Identity Cause And Mind Philosophical Essays:

Identity, Cause, and Mind Sydney Shoemaker, 2003 This is an expanded edition of Sydney Shoemaker's seminal collection of his work on interrelated issues in the philosophy of mind and metaphysics. It reproduces all of the original papers, many of which are now regarded as classics, and includes four papers published since the first edition appeared in 1984. Themes include the nature of self-knowledge and self-reference, personal identity, persistence over time, properties, mental states, and perceptual experience. A number of the papers, including *Self-Reference and Self-Awareness*, *Persons and Their Pasts*, *Causality and Properties*, and *The Inverted Spectrum*, have remained at the centre of discussion of their topics. Several of the essays in the original collection discuss the ways in which causal considerations enter into the individuation of properties, and three of the added essays, *Causal and Metaphysical Necessity*, *Realization and Mental Causation*, and *On What There Are*, deal with related themes. The neo-Lockean view of personal identity presented in *Persons and Their Pasts* is developed with a different emphasis in the added paper *Self and Substance*. *Identity Cause and Mind's* reappearance will be warmly welcomed by scholars and students alike. *Identity, Cause and Mind* Sydney Shoemaker, 1984-09-20 Since the appearance of a widely influential book, *Self-Knowledge and Self-Identity*, Sydney Shoemaker has continued to work on a series of interrelated issues in the philosophy of mind and metaphysics. This volume contains a collection of the most important essays he has published since then. The topics that he deals with here include, among others, the nature of personal and other forms of identity, the relation of time to change, the nature of properties and causality, and the relation between the two, dualism and immortality, and the nature of mental states. All the essays show the same care and precision in argument as the earlier book, but they also reveal a substantial shift in Professor Shoemaker's position to a form of materialism. In fact, a number of papers together constitute what is probably the most subtle and rigorous defence yet of a sophisticated functionalism in the account of the mind.

Philosophy of Mind John Heil, 2004-06-01 *Philosophy of Mind: A Contemporary Introduction* is a comprehensive and accessible survey of main themes, positions, and debates in philosophy of mind. John Heil introduces and discusses the major topics in succinct, user-friendly, self-contained chapters: Cartesian dualism, Descartes's legacy, non-Cartesian dualism, behaviorism, the identity theory, functionalism, the representational theory of mind, qualia, radical interpretation, the intentional stance, eliminativism, property dualism, mind and metaphysics, the mind's place in nature. This revised and updated edition includes expanded chapters on eliminativism, qualia, and the representational theory of mind, and an entirely new chapter on property dualism. There are annotated suggestions for further reading at the end of each chapter, updated to include recent material and internet resources.

All the Power in the World Peter Unger, 2007-11-19 This bold and original work of philosophy presents an exciting new picture of concrete reality. Peter Unger provocatively breaks with what he terms the conservatism of present-day philosophy and returns to central themes from Descartes, Locke, Berkeley, Hume, and Russell. Wiping the slate clean, Unger works from the ground up to formulate a new metaphysic capable

of accommodating our distinctly human perspective He proposes a world with inherently powerful particulars of two basic sorts one mental but not physical the other physical but not mental Whether of one sort or the other each individual possesses powers for determining his or her own course as well as powers for interaction with other individuals It is only a purely mental particular an immaterial soul like yourself that is ever fit for real choosing or for conscious experiencing Rigorously reasoning that the only satisfactory metaphysic is one that situates the physical alongside the non physical Unger carefully explains the genesis of and continual interaction of the two sides of our deeply dualistic world Written in an accessible and entertaining style while advancing philosophical scholarship All the Power in the World takes readers on a philosophical journey into the nature of reality In this riveting intellectual adventure Unger reveals the need for an entirely novel approach to the nature of physical reality and shows how this approach can lead to wholly unexpected possibilities including disembodied human existence for billions of years All the Power in the World returns philosophy to its most ambitious roots in its fearless attempt to answer profoundly difficult human questions about ourselves and our world

Being Known Christopher Peacocke, 1999 Christopher Peacocke examines the problem of knowing whether human beings can really know about the past about what they are thinking about what might be and whether freedom is really possible *Philosophy of Mind: A Contemporary Introduction* John Heil, Professor in the Philosophy-Neuroscience-Psychology Program John Heil, 2012-11-12 This comprehensive textbook written by a leading author in the field provides a survey of mainstream conceptions of the nature of mind accessible to readers with little or no background in philosophy Included are the dualist behaviourist and functionalist accounts of the nature of mind along with a critical assessment of recent trends in the subject The problem of consciousness widely thought to be the chief roadblock to our understanding of the mind is addressed throughout the book and there is also material to interest those with a professional interest in the topic philosophers psychologists and neuroscientists as well as the general reader Unique features of *Philosophy of Mind* provides a comprehensive survey of basic concepts and major theories contains many lucid examples to support ideas cites key literature in annotated suggested reading and a full bibliography contains a full index including the location of key terms and concepts Consciousness and Mind David Rosenthal, 2005-11-17 *Consciousness and Mind* presents David Rosenthal's influential work on the nature of consciousness Central to that work is Rosenthal's higher order thought theory of consciousness according to which a sensation thought or other mental state is conscious if one has a higher order thought HOT that one is in that state The first four essays develop various aspects of that theory The next three essays present Rosenthal's homomorphism theory of mental qualities and qualitative consciousness and show how that theory fits with and helps sustain the HOT theory A crucial feature of homomorphism theory is that it individuates and taxonomizes mental qualities independently of the way we're conscious of them and indeed independently of our being conscious of them at all So the theory accommodates the qualitative character not only of conscious sensations and

perceptions but also of those which fall outside our stream of consciousness Rosenthal argues that because this account of mental qualities makes no appeal to consciousness it enables us to dispel such traditional quandaries as the alleged conceivability of undetectable quality inversion and to disarm various apparent obstacles to explaining qualitative consciousness and understanding its nature Six further essays build on the HOT theory to explain various important features of consciousness among them the complex connections that hold in humans between consciousness and speech the self interpretative aspect of consciousness and the compelling sense we have that consciousness is unified Two of the essays one an extended treatment of homomorphism theory appear here for the first time There is also a substantive introduction which draws out the connections between the essays and highlights their implications **Mental Causation** Anthony Dardis, 2008-09-10 Two thousand years ago Lucretius said that everything is atoms in the void it's physics all the way down Contemporary physicalism agrees But if that's so how can we how can our thoughts emotions our values make anything happen in the physical world This conceptual knot the mental causation problem is the core of the mind body problem closely connected to the problems of free will consciousness and intentionality Anthony Dardis shows how to unravel the knot He traces its early appearance in the history of philosophical inquiry specifically in the work of Plato Aristotle Descartes and T H Huxley He then develops a metaphysical framework for a theory of causation laws of nature and the causal relevance of properties Using this framework Dardis explains how macro or higher level properties can be causally relevant in the same way that microphysical properties are causally relevant by their relationship with the laws of nature Smelling an orange choosing the orange rather than the cheesecake reaching for the one on the left instead of the one on the right mental properties such as these take their place alongside the physical motor of the world in making things happen **Philosophy Of Mind** Paul Gilbert, Kathleen Lennon, 2005-08-04 A welcome introduction to one of the most intellectually demanding areas of the undergraduate philosophy curriculum The authors provide a clear framework within which students can fit contemporary developments in the Anglo American tradition which provide the core themes of philosophy of mind and which connect to their other work in epistemology and philosophy of language *The Oxford Handbook of Philosophy of Mind* Brian McLaughlin, Ansgar Beckermann, Sven Walter, 2009-01-15 This is the most authoritative and comprehensive guide ever published to the state of the art in philosophy of mind a flourishing area of research An outstanding team of contributors offer 45 new critical surveys of a wide range of topics **The Blackwell Guide to Philosophy of Mind** Stephen P. Stich, Ted A. Warfield, 2008-04-15 Comprising a series of specially commissioned chapters by leading scholars this comprehensive volume presents an up to date survey of the central themes in the philosophy of mind It leads the reader through a broad range of topics including Artificial Intelligence Consciousness Dualism Emotions Folk Psychology Free Will Individualism Personal Identity and The Mind Body Problem Provides a state of the art overview of philosophy of mind Contains 16 newly commissioned articles all of which are written by internationally distinguished scholars Each chapter

reviews a central issue examines the current state of the discipline with respect to the topic and discusses possible futures of the field Provides a solid foundation for further study *Authority and Estrangement* Richard Moran,2012-01-06 Since Socrates and through Descartes to the present day the problems of self knowledge have been central to philosophy s understanding of itself Today the idea of first person authority the claim of a distinctive relation each person has toward his or her own mental life has been challenged from a number of directions to the point where many doubt the person bears any distinctive relation to his or her own mental life let alone a privileged one In *Authority and Estrangement* Richard Moran argues for a reconception of the first person and its claims Indeed he writes a more thorough repudiation of the idea of privileged inner observation leads to a deeper appreciation of the systematic differences between self knowledge and the knowledge of others differences that are both irreducible and constitutive of the very concept and life of the person Masterfully blending philosophy of mind and moral psychology Moran develops a view of self knowledge that concentrates on the self as agent rather than spectator He argues that while each person does speak for his own thought and feeling with a distinctive authority that very authority is tied just as much to the disprivileging of the first person to its specific possibilities of alienation Drawing on certain themes from Wittgenstein Sartre and others the book explores the extent to which what we say about ourselves is a matter of discovery or of creation the difficulties and limitations in being objective toward ourselves and the conflicting demands of realism about oneself and responsibility for oneself What emerges is a strikingly original and psychologically nuanced exploration of the contrasting ideals of relations to oneself and relations to others *Mind in Life* Evan Thompson,2010-09-30 Thompson explores the explanatory gap between biological life and consciousness drawing on sources as diverse as molecular biology evolutionary theory artificial life complex systems theory neuroscience psychology Continental Phenomenology and analytic philosophy to show that mind and life are more continuous than previously accepted

Subjectivity ,2016-08-22 Subjectivity is one of the central issues of twentieth century philosophy literature and art Modernism which discovered the subconscious put an end to the belief in the Cartesian Subject as the autonomous centre of knowledge and self consciousness Instead the subject became something uncontrollable unreliable incomplete and fragmentary The attempts to recapture the unity of the subject led to the existential quest and the flight into ideology nazism communism Postmodernism the cultural movement of the second half of the twentieth century did not consider the subject any longer as an important category Attention was focused on the I and the Other on dialogism and polyphonism Bakhtin Ideology lost its appeal and so did the great stories Lyotard In this issue of *Avant Garde Critical Studies* the problem of subjectivity in twentieth century culture is discussed from various angles by specialists in the field of philosophy literature film music and dance **Grazer philosophische Studien** Marc Slors,Sven Walter,2002 **Mind, Language and Action** Danièle Moyal-Sharrock,Volker Munz,Annalisa Coliva,2015-03-10 The volume takes on the much needed task of describing and explaining the nature of the relations and interactions between mind language and action in defining mentality Papers by

renowned philosophers unravel what is increasingly acknowledged to be the enacted nature of the mind memory and language acquisition whilst also calling attention to Wittgenstein's contribution. The volume offers unprecedented insight, clarity, scope and currency.

The Routledge Companion to Philosophy of Psychology Sarah Robins, John Symons, Paco Calvo, 2009-09-11. The Routledge Companion to Philosophy of Psychology is an invaluable guide and major reference source to the major topics, problems, concepts and debates in philosophy of psychology and is the first companion of its kind. A team of renowned international contributors provide forty-two chapters organised into six clear parts: I Historical background to the philosophy of psychology; II Psychological explanation; III Cognition and representation; IV The biological basis of psychology; V Perceptual experience; VI Personhood. The Companion covers key topics such as the origins of experimental psychology, folk psychology, behaviorism and functionalism, philosophy of psychology and neuroscience, the language of thought, modularity, nativism and representational theories of mind, consciousness and the senses, personal identity, the philosophy of psychopathology and dreams, emotion and temporality. Essential reading for all students of philosophy of mind, science and psychology. The Routledge Companion to Philosophy of Psychology will also be of interest to anyone studying psychology and its related disciplines.

Philosophy of Mind: The Key Thinkers Andrew Bailey, 2013-11-21. Exploring what great philosophers have written about the nature of thought and consciousness. *Philosophy of Mind: The Key Thinkers* offers a comprehensive overview of this fascinating field. Thirteen specially commissioned essays written by leading experts introduce and explore the contributions of those philosophers who have shaped the subject and the central issues and arguments therein. The modern debate about the mind was shaped by Descartes in the seventeenth century and then reshaped in the mid-twentieth century and since by exciting developments in science and philosophy. This book concentrates on the development of philosophical views on the mind since Descartes, offering coverage of the leading thinkers in the field including Husserl, Ryle, Lewis, Putnam, Fodor, Davidson, Dennett and the Churchlands. Crucially, the book demonstrates how the ideas and arguments of these key thinkers have contributed to our understanding of the relationship between mind and brain. Ideal for undergraduate students, the book lays the necessary foundations for a complete and thorough understanding of this fascinating subject.

Metaphysics of Consciousness William Seager, 2002-09-11. *Metaphysics of Consciousness* opens with a development of the physicalist outlook that denies the need for any explanation of the mental. This inexplicability is demonstrated not to be sufficient as refutation of physicalism. However, the inescapable particularity of modes of consciousness appears to overpower this minimal physicalism. This book proposes that such an inference requires either a wholly new conception of how consciousness is physical or a deep and disturbing new kind of physical inexplicability.

A Physicalist Manifesto Andrew Melnyk, 2003-10-09. *A Physicalist Manifesto* is a full treatment of the comprehensive physicalist view that in some important sense everything is physical. Andrew Melnyk argues that the view is best formulated by appeal to a carefully worked-out notion of realization rather than supervenience, that so formulated physicalism must be importantly

reductionist that it need not repudiate causal and explanatory claims framed in non physical language and that it has the a posteriori epistemic status of a broad scope scientific hypothesis Two concluding chapters argue in detail that contemporary science provides no significant empirical evidence against physicalism and some considerable evidence for it Written in a brisk candid and exceptionally clear style this 2003 book should appeal to professionals and students in philosophy of mind metaphysics and philosophy of science
