**Comparing Post War Japanese and Finnish Economies and Societies** Yasushi Tanaka, Toshiaki Tamaki, Jari Ojala, Jari Eloranta, 2014-11-13 This book compares two countries with striking parallels in economic and political outcomes yet with some distinct features in terms of institutional structures, relative size and culture. Therefore, this book forms a fruitful platform for the study of the similarities and differences in the economic and societal development of Japan and Finland. Despite their geographic distance from one another and the aforementioned differences, both countries experienced rather similar economic and societal development patterns after the Second World War. The study of these societies, both individually and through commonalities, will provide a unique perspective on the emergence of modern economies and institutions. The book provides comprehensive coverage on issues such as welfare state formation and society security and military spending, education system, industrial development, international trade, governmental economic policies, energy solutions and bubbles and their collapse, thus issues typical for these countries as well as most modern states studied from a longitudinal perspective. The book aims to answer a fundamental question in social science: Why do there seem to be common trends and developmental paths among countries differing in size, culture and economic structure? This book will provide insights for those seeking to decipher how the developments in their own countries came about and where they may be headed to.

**Symposium on U.S.-Pacific Rim Relations**, 1987 *Learning and Innovation in Economic Development* Linsu Kim, 1999-01-01 These essays identify the evolutionary processes and patterns of learning capability building and innovation in catch-up countries. They suggest that such economies have different patterns of learning from those of advanced countries. Kim uses the example of Korea to examine various industries.

**U.S./Japan Foreign Trade** Rita E. Neri, 2018-02-21 This bibliography, first published in 1988, consists of annotated entries of monographs and journal articles published in English that discuss socio-economic aspects of Japanese society as well as the general and economic dynamics of United States-Japan trade relations. Emphasis is on the Japanese perspective.

*Technology Transfer And Development* R. C. Mascarenhas, R. C. Mascarenhas, 2019-08-21 In most Third World nations, importing technology from other countries is considered vital to industrialization and economic development. This book examines the processes of technology transfer and development by tracing how Hindustan Machine Tools, a public enterprise in India, successfully collaborated with manufacturers from industrialized nations in its growth from a single factory to a diversified industrial complex. The author critically analyzes the company's overall strategies for diversification and expansion and its approaches to selecting, acquiring, absorbing and generating technology and to developing appropriate management. He also points to important relationships between policy efficiency and administrative efficiency and discusses socioeconomic and cultural factors that can obstruct the successful development and operation of an industrial enterprise in a developing country.

**Planning for Change** James E. Vestal, 1995-10-26 What has been the role of government industrial policy through agencies such as MITI in Japan's extraordinary post war development How has the role changed in successive phases of growth What lessons can be learned from this experience by other nations be they in the West or developing countries or economies in transition attempting to introduce competitive market structures These are some of the main questions addressed in this absorbing and thorough study Dividing the period into three main phases the author shows that policy played a crucial role in the initial period of post war recovery It did so not by picking winners but by creating a stable base from which development could occur by spreading the cost of introducing market competition over time In the succeeding high growth period and more recently Japan's industrial policy attempts only to promote the development of new technology and smooth the decline of sectors that are no longer globally competitive That Japan itself no longer practises industrial policy on a wide scale is an irony little appreciated by those advocating the adoption of a Japan style industrial policy elsewhere

**The Evolution of the World Economy** Terutomo Ozawa, 2016-03-25 The world economy is near a critical crossroads as a rising China the greatest ever beneficiary of US led

capitalism dreams to replace America's supremacy as a new hegemonic power with a non liberal world order This third volume of the trilogy on reformulating the flying geese theory explains how capitalism has changed industrial structures across the world It asks whether the flying geese formation will survive the changes that have produced the East Asian miracle and as hoped spread to Africa Terutomo Ozawa's reformulated flying geese theory explains structural changes as an innovation driven ratcheting up process of economic growth and shows that market driven multinational corporations are key players for a successful flying geese formation and structural transformation The book argues that the ladder of economic development must be conceived as a double helix with inter and intra industry rungs the latter embedding cross border supply chains and adaptive innovations A thorough exploration of the structural changes under Pax Britannica and Pax Americana moving from kicking away the ladder from emerging economies to then providing it demonstrates that this trend engenders multinational corporations that can facilitate structural transformation particularly in catching up economies Ozawa shows that China is now in the critical transitional period that requires more sophisticated institutional socio political setups as well as more advanced knowledge and ethics to move from the lower to the higher rungs This enlightening accessible and timely conclusion to Ozawa's trilogy will be of great interest to many particularly those specialising in international business economics political science and international relations Academics and practitioners alike will find this an invaluable resource

Amsden, 1989-09-07 South Korea has been quietly growing into a major economic force that is even challenging some Japanese industries This timely book examines South Korean growth as an example of late industrialization a process in which a nation's industries learn from earlier innovator nations rather than innovate themselves Discussing state intervention shop floor management and big business groups Amsden explores the reasons for South Korea's phenomenal growth paying special attention to the principle of reciprocity in which the government imposes strict performance standards on those industries and companies that it aids She thereby shows how South Korea Japan and Taiwan were able to grow faster than other emerging nations such as Brazil Turkey India and Mexico With its new insights Asia's Next Giant is essential reading for anyone concerned with global competition and the world economy

**Competitiveness and American Society** Steven L. Goldman, 1993 The claim that U S industry is in a crisis that it stands at a turning point in its competitiveness with foreign rivals seems on the face of it an objective description of the prevailing state of affairs But what does competitiveness mean when it is used to describe an entire industry an economy

a nation What is the relationship between industrial competitiveness and the personal and social value placed on competition What are the social roots of competition that have made it an enduring American value How does the current competitiveness debate serve special interests seeking to preserve or extend their social power The essays presented in Competitiveness and American Society all written especially for this volume address these and related questions The answers they offer reveal the political character of the competitiveness debate as well as the complexity and ambiguity of the value judgments with which competitiveness issues are entangled The perspectives taken by the authors range from the austere economic through the political and managerial to the richly sociological The opening essay rejects the possibility let alone the factuality of a national competitiveness crisis the closing essay explicitly identifies the root causes of the crisis as national Other essays look to relationships among culture society and industry in the U S and Japan as factors shaping America s competitiveness crisis and the Western European response to that crisis One essay explores mechanisms that would allow the public to play a constructive role in managerial decision making another explores the complications that have followed from mandating the management of resources in accordance with social values The common denominator of all of the essays is an engagement with the role that social value judgments play in determining the competitiveness of individual firms For some this role is broad and definitive for others it is narrowly circumscribed Taken together the essays in Competitiveness and American Society establish the need for wider participation in the debate over the competitiveness of U S industry than has been held so far What is needed is a debate that addresses the quality of American life and the health of the industrial sector of the economy a debate that opens for public deliberation the changes in personal and social values and institutions that will be required to shape that interdependence BOOK JACKET Title Summary field provided by Blackwell North America

Inc All Rights Reserved **Management of Technology and Innovation in Japan** Cornelius Herstatt, Christoph Stockstrom, Hugo Tschirky, Akio Nagahira, 2006-02-23 What Makes this Book Unique No crystal ball is required to safely predict that in the future even more than in the past innovativeness will be a primary criterion distinguishing successful from unsuccessful companies At the latest since Michael Porter s study on the competitiveness of nations the same criterion holds even for the evaluation of entire countries and national economies Despite the innumerable number of publications and recommendations on innovation competitive innovativeness is still a rare competency The latest publication of UNICE the European Industry organization representing 20 million large midsize and small companies speaks a clear language Europe qualifies to roughly 60% 70% of the innovation strength of the US Japan The record unemployment in many EU countries does not contradict this message A main reason may be given by the fact that becoming an innovative organization means increased openness towards the new and more tolerance towards risks and failures both challenging the inherently difficult management art of cultural change Further lacking innovativeness is often related to legal and fiscal barriers which rather hinder than foster innovative activities Yet another reason to explain Europe s notorious innovation gap refers to

insufficient financial R D resources on the company as well as on the national level As a result for example hi ranking decisions on the level of the European Commission are taken to increase R D expenditures in the European Union from roughly 2% to 3% of GNP
