Elliptic Problem Solvers:

Elliptic Problem Solvers Martin H. Schultz, 2014-05-10 *Elliptic Problem Solvers* provides information pertinent to some aspects of the numerical solution of elliptic partial differential equations This book presents the advances in developing elliptic problem solvers and analyzes their performance Organized into 40 chapters this book begins with an overview of the approximate solution of using a standard Galerkin method employing piecewise linear triangular finite elements This text then defines the types of vector architecture and discusses the variation in performance that can occur on a vector processor as a function of algorithm and implementation Other chapters consider the implementation of techniques for elliptical problems This book discusses as well the six techniques for the solution of nonsymmetric linear systems arising from finite difference discretization of the convection diffusion equation The final chapter deals with the basic semiconductor device equations This book is a valuable resource for electrical and computer engineers scientists computer programmers pure mathematicians and research workers *Elliptic Problem Solvers* Garrett Birkhoff, Arthur Schoenstadt, 2014-05-10 *Elliptic Problem Solvers II* covers the proceedings of the Elliptic Problem Solvers Conference held at the Naval Postgraduate School in Monterey California from January 10 to 12 1983 The book focuses on various aspects of the numerical solution of elliptic boundary value problems The selection first offers information on building elliptic problem solvers with ELLPACK presentation and evolution of the club module and a fourth order accurate fast direct method for the Helmholtz equation The text then examines the ITPACK project CMMPAK solving elliptic problems on an array processor system and parallel architectures for iterative methods on adaptive block structured grids Topics include adaptive solution algorithm data structure elliptic problem solvers input data and vector ITPACK The publication ponders on conjugate gradient preconditioners for vector and parallel processors an algebra for systolic computation and an incomplete Cholesky factorization by a matrix partition algorithm The book also tackles the numerical solution of a model equation near the onset of the Rayleigh Benard instability numerical methods for solving coupled semiconductor equations on a minicomputer and analysis of nonlinear elliptic systems arising in reaction diffusion modeling The selection is highly recommended for researchers interested in elliptic problem solvers **Elliptic Problem Solvers Conference** ,1981 *Elliptic Problem Solvers* ,1985 *Algorithms for Elliptic Problems* Marián Vajtersic, 2013-03-09 This volume deals with problems of modern effective algorithms for the numerical solution of the most frequently occurring elliptic partial differential equations From the point of view of implementation attention is paid to algorithms for both classical sequential and parallel computer systems The first two chapters are devoted to fast algorithms for solving the Poisson and biharmonic equation In the third chapter parallel algorithms for model parallel computer systems of the SIMD and MIMD types are described The implementation aspects of parallel algorithms for solving model elliptic boundary value problems are outlined for systems with matrix pipeline and multiprocessor parallel computer architectures A modern and popular multigrid computational

principle which offers a good opportunity for a parallel realization is described in the next chapter More parallel variants based in this idea are presented whereby methods and assignments strategies for hypercube systems are treated in more detail The last chapter presents VLSI designs for solving special tridiagonal linear systems of equations arising from finite difference approximations of elliptic problems For researchers interested in the development and application of fast algorithms for solving elliptic partial differential equations using advanced computer systems

On Some Trends in Elliptic Problem Solvers S. C. Eisenstat, M. H. Schultz, YALE UNIV NEW HAVEN CT DEPT OF COMPUTER SCIENCE., 1981 Elliptic boundary value problems are at the core of many systems of partial differential equations occurring in mechanics Examples of applications include fluid dynamics semiconductor device modelling and structural analysis Thus it is important to have efficient and robust elliptic problem solvers In this paper we discuss some of the issues involved in the design of a high technology elliptic problem solver In particular we will concentrate our attention on the design of a modular heterogeneous multi processor elliptic problem solver consisting of a host computer and one or more peripheral processors

Solving Elliptic Problems Using ELLPACK John R. Rice, Ronald F. Boisvert, 2012-12-06 ELLPACK is a many faceted system for solving elliptic partial differential equations It is a forerunner of the very high level problem solving environments or expert systems that will become common in the next decade While it is still far removed from the goals of the future it is also far advanced compared to the Fortran library approach in common current use Many people will find ELLPACK an easy way to solve simple or moderately complex elliptic problems Others will be able to solve really hard problems by digging a little deeper into ELLPACK ELLPACK is a research tool for the study of numerical methods for solving elliptic problems Its original purpose was for the evaluation and comparison of numerical software for elliptic problems Simple examples of this use are given in Chapters 9-11 The general conclusion is that there are many ways to solve most elliptic problems there are large differences in their efficiency and the most common ways are often less efficient sometimes dramatically so

Wohlmuth, 2012-12-06 Domain decomposition methods provide powerful and flexible tools for the numerical approximation of partial differential equations arising in the modeling of many interesting applications in science and engineering This book deals with discretization techniques on non matching triangulations and iterative solvers with particular emphasis on mortar finite elements Schwarz methods and multigrid techniques New results on non standard situations as mortar methods based on dual basis functions and vector field discretizations are analyzed and illustrated by numerical results The role of trace theorems harmonic extensions dual norms and weak interface conditions is emphasized Although the original idea was used successfully more than a hundred years ago these methods are relatively new for the numerical approximation The possibilities of high performance computations and the interest in large scale problems have led to an increased research activity Multigrid Methods James H Bramble, 2019-01-22 Multigrid methods are among the most efficient iterative methods for the solution of linear systems which arise in many large scale scientific calculations Every researcher working with the numerical solution of partial differential equations should at least be familiar with this powerful technique This invaluable book presents results concerning the rates of convergence of multigrid iterations *Intelligent Mathematical Software Systems* E.N. Houstis, R. Vichnevetsky, J.R. Rice, 1990-07-03 Most of the well known mathematical software systems are batch oriented though in the past few years there have been attempts to incorporate knowledge or expertise into these systems A number of developments have helped in making the systems more

powerful and user friendly algorithm parameter selection for the solution of well defined mathematical engineering problems parallel computing computer graphics technology interface development tools and of course the years of experience with these systems and the increase in available computing power have made it practical to fulfill the potential seen in the early years of their development This book covers four main areas of the subject Application Oriented Expert Systems Advisory Systems Knowledge Manipulation Issues and User Interfaces

Selected Papers on Algebra and Topology by Garrett Birkhoff J.S. Oliveira,G.-C. Rota,1987-01-01 The present volume of reprints are what I consider to be my most interesting and influential papers on algebra and topology To tie them together and to place them in context I have supplemented them by a series of brief essays sketching their historieal background as I see it In addition to these I have listed some subsequent papers by others which have further developed some of my key ideas The papers on universal algebra lattice theory and general topology collected in the present volume concern ideas which have become familiar to all working mathematicians It may be helpful to make them readily accessible in one volume I have tried in the introduction to each part to state the most significant features of ea ch paper reprinted there and to indieate later developments The background that shaped and stimulated my early work on universal algebra lattice theory and topology may be of some interest As a Harvard undergraduate in 1928 32 I was encouraged to do independent reading and to write an original thesis My tutorial reading included de la Vallee Poussin s beautiful Cours d Analyse Infinitesimale Hausdorff s Grundz ge der Mengenlehre and Frechet s Espaces Abstraits In addition I discovered Caratheodory s 1912 paper Vber das lineare Mass von Punktmengen and Hausdorff s 1919 paper on Dimension und Ausseres Mass and derived much inspiration from them A fragment of my thesis analyzing axiom systems for separable metrizable spaces was later published 2 This background led to the work summarized in Part IV
