In Search of the Virtual Class Lalita Rajasingham, John Tiffin, 2002-09-11 Shirley zips into her skin tight school uniform which on the outside looks something like a ski suit The lining of the suit in fact contains cabling that makes the suit a communication system and there are pressure pads where the suit touches skin that give a sense of touch Next she sits astride something that is a bit like a motorbike except that it has no wheels and is attached firmly to the floor Her feet fit on to something similar to a brake and accelerator and her gloved hands hold onto handlebars She shouts I

m off to school Dad Her father who is taking time out from his teleworking begins to remind her that the family are going teleshopping in the virtual city later in the day but it is too late his daughter has already donned her school helmet She is no longer in the real world of her real home she is in the virtual world of her virtual school Is this the shape of the future of education This book presents a vision of what will happen to education and training as information technology develops The argument is simple To prepare people for life in an information society they need to be taught with the technology of an information society But what shape will that take Can the classroom as we know it a communications system which has been in place for four thousand years be replaced The authors argue that through the development of telecommunications for telelearning a genuine revolution in education is in the making The book describes how through the convergence of a cluster of new technologies including virtual reality artificial intelligence nanotechnology and the superhighways of telecommunications a new educational paradigm will emerge in the form of a virtual class Teachers trainers and educators who worry about how best to prepare students for life in an ever changing world will find much inspiration in this engagingly written and jargon free book A Syllabus of the Course of Study in the History of Education Paul Monroe,1916

Stenger,2018-12-07 Education in the Graeco Roman world was a hallmark of the polis Yet the complex ways in which pedagogical theory and practice intersected with their local environments has not been much explored in recent scholarship Learning Cities in Late Antiquity suggests a new explanatory model that helps to understand better how conditions in the cities shaped learning and

teaching and how in turn education had an impact on its urban context Drawing inspiration from the modern idea of learning cities the chapters explore the interplay of teachers learners political leaders communities and institutions in the Mediterranean polis with a focus on the well documented city of Gaza in the sixth century CE They demonstrate in detail that formal and informal teaching as well as educational thinking not only responded to specifically local needs but also exerted considerable influence on local society With its interdisciplinary and comparatist approach the volume aims to contextualise ancient education in order to stimulate further research on ancient learning cities It also highlights the benefits of historical research to theory and practice in modern education

Learning to Flourish Daniel R. DeNicola, 2012-08-02 What is a liberal arts education How does it differ from other forms of learning What are we to make of the debates that surround it What are its place its value and its prospects in the contemporary world These are questions that trouble students and their parents educators critics and policy makers and philosophers of education among others Learning to Flourish offers a lucid penetrating philosophical exploration of liberal learning a still evolving tradition of theory and practice that has dominated and sustained intellectual life and learning in much of the globe for two millennia This study will be of interest to anyone seeking to understand liberal arts education as well as to educators and philosophers of education Daniel R DeNicola weighs the views of both advocates and critics of the liberal arts and interprets liberal education as a vital tradition aimed supremely at understanding and living a flourishing life He elaborates the tradition as expressed in five competing but complementary paradigms that transcend theories of curriculum and pedagogy and are manifested in particular social contexts He examines the transformative power of liberal education and its relation to such values as freedom autonomy and democracy reflecting on the importance of intrinsic value and moral understanding Finally DeNicola considers age old obstacles and current threats to liberal education ultimately asserting its value for and urgent need in a global pluralistic technologically advanced society The result is a bold yet nuanced theory alert to both historical and contemporary discussions and a significant contribution to the discourse on liberal education
