is the result of a collaborative effort by his friends students and admirers Rota was one of the great thinkers of our times innovator in both mathematics and phenomenology I feel moved yet touched by a sense of sadness in presenting this volume of work despite the fear that I may be unworthy of the task that befalls me Rota both the scientist and the man was marked by a generosity that knew no bounds His ideas opened wide the horizons of fields of research permitting an astonishing number of students from all over the globe to become enthusiastically involved The contagious energy with which he demonstrated his tremendous mental capacity always proved fresh and inspiring Beyond his renown as gifted scientist what was particularly striking in Gian Carlo Rota was his ability to appreciate the diverse intellectual capacities of those before him and to adapt his communications accordingly This human sense complemented by his acute appreciation of the importance of the individual acted as a catalyst in bringing forth the very best in each one of his students Whosoever was fortunate enough to enjoy Gian Carlo Rota's longstanding friendship was most enriched by the experience both mathematically and philosophically and had occasion to appreciate son cote de bon vivant The book opens with a heartfelt piece by Henry Crapo in which he meticulously pieces together what Gian Carlo Rota's untimely demise has bequeathed to science

High-Level System Modeling Ronald Waxman,Jean-Michel Bergé,Oz Levia,Jacques Rouillard,2012-12-06 In system design generation of high level abstract models that can be closely associated with evolving lower level models provides designers with the ability to incrementally test an evolving design against a model of a specification Such high level models may deal with areas such as performance reliability availability maintainability and system safety Abstract models also allow

exploration of the hardware versus software design space in an incremental fashion as a fuller detailed design unfolds leaving behind the old practice of hardware software binding too early in the design process Such models may also allow the inclusion of non functional aspects of design e g space power heat in a simulatable information model dealing with the system s operation This book addresses Model Generation and Application specifically in the following domains Specification modeling linking object data modeling behavior modeling and activity modeling Operational specification modeling modeling the way the system is supposed to operate from a user s viewpoint Linking non functional parameters with specification models Hybrid modeling linking performance and functional elements Application of high level modeling to hardware software approaches Mathematical analysis techniques related to the modeling approaches Reliability modeling Applications of High Level Modeling Reducing High Level Modeling to Practice High Level System Modeling Specification and Design Methodologies describes the latest research and practice in the modeling of electronic systems and as such is an important update for all researchers design engineers and technical managers working in design automation and circuit design
