Linear Programming in Industry: Theory and Applications; an Introduction Sven Dano, 1972 *International economic review*, 1961 *Introduction to the Theory and Application of Data Envelopment Analysis* Emmanuel Thanassoulis, 2013-06-29 1 DATA ENVELOPMENT ANALYSIS Data Envelopment Analysis DEA was initially developed as a method for assessing the comparative efficiencies of organisational units such as the branches of a bank schools hospital departments or restaurants The key in each case is that they perform feature which makes the units comparable the same function in terms of the kinds of resource they use and the types of output they produce For example all bank branches to be compared would typically use staff and capital assets to effect income generating activities such as advancing loans selling financial products and carrying out banking transactions on behalf of their clients The efficiencies assessed in this context by DEA are intended to reflect the scope for resource conservation at the unit being assessed without detriment to its outputs or alternatively the scope for output augmentation without additional resources The efficiencies assessed are comparative or relative because they reflect scope for resource conservation or output augmentation at one unit relative to other comparable benchmark units rather than in some absolute sense We resort to relative rather than absolute efficiencies because in most practical contexts we lack sufficient information to derive the superior measures of absolute efficiency DEA was initiated by Charnes Cooper and Rhodes in 1978 in their seminal paper Charnes et al 1978 The paper operationalised and extended by means of linear programming production economics concepts of empirical efficiency put forth some twenty years earlier by Farrell 1957 **CME**, 1974 *14th International Conference on Theory and Application of Fuzzy Systems and Soft Computing - ICAFS-2020* Rafik A. College of Engineering,1978 **Fuzzy Preference Ordering of Interval Numbers in Decision Problems** Atanu Sengupta,Tapan Kumar Pal,2009-02-24 In conventional mathematical programming coefficients of problems are usually determined by the experts as crisp values in terms of classical mathematical reasoning But in reality in an imprecise and uncertain environment it will be utmost unrealistic to assume that the knowledge and representation of an expert can come in a precise way The wider objective of the book is to study different real decision situations where problems are defined in inexact environment Inexactness are mainly generated in two ways 1 due to imprecise perception and knowledge of the human expert followed by vague representation of knowledge as a DM 2 due to huge ness and complexity of relations and data structure in the definition of the problem situation We use interval numbers to specify inexact or imprecise or uncertain data Consequently the study of a decision problem requires answering the following initial questions How should we compare and define preference ordering between two intervals interpret and deal inequality relations involving interval coefficients interpret and make way towards the goal of the decision problem The present research work consists of two closely related fields approaches towards defining a generalized preference ordering scheme for interval attributes and approaches to deal with some issues having application potential in many areas of decision making **Modern Management Based on Big Data III** A.J. Tallón-Ballesteros,2022-09-29 Data is the basic ingredient of all Big Data applications and Big Data technologies are constantly deploying new strategies to maximise efficiency and reduce the time taken to process information This book presents the proceedings of MMBD2022 the third edition of the conference series Modern Management based on Big Data MMBD The conference was originally scheduled to take place from 15 to 18 August 2022 in Seoul South Korea but was changed to a virtual event on the same dates Some 200 submissions were received for presentation at the conference 52 of which were ultimately accepted after exhaustive review by members of the programme committee and peer reviewers who took into account the breadth and depth of the research topics and the scope of MMBD Topics covered include data analytics modelling technologies and visualization architectures for parallel processing systems data mining tools and techniques machine learning algorithms and big data for engineering applications There are also papers covering modern management including topics such as strategy decision making manufacturing and logistics based systems engineering economy information systems and law based information treatment and papers from a special session covering big data in manufacturing retail healthcare accounting banking education global trading and e commerce Big data analysis and emerging applications were popular topics The book includes many innovative and original ideas as well as results of general significance all supported by clear and rigorous reasoning and compelling evidence and methods and will be of interest to all those working with Big Data Data Envelopment Analysis: Theory, Methodology, and Applications Abraham Charnes,William W. Cooper,Arie Y. Lewin,Lawrence M. Seiford,2013-12-01 This book represents a milestone in the

progression of Data Envelopment Analysis DEA It is the first reference text which includes a comprehensive review and comparative discussion of the basic DEA models The development is anchored in a unified mathematical and graphical treatment and includes the most important modeling extensions In addition this is the first book that addresses the actual process of conducting DEA analyses including combining DEA and 1 parametric techniques The book has three other distinctive features It traces the applications driven evolution and diffusion of DEA models and extensions across disciplinary boundaries It includes a comprehensive bibliography to serve as a source of references as well as a platform for further developments And finally the power of DEA analysis is demonstrated through fifteen novel applications which should serve as an inspiration for future applications and extensions of the methodology The origin of this book was a Conference on New Uses of DEA in 2 Management and Public Policy which was held at the IC Institute of the University of Texas at Austin on September 27-29 1989 The conference was made possible through NSF Grant SES 8722504 A Charnes and 2 W W Cooper co PIs and the support of the IC Institute

Robustness Analysis in Decision Aiding, Optimization, and Analytics Michael Doumpos, Constantin Zopounidis, Evangelos Grigoroudis, 2016-07-12 This book provides a broad coverage of the recent advances in robustness analysis in decision aiding optimization and analytics It offers a comprehensive illustration of the challenges that robustness raises in different operations research and management science OR MS

contexts and the methodologies proposed from multiple perspectives. Aside from covering recent methodological developments, this volume also features applications of robust techniques in engineering and management, thus illustrating the robustness issues raised in real world problems and their resolution within advances in OR/MS methodologies. Robustness analysis seeks to address issues by promoting solutions which are acceptable under a wide set of hypotheses, assumptions, and estimates. In OR/MS, robustness has been mostly viewed in the context of optimization under uncertainty. Several scholars, however, have emphasized the multiple facets of robustness analysis in a broader OR/MS perspective that goes beyond the traditional framework, seeking to cover the decision support nature of OR/MS methodologies as well. As new challenges emerge in a big data era where the information volume, speed of flow, and complexity increase rapidly, and analytics play a fundamental role for strategic and operational decision making at a global level, robustness issues such as the ones covered in this book become more relevant than ever for providing sound decision support through more powerful analytic tools.
