**The Life Informatic** Dominic Boyer, 2013-04-26 News journalism is in the midst of radical transformation brought about by the spread of digital information and communication technology and the rise of neoliberalism What does it look like however from the inside of a news organization In *The Life Informatic* Dominic Boyer offers the first anthropological ethnography of contemporary office based news journalism The result is a fascinating account of journalists struggling to maintain their expertise and authority even as they find their principles and skills profoundly challenged by ever more complex and fast moving streams of information Boyer conducted his fieldwork inside three news organizations in Germany a world leader in digital journalism supplemented by extensive interviews in the United States His findings challenge popular and scholarly images of journalists as roving truth seekers showing instead the extent to which sedentary office based screenwork such as gathering and processing information online has come to dominate news journalism To explain this phenomenon Boyer puts forth the notion of digital liberalism a powerful convergence of technological and ideological forces over the past two decades that has rebalanced electronic mediation from the radial or broadcast tendencies of the mid twentieth century to the lateral or peer to peer tendencies that dominate in the era of the Internet and social media Under digital liberalism an entire regime of media knowledge and authority has become integrated around liberal principles of individuality and publicity both unmaking and remaking news institutions of the broadcast era Finally Boyer offers some scenarios for how news journalism will develop in the future and discusses how other intellectual professionals such as ethnographers have also become more screenworkers than fieldworkers

Red Plenty Francis Spufford, 2012-02-14 Spufford cunningly maps out a literary genre of his own Freewheeling and fabulous *The Times* London

Strange as it may seem the gray oppressive USSR was founded on a fairy tale It was built on the twentieth century magic called the planned economy which was going to gush forth an abundance of good things that the lands of capitalism could never match And just for a little while in the heady years of the late 1950s the magic seemed to be working Red Plenty is about that moment in history and how it came and how it went away about the brief era when under the rash leadership of Khrushchev the Soviet Union looked forward to a future of rich communists and envious capitalists when Moscow would out glitter Manhattan and every Lada would be better engineered than a Porsche It s about the scientists who did their genuinely brilliant best to make the dream come true to give the tyranny its happy ending Red Plenty is history it s fiction it s as ambitious as Sputnik as uncompromising as an Aeroflot flight attendant and as different from what you were expecting as a glass of Soviet champagne

**Imaginary Futures** Richard Barbrook, 2007-04-20 This book is a history of the future It shows how our contemporary understanding of the Internet is shaped by visions of the future that were put together in the 1950s and 1960s At the height of the Cold War the Americans invented the only working model of communism in human history the Internet Yet for all of its libertarian potential the goal of this hi tech project was geopolitical dominance the ownership of time was control over the destiny of humanity The potentially subversive theory of cybernetics was transformed into the military friendly project of artificial intelligence Capitalist growth became the fastest route to the information society The rest of the world was expected to follow America s path into the networked future Today we re still being told that the Internet is creating the information society and that America today is everywhere else tomorrow Thankfully at the beginning of the twenty first century the DIY ethic of the Internet shows that people can resist these authoritarian prophecies by shaping information technologies in their

own interest Ultimately if we don't want the future to be what it used to be we must invent our own improved and truly revolutionary future
