World Scientific Reference On Plasmonic Nanomaterials: Principles, Design And Bio-applications (In 5 Volumes) ,2022-03-04 World Scientific Reference on Plasmonic Nanomaterials Principles Design and Bio applications is a book collection that encompasses multiple aspects of the exciting and timely field of nanoplasmonics under the coordination of international plasmonic nanomaterials expert Dr Luis Liz Marz n Plasmonics has a long history from stained glass in ancient cathedrals through pioneering investigations by Michael Faraday all the way into the nanotechnology era where it blossomed into an extremely active field of research with potential applications in a wide variety of technologies Given the breadth of the materials phenomena and applications related to plasmonics this Reference Set offers a collection of chapters within dedicated volumes focusing on the description of selected phenomena with an emphasis in chemistry as an enabling tool for the fabrication of often sophisticated plasmonic nanoarchitectures and biomedicine as the target application Basic principles of surface plasmon resonances are described as well as those mechanisms related to related phenomena such as surface enhanced spectroscopies or plasmonic chirality Under the guidance of theoretical models wet chemistry methods have been implemented toward the synthesis of a wide variety of nanoparticles with different compositions and tailored morphology But often the optimal nanoarchitecture requires post synthesis treatments including functionalization of nanoparticle surfaces application of external stimuli toward self assembly into well defined supraparticle structures and so called supercrystals All such nanomaterials can find applications in various biomedical aspects most often in relation to diagnosis through either the detection of disease biomarkers at extremely low concentrations or the design of bioimaging methods for in vivo monitoring Additionally novel therapeutic tools can also profit from plasmonic nanomaterials such as photothermal therapy or nanocatalysis The reference set thus offers comprehensive information of an extremely active subset within the world of plasmonic nanomaterials and their applications which aims at not just collecting existing knowledge but also promoting further research and technology transfer into the market and the clinic Proceedings of the Munich Symposium on Lightweight Design 2022 Jasper Rieser,Felix Endress,Alexander Horoschenkoff,Philipp Höfer,Tobias Dickhut,Markus Zimmermann,2023-09-09 Every year the Technical University of Munich the Universit t der Bundeswehr M nchen and the University of Applied Sciences in Munich invite researchers and practitioners to join the Munich Symposium on Lightweight Design Experts from industry and academia discuss design tools applications and new developments Topics include e g composite structures SHM microstructures material modelling design for additive manufacturing numerical optimization and in particular topology optimization in aerospace automotive and other industries The talks are summarized in short articles and presented in this volume *Processing and Fabrication of Advanced Materials, Volume 1* Ajay Kumar,T. S. Srivatsan,Mamilla Ravi Sankar,N. Venkaiah,S. Seetharamu,2024-10-05 This book presents select proceedings of the

International Conference on Processing and Fabrication of Advanced Materials PFAM 2023 It covers the latest research in the areas of processing fabrication characterization and evaluation of traditional advanced and emerging materials The topics covered include various properties and performance attributes of modern age materials It further covers their applications in areas such as aerospace and other space related industries automobile marine and defense biomedical and healthcare electronics and communications energy storage harvesting heavy equipment machinery and goods and semiconductor materials manufacturing The book is a valuable reference for researchers and professionals interested in processing and fabrication of advanced materials and allied fields

Deployable Multimodal Machine Intelligence

Hongliang Ren, 2023-02-04 This book highlights the principles design and characterization of mechanically compliant soft and foldable robots Traditional rigid robots with bulky footprints and complicated components prolong the design iteration and optimization for keyhole and minimally invasive transluminal applications Therefore there is an interest in developing soft and foldable robots with remote actuation multimodal sensing and machine intelligence This book discusses the use of foldable and cuttable structures to design biomimetic deployable soft robots that can exhibit a fair number of motions with consistency and repeatability It presents the overall design principles methodology instrumentation metamorphic sensing multi modal perception and machine intelligence for creating untethered foldable active structures These robotic structures can generate a variety of motions such as wave induction compression inchworm peristalsis flipping tumbling walking swimming flexion extension etc Remote actuation can control motions along regular and irregular surfaces from proximal sides For self deployable medical robots motion diversity and shape reconfiguration are crucial factors Deployable robots with the use of malleable and resilient smart actuators hold this crucial advantage over their conventional rigid robot counterparts Such flexible structures capable of being compressed and expanded with intelligence perceptions hold enormous potential in biomedical applications
