presents reviews of different areas of optoelectronics written by international experts in the field covering most of the topics of recent importance. It includes detailed discussions on semiconductor lasers and optical amplifiers, optical fiber transmission, photodetectors, optoelectronic and photonic integrated circuits, light wave telecommunications, optical signal and image processing, optical computing, nonlinear and integrated optics, space time Fourier optics, optical metrology and sensing and optical interconnects. All chapters are written in the style of a textbook containing tutorial sections which should be of great use to graduate students. The volume should serve as an excellent book for graduate level course on optoelectronics, modern optical engineering and optical communications.
