Gene Function in Prokaryotes Jonathan R. Beckwith, 1983 **National Library of Medicine Current Catalog** National Library of Medicine (U.S.), 1985 Current Catalog National Library of Medicine (U.S.), First multi year cumulation covers six years 1965-70 **The Biochemistry of the Nucleic Acids** R. L. Adams, 2012-12-06 When the first edition of this book was published in 1950 it set out to present an elementary outline of the state of knowledge of nucleic acid biochemistry at that time and it was the first monograph on the subject to appear since Levene's book on Nucleic Acids in 1931. The fact that a tenth edition is required after thirty five years and that virtually nothing of the original book has been retained is some measure of the speed with which knowledge has advanced in this field. As a result of this vast increase in information it becomes increasingly difficult to fulfil the aims of providing an introduction to nucleic acid biochemistry and satisfying the requirements of advanced undergraduates and postgraduates in biochemistry, genetics and molecular biology. We have attempted to achieve these aims by concentrating on those basic aspects not normally covered in the general biochemistry textbooks and by providing copious references so that details of methodology can readily be retrieved by those requiring further information. The first seven editions emerged from the pen of J. N. Davidson who died in September 1972 shortly after completing the seventh edition. The subsequent editions have been produced by various colleagues who have tried to retain something of the character and structure of the earlier editions while at the same time introducing new ideas and concepts and eliminating some of the more out dated material. Current Catalog , 1988 First multi year cumulation covers six years 1965-70 **Translational Control of Gene Expression** Nahum Sonenberg, John W. B. Hershey, Michael B. Mathews, 2001 Since the 1996 publication of Translational Control there has been fresh interest in protein synthesis and recognition of the key role of translation control mechanisms in regulating gene expression. This new monograph updates and expands the scope of the earlier book but it also takes a fresh look at the field. In a new format the first eight chapters provide broad overviews while each of the additional twenty eight has a focus on a research topic of more specific interest. The result is a thoroughly up to date account of initiation, elongation and termination of translation control mechanisms in development in response to extracellular stimuli and the effects on the translation machinery of virus infection and disease. This book is essential reading for students entering the field and an invaluable resource for investigators of gene expression and its control. **Nucleases** Stuart M. Linn, Richard J. the most relevant information about viral receptors and viral cell invasion The chapters are broadly grouped under three topics description of viral receptors viral attachment and uptake and receptor related virus host interaction Among the specific titles human receptors for retroviruses receptor binding and membrane fusion by influenza hemagglutinin and interaction of reovirus with eukaryotic host pathogenesis and host immune response Annotation copyright by Book News Inc Portland OR Insect Molecular Genetics Marjorie A.
