1996-7 and am delighted to see the projects which were selected so painstakingly leading to successful outcomes

Assessment of the quality of higher education HE was introduced in 1993 and was intended to improve public information about what was on offer in British universities and colleges as well as to assist in the enhancement of educational opportunities for students This was part of a larger agenda in which educational quality and the standards achieved by students have come under increasing scrutiny with a long term objective of linking funding allocations to the quality of the provision It was in this context that the FDTL Initiative was launched in 1995 to support projects aimed at stimulating developments in teaching and learning and to encourage the dissemination of good practice across the HE sector Good practice is identified through the process of quality assessment and bids for funding can only be made by those institutions which have demonstrated high quality provision To date the programme includes 63 projects drawn from 23 subject areas

British Special Projects Bill Rose, 2021-01-28 An insight into British ambitious and often unrealistic aspirations to stay at the forefront of advanced technology such as the development of the atomic powered warplane The world's first military flying wing was a British design that saw operational service during the First World War A manned rocket ship launched from a converted V bomber was proposed capable of reaching the edge of space Beautifully illustrated with many rare and

unpublished photographs Of interest to aviation and military historians modellers gamers and flight simulator enthusiasts Flying wings deltas and tailless aircraft continue to generate enormous interest within the aviation community and many of the older designs still look surprisingly futuristic British Special Projects Flying Wings Deltas and Tailless Designs examines the lesser known and frequently secret British projects undertaken for research or military purposes during the last century and also covers those aircraft that were built and in some cases entered service The first commercially successful British flying wing biplane designed by John Dunne undertook limited military reconnaissance duties during the First World War Various flying wings followed but the German development of the delta would prove massively influential with post war British aerodynamicists immediately recognising the potential for a new generation of high performance designs Parallel research into advanced flying wings would produce plans for the superb looking Barnes Wallace supersonic swing wing bomber although his design was too far ahead of its time to progress any further There were also dead end projects for bombers powered by atomic propulsion vertical take off concepts and over ambitious ideas for British spacecraft that utilised delta and blended wing bodies but were too technically challenging and costly to develop further Nevertheless many of these designs that stemmed from the simple flying wing remain influential today The Superpower Project Paul

### **Pioneers in Machinima: The Grassroots of Virtual**

**Production** Tracy G. Harwood, Ben Grussi, 2021-09-07 This important new work focuses on the pioneers in machinima considered to be the grassroots and beginnings of virtual production. Machinima's impacts are identified by the community supplemented by Harwood and Grussi's research and experience over a period of 25 years from game film and filmmaking to digital arts practice, creative technologies developments and related research and theory. Machinima is the first digital cultural practice to have emerged from the internet into a mainstream creative genre. Its latest transformation is evident through the increasing convergence of games and film where real time virtual production as a professional creative practice is resulting in new forms of machine generated interactive experiences. Using the most culturally significant machinima works, machine cinema as lenses to trace its history and impacts, *Pioneers in Machinima: The Grassroots of Virtual Production* provides in depth testimony by filmmakers and others involved in its emergence. The extensive reference to source materials and interviews bring the story of its impacts up to date through the critical reflections of the early pioneers. This book will be of interest to machinima researchers and practitioners including game culture media theorists, students of film studies and game studies, digital artists and those interested in how creative technologies have influenced communities of practice over time.

Robots Won't Save Japan James Adrian Wright, 2023-02-15 Robots Won't Save Japan addresses the Japanese government's efforts to develop care robots in response to the challenges of an aging population rising demand for eldercare and a critical shortage of care workers Drawing on ethnographic research at key sites of Japanese robot development and implementation James Wright reveals how such devices are likely to transform the practices organization meanings and ethics of caregiving if implemented at scale This new form of techno welfare state that Japan is prototyping involves a reconfiguration of care that deskills and devalues care work and reduces opportunities for human social interaction and relationship building Moreover contrary to expectations that care robots will save labor and reduce health care expenditures robots cost more money and require additional human labor to tend to the machines As Wright shows robots alone will not rescue Japan from its care crisis The attempts to implement robot care instead point to the importance of looking beyond such techno fixes to consider how to support rather than undermine the human times spaces and relationships necessary for sustainably cultivating good care

**New Laws of Robotics** Frank Pasquale,2020-10-27 Essential reading for all who have a vested interest in the rise of AI Daryl Li AI Society Thought provoking Explores how we can best try to ensure

that robots work for us rather than against us and proposes a new set of laws to provide a conceptual framework for our thinking on the subject Financial Times Pasquale calls for a society wide reengineering of policy politics economics and labor relations to set technology on a more regulated and egalitarian path Makes a good case for injecting more bureaucracy into our techno dreams if we really want to make the world a better place Wired Pasquale is one of the leading voices on the uneven and often unfair consequences of AI in our society Every policymaker should read this book and seek his counsel Safiya Noble author of Algorithms of Oppression Too many CEOs tell a simple story about the future of work if a machine can do what you do your job will be automated and you will be replaced They envision everyone from doctors to soldiers rendered superfluous by ever more powerful AI Another story is possible In virtually every walk of life robotic systems can make labor more valuable not less Frank Pasquale tells the story of nurses teachers designers and others who partner with technologists rather than meekly serving as data sources for their computerized replacements This cooperation reveals the kind of technological advance that could bring us all better health care education and more while maintaining meaningful work These partnerships also show how law and regulation can promote prosperity for all rather than a zero sum race of humans against machines Policymakers must not allow corporations or engineers alone to answer questions about how far AI should be entrusted to assume tasks once performed by humans or about the optimal mix of robotic and human interaction The kind of automation we get and who benefits from it will depend on myriad small decisions about how to develop AI Pasquale proposes ways to democratize that decision making rather than centralize it in unaccountable firms Sober yet optimistic New Laws of Robotics offers an inspiring vision of technological progress in which human capacities and expertise are the irreplaceable center of an inclusive economy
