Infrared and Raman Spectroscopy of Biological Molecules T. Theophanides,2012-12-06 For this summer school in Athens Greece August 22-21 1978 I took as my objective the presentation of a timely representative account of the application of infrared and Raman

spectroscopy to biological molecules A summer school is made up of a number of things ideas people organization international collaboration and sponsorship The exchange of ideas the student lecturer interaction in the discussion periods and the tutorials satisfy the urgent need of all the participants to meet and discuss topics of current scientific interest It seems therefore appropriate to publish this summer school proceedings in order to make it a lasting event and that appreciation be shown to those people and institutions that made it all possible The summer school was held under the auspices of the Greek Ministry of Culture and Sciences under the sponsorship of the NATO Scientific Affairs Division in Brussels In addition support was provided by the National Hellenic Research Foundation and the Ministry of Culture and Sciences for several social and scientific functions Fluorescence Studies on Biological Membranes Herwig J.

Hilderson,2012-12-06 As stated by its first editor Dr D B Roodyn the primary goal of the series Subcellular Biochemistry is to achieve an integrated view of the cell by bringing together results from a wide range of different techniques and disciplines This volume deals with the applications of fluorescence spectroscopy to membrane research It seeks to present complementary biochemical and bio physical data on both the structure and the dynamics of biological membranes Biophysics and biochemistry are improving more and more in their ability to study biomembranes overlapping somewhat in this area and explaining the functioning of the whole cell in terms of the properties of its individual components Therefore we have brought together an international group of experts in order to report on and review advances in fluorescence studies on biological membranes thereby highlighting subcellular aspects The first chapters present a critical evaluation of the current applications of dynamic and steady state fluorescence techniques Subsequent chapters discuss more specific applications in cells biological membranes and their constituents lipids proteins National Library of Medicine Current Catalog National Library of Medicine (U.S.),1974 First multi year cumulation covers six years 1965 70 *Colloid and Interface Science V5* Milton Kerker,2012-12-02 Colloids and Interface Science Volume V Biocolloids Polymers Monolayers Membranes and General Papers is a collection of manuscripts presented at the International Conference on Colloids and Surfaces held in San Juan Puerto Rico on June 21 25 1976 The conference is sponsored jointly by the Division of Colloid and Surface Chemistry of the American Chemical Society and the International Union of Pure and Applied Chemistry in celebration of the 50th Anniversary of the Division and the 50th Colloid and Surface Science Symposium This volume is organized into 51 chapters that cover the subjects of biocolloids polymers monolayers membranes and general papers Other topics discussed include the thermodynamic aspects of biocolloids adsorption of polymers ion exchange behavior optical properties of polymers microvoid films micellar systems and liquid crystals The remaining chapters explore the diffusion and sorption of simple ions surface properties of copolymers and adhesion of thermoplastic elastomers Myelin Pierre Morell,2013-11-21 The division of the mature mammalian brain and spinal cord into regions of white matter and gray matter is observable upon the most cursory inspection Microscopic examination indicates that the white matter regions are

characterized by a multilamellar sheath myelin which surrounds the axons. A morphologically similar myelin imparts the white color to tracts of the peripheral nervous system although as is emphasized throughout the book there are very significant morphological and chemical differences between central and peripheral myelin. The rapid postnatal accumulation of myelin is temporally associated with increasing functional capacity and presumably indicates some important role related to neuronal activity. The ability of myelinated axons to conduct electrical impulses much more rapidly and with much lower use of energy relative to unmyelinated axons is now generally accepted. As is evident from the above capsule description a considerable body of information concerning myelin is available. However as in other areas of research the unknown expands before us more rapidly than we are able to add to our core of knowledge. This is a corollary of the axiom that a good experiment raises more questions than it answers. Among the areas currently under investigation in many laboratories are the following: interaction of myelin forming cells with neurons; assembly and metabolism of myelin; molecular architecture of myelin and the details of the functional role of myelin.

Toxins Philip Rosenberg, 2013-10-02. *Toxins: Animal, Plant and Microbial* is a collection of materials from the proceedings of the Fifth International Symposium on Animal, Plant and Microbial toxins held in Costa Rica in August 1976. The book deals with research done on reptiles, arthropods, marine, fresh water, amphibians, plants, bacteria and multispecies focusing on topics such as biology, anatomy, immunology, biochemistry, physiology and pharmacology. The paper starts with the feeding methods and diet for snakes that will be used for venom collection. Another paper describes the venom apparatus and amount of venom yields of the snake Hydrophiidae. The book also describes the ultrastructure of the skin of the soapfish *Grammistes sexlineatus* known to release an irritating substance when threatened or disturbed. One paper presents the effect of toxins derived from the scorpion venom on neuromuscular transmission while another study describes anti-scorpion serum and antivenin with a corresponding table representing the correct serum dosage. The book then presents a method to use for quantitative separation and analysis of certain mycotoxins that can be present in foodstuffs. One paper also addresses the effects of mycotoxins on immunity levels such as lowered resistance to diseases, interference with acquired immunity and changes in antibody production. Chemists, students and professors in organic chemistry and laboratory technicians whose work is related to pharmacology and toxicology will find this book relevant.

The carbohydrate components of tumor cell periphery, the composition and structure of excitable nerve membrane and the role of membranes in the fertilization process are covered as well. Cytologists, molecular biologists, biochemists and anatomists will

find the book very invaluable *Drug-Membrane Interactions* Joachim K. Seydel, Michael Wiese, 2009-07-10 Barrier reservoir target site those are but some of the possible functions of biological lipid membranes in the complex interplay of drugs with the organism A detailed knowledge of lipid membranes and of the various modes of drug membrane interaction is therefore the prerequisite for a better understanding of drug action Many of today's pharmaceuticals are amphiphilic or catamphiphilic enabling them to interact with biological membranes Crucial membrane properties are surveyed and techniques to elucidate drug membrane interactions presented including computer aided predictions Effects of membrane interaction on drug action and drug distribution are discussed and numerous examples are given This unique reference volume builds on the authors long experience in the study of drug membrane interaction Recommended reading for everyone involved in pharmaceutical research *Developmental Neurochemistry* Richard Calvin Wiggins, David W.
