Formal Methods For Real Time Computing:

Formal Methods for Real-Time Computing Constance Heitmeyer,Dino Mandrioli,1996-06-04 Focusing on formal methods this book offers a complete coverage of new developments with emphasis on practical application Starting with a survey of formal methods for real time systems topics include program specification formal methods analyzing and design of real time systems The book is essential reading for developers of safety critical systems and researchers in the field   Formal Methods for Real-Time and Probabilistic Systems Jost-Pieter Katoen,2003-05-21 This book constitutes the refereed proceedings of the Fifth International AMAST Workshop on Formal Methods for Real Time and Probabilistic Systems ARTS 99 held in Bamberg Germany in May 1999 The 17 revised full papers presented together with three invited contributions were carefully reviewed and selected from 33 submissions The papers are organized in topical sections on verification of probabilistic systems model checking for probabilistic systems semantics of probabilistic process calculi semantics of real time processes real time compilation stochastic process algebra and modeling and verification of real time systems   Real Time Computing Alexander D. Stoyenko,2013-12-14 NATO s Division of Scientific and Environmental Affairs sponsored this Advan ced Study Institute because it was felt to be timely to cover this important and challengjng subject for the first time in the framework of NATO s ASI programme The significance of real time systems in everyones life is rapidly growing The vast spectrum of these systems can be characterised by just a few examples of increasing complexity controllers in washing machines air traffic control systems control and safety systems of nuclear power plants and finally future military systems like the Strategic Defense Initiative SDI The import ance of such systems for the well being of people requires considerable efforts in research and development of highly reliable real time systems Furthermore the competitiveness and prosperity of entire nations now depend on the early app lication and efficient utilisation of computer integrated manufacturing systems CIM of which real time systems are an essential and decisive part Owing to its key significance in computerised defence systems real time computing has also a special importance for the Alliance The early research and development activities in this field in the 1960s and 1970s aimed towards improving the then unsatisfactory software situation Thus the first high level real time languages were defined and developed RTL 2 Coral 66 Procol LTR and PEARL In close connection with these language develop ments and with the utilisation of special purpose process control peripherals the research on real time operating systems advanced considerably   *Formal Techniques in Real-Time and Fault-Tolerant Systems* Werner Damm,Ernst-Rüdiger Olderog,2002-08-28 This volume contains the proceedings of FTRTFT 2002 the International S posium on Formal Techniques in Real Time and Fault Tolerant Systems held at the University of Oldenburg Germany 9 12 September 2002 This sym sium was the seventh in a series of FTRTFT symposia devoted to problems and solutions in safe system design The previous symposia took place in Warwick 1990 Nijmegen 1992 Lub eck 1994 Uppsala 1996 Lyngby 1998 and Pune 2000 Proceedings of these symposia were published as volumes 331 571 863 1135 1486 and 1926 in the LNCS series by Springer

Verlag This year the sym sium was co sponsored by IFIP Working Group 2 2 on Formal Description of Programming Concepts The symposium presented advances in the development and use of formal techniques in the design of real time hybrid fault tolerant embedded systems covering all stages from requirements analysis to hardware and or software plementation Particular emphasis was placed on UML based development of real time systems Through invited presentations links between the dependable systems and formal methods research communities were strengthened With the increasing use of such formal techniques in industrial settings the conference aimed at stimulating cross fertilization between challenges in industrial usages of formal methods and advanced research Inresponsetothecallforpapers 39submissionswerereceived Eachsubm sion was reviewed by four program committee members assisted by additional referees At the end of the reviewing process the program committee accepted 17 papers for presentation at the symposium **Formal Methods and Hybrid Real-Time Systems** Cliff B. Jones,Zhiming Liu,Jim Woodcock,2007-09-04 This Festschrift volume is published to honour both Dines Bj rner and Zhou Chaochen on the occasion of their 70th birthdays The volume includes 25 refereed papers by leading researchers current and former colleagues who congregated at a celebratory symposium held in Macao China in the course of the International Colloquium on Theoretical Aspects of Computing ICTAC 2007 The papers cover a broad spectrum of subjects **Formal Methods for the Design of Real-Time Systems** Marco Bernardo,Flavio Corradini,2004-12-07 A large class of computing systems can be specified and verified by abstracting away from the temporal aspects of their behavior In real time systems instead time issues become essential Their correctness depends not only on which functions they can perform but also on the action execution time Due to their importance and design challenges real time systems have attracted the attention of a considerable number of computer scientists and engineers from various research areas This volume collects a set of papers accompanying the lectures of the fourth edition of the International School on Formal Methods for the Design of Computer Communication and Software Systems SFM The school addressed the use of formal methods in computer science as a prominent approach to the r orous design of computer communication and software systems The main aim of the SFM series is to o er a good spectrum of current research in foundations as well as applications of formal methods which can be of help for graduate students and young researchers who intend to approach the field SFM 04 RT was devoted to real time systems It covered formal models and languages for the specification modeling analysis and verification of the seti critical systems the expressiveness of such models and languages as well as supporting tools and related applications in different domains **Formal Techniques in Real-Time and Fault-Tolerant Systems** Jan Vytopil,2012-12-06 Formal Techniques in Real Time and Fault Tolerant Systems focuses on the state of the art in formal specification development and verification of fault tolerant computing systems The term fault tolerance refers to a system having properties which enable it to deliver its specified function despite certain faults of its subsystem Fault tolerance is achieved by adding extra hardware and or software which corrects the effects of faults In this sense a system can be called

fault tolerant if it can be proved that the resulting extended system under some model of reliability meets the reliability requirements The main theme of Formal Techniques in Real Time and Fault Tolerant Systems can be formulated as follows how do the specification development and verification of conventional and fault tolerant systems differ How do the notations methodology and tools used in design and development of fault tolerant and conventional systems differ Formal Techniques in Real Time and Fault Tolerant Systems is divided into two parts The chapters in Part One set the stage for what follows by defining the basic notions and practices of the field of design and specification of fault tolerant systems The chapters in Part Two represent the how to section containing examples of the use of formal methods in specification and development of fault tolerant systems The book serves as an excellent reference for researchers in both academia and industry and may be used as a text for advanced courses on the subject **Formal Techniques in Real-Time and Fault-Tolerant Systems** Bengt Jonsson,Joachim Parrow,1996-08-21 This volume constitutes the refereed proceedings of the Fourth International Symposium on Formal Techniques in Real Time and Fault Tolerant Systems FTRTFTS 96 held in Uppsala Sweden in September 1996 The 22 revised full papers presented were selected from a total of 61 submissions also included are three invited contributions and five tools demonstrations The papers are organized in sections on state charts timed automata duration calculus case studies scheduling fault tolerance specification and verification **Integrated Formal Methods** Michael Butler,Luigia Petre,Kaisa Sere,2003-08-01 The third in a series of international conferences on Integrated Formal Methods IFM 2002 was held in Turku Finland May 15 17 2002 Turku situated in the south western corner of the country is the former capital of Finland The conference was organized jointly by Abo Akademi University and Turku Centre for Computer Science The theme of IFM 1999 was the integration of state and behavioral based formalisms For IFM 2000 this was widened to include all aspects pertaining to the integration of formal methods and formal notations One of the goals of IFM 2002 was to further investigate these themes Moreover IFM 2002 explored the relations between formal methods and graphical notations especially the industrialstandardlanguageforsoftwaredesign theUni edModelingLanguage UML The themes of IFM 2002 re ect what we believe is a growing trend in the Formal Methods and Software Engineering research communities Over the last threedecades computerscientistshavedevelopedarangeofformalismsfocusing on particular aspects of behavior or analysis such as sequential program str tures concurrentprogramstructures dataandinformationstructures temporal reasoning deductive proof and model checking Much e ort is now being voted to integrating these methods in order to combine their advantages and ensure they scale up to industrial needs Graphical notations are now widely used in software engineering and there is growing recognition of the importance ofprovidingthesewiththeformalunderpinningsandformalanalysiscapabilities found in formal methods **Formal Methods for Components and Objects** Frank S. de Boer,Marcello M. Bonsangue,Susanne Graf,Willem-Paul de Roever,2004-11-08 Formal methods have been applied successfully to the verification of medium sized programs in protocol and hardware

design However their application to more complex systems resulting from the object oriented and the more recent component based software engineering paradigms requires further development of specification and verification techniques supporting the concepts of reusability and modifiability This book presents revised tutorial lectures given by invited speakers at the Second International Symposium on Formal Methods for Components and Objects FMCO 2003 held in Leiden The Netherlands in November 2003 The 17 revised lectures by leading researchers present a comprehensive account of the potential of formal methods applied to large and complex software systems such as component based systems and object systems The book makes a unique contribution to bridging the gap between theory and practice in software engineering
