Linear Programming And Related Techniques:

Linear Programming and Related Techniques C. Van de Panne, 1971 *Linear Programming and Related Techniques* Cornelis Van De Panne, 1976 *Linear Programming and Network Flows* Mokhtar S. Bazaraa, John J. Jarvis, Hanif D. Sherali, 2011-09-28 The authoritative guide to modeling and solving complex problems with linear programming extensively revised expanded and updated The only book to treat both linear programming techniques and network flows under one cover *Linear Programming and Network Flows* Fourth Edition has been completely updated with the latest developments on the topic This new edition continues to successfully emphasize modeling concepts the design and analysis of algorithms and implementation strategies for problems in a variety of fields including industrial engineering management science operations research computer science and mathematics The book begins with basic results on linear algebra and convex analysis and a geometrically motivated study of the structure of polyhedral sets is provided Subsequent chapters include coverage of cycling in the simplex method interior point methods and sensitivity and parametric analysis Newly added topics in the Fourth Edition include The cycling phenomenon in linear programming and the geometry of cycling Duality relationships with cycling Elaboration on stable factorizations and implementation strategies Stabilized column generation and acceleration of Benders and Dantzig Wolfe decomposition methods Line search and dual ascent ideas for the out of kilter algorithm Heap implementation comments negative cost circuit insights and additional convergence analyses for shortest path problems The authors present concepts and techniques that are illustrated by numerical examples along with insights complete with detailed mathematical analysis and justification An emphasis is placed on providing geometric viewpoints and economic interpretations as well as strengthening the understanding of the fundamental ideas Each chapter is accompanied by Notes and References sections that provide historical developments in addition to current and future trends Updated exercises allow readers to test their comprehension of the presented material and extensive references provide resources for further study *Linear Programming and Network Flows* Fourth Edition is an excellent book for linear programming and network flow courses at the upper undergraduate and graduate levels It is also a valuable resource for applied scientists who would like to refresh their understanding of linear programming and network flow techniques

Fuzzy Linear Programming: Solution Techniques and Applications Seyed Hadi Nasseri, Ali Ebrahimnejad, Bing-Yuan Cao, 2019-05-29 This book presents the necessary and essential backgrounds of fuzzy set theory and linear programming particularly a broad range of common Fuzzy Linear Programming FLP models and related convenient solution techniques These models and methods belong to three common classes of fuzzy linear programming namely i FLP problems in which all coefficients are fuzzy numbers ii FLP problems in which the right hand side vectors and the decision variables are fuzzy numbers and iii FLP problems in which the cost coefficients the right hand side vectors and the decision variables are fuzzy numbers The book essentially generalizes the well known solution algorithms used in linear programming

to the fuzzy environment Accordingly it can be used not only as a textbook teaching material or reference book for undergraduate and graduate students in courses on applied mathematics computer science management science industrial engineering artificial intelligence fuzzy information processes and operations research but can also serve as a reference book for researchers in these fields especially those engaged in optimization and soft computing For textbook purposes it also includes simple and illustrative examples to help readers who are new to the field Linear Programming and Associated Techniques Vera Riley, Saul I. Integer Programming and Related Areas C. Kastning, 2013-11-11 Integer Programming is one of the most fascinating and difficult areas in the field of Mathematical Optimization Due to this fact notable research contributions to Integer Programming have been made in very different branches of mathematics and its applications Since these publications are scattered over many journals proceedings volumes monographs and working papers a comprehensive bibliography of all these sources is a helpful tool even for specialists in this field I initiated this compilation of literature in 1970 at the Institut für Konometrie und Operations Research University of Bonn Since then many collaborators have contributed to and worked on it Among them Dipl Math Claus Kastning has done the bulk of the work With great perseverance and diligence he has gathered all the material and checked it with the original sources The main aim was to incorporate rare and not easily accessible sources like Russian journals preprints or unpublished papers Without the invaluable and dedicated engagement of Claus Kastning the bibliography would never have reached this final version For this reason he must be considered its responsible editor As with any other collection this literature list has a subjective viewpoint and may be in some sense incomplete We have however tried to be as complete as possible The bibliography contains 4704 different publications by 6767 authors which were classified by 11839 descriptor entries **Multiple Criteria And Multiple Constraint Levels**

Linear Programming: Concepts, Techniques And Applications Yong Shi, 2001-06-28 This book introduces multiple criteria and multiple constraint levels linear programming MC2LP which is an extension of linear programming LP and multiple criteria linear programming MCLP In the last decade the author and a group of researchers from the USA China Korea Germany and Hungary have been working on the theory and applications of MC2LP problems This volume integrates their main research results ranging from theoretical bases to broad areas of real world applications The theoretical bases include the formulation of MC2LP integer MC2LP and MC2 transportation model fuzzy MC2LP and fuzzy duality of MC2LP optimal system designs and contingency plans MC2 decision support system and MC2 computer software development The application areas are accounting management information systems production planning and telecommunications management The book serves as a seminar text for both undergraduates and graduates who have a linear algebra or equivalent background For practitioners it will help in handling LP type problems in multiple decision making environment
