# Formalized Recursive Functionals And Formalized Realizability

**S.C. Kleene**

## **Formalized Recursive Functionals And Formalized Realizability:**

**Formalized Recursive Functionals and Formalized Realizability** Stephen Cole Kleene, 1969 This monograph carries out the program which the author formulated in earlier work the formalization of the theory of recursive functions of type 0 and 1 and of the theory of realizability *Formalized recursive functionals and formalized realizability* S.C. Kleene, 1969

**Handbook of Mathematical Logic** J. Barwise, 1982-03-01 The handbook is divided into four parts model theory set theory recursion theory and proof theory Each of the four parts begins with a short guide to the chapters that follow Each chapter is written for non specialists in the field in question Mathematicians will find that this book provides them with a unique opportunity to apprise themselves of developments in areas other than their own **Classical Recursion Theory** P. Odifreddi, 1992-02-04 1988 marked the first centenary of Recursion Theory since Dedekind's 1888 paper on the nature of number Now available in paperback this book is both a comprehensive reference for the subject and a textbook starting from first principles Among the subjects covered are various equivalent approaches to effective computability and their relations with computers and programming languages a discussion of Church's thesis a modern solution to Post's problem global properties of Turing degrees and a complete algebraic characterization of many one degrees Included are a number of applications to logic in particular Gödel's theorems and to computer science for which Recursion Theory provides the theoretical foundation **Metamathematical Investigation of Intuitionistic Arithmetic and Analysis** Anne S. Troelstra, 2006-11-15 Cambridge Summer School in Mathematical Logic A. R. D. Mathias, H. Rogers, 2006-11-15

*Handbook of Proof Theory* S.R. Buss, 1998-07-09 This volume contains articles covering a broad spectrum of proof theory with an emphasis on its mathematical aspects The articles should not only be interesting to specialists of proof theory but should also be accessible to a diverse audience including logicians mathematicians computer scientists and philosophers Many of the central topics of proof theory have been included in a self contained expository of articles covered in great detail and depth The chapters are arranged so that the two introductory articles come first these are then followed by articles from core classical areas of proof theory the handbook concludes with articles that deal with topics closely related to computer science **Iterated Inductive Definitions and Subsystems of Analysis: Recent Proof-Theoretical Studies** W.

Buchholz, S. Feferman, W. Pohlers, W. Sieg, 2006-11-14 **New Computational Paradigms** S.B. Cooper, Benedikt Löwe, Andrea Sorbi, 2007-11-28 This superb exposition of a complex subject examines new developments in the theory and practice of computation from a mathematical perspective with topics ranging from classical computability to complexity from biocomputing to quantum computing This book is suitable for researchers and graduate students in mathematics philosophy and computer science with a special interest in logic and foundational issues Most useful to graduate students are the survey papers on computable analysis and biological computing Logicians and theoretical physicists will also benefit from this book

**Constructivism in Mathematics, Vol 2** A.S. Troelstra, D. van Dalen, 2014-06-28 Studies in Logic and the Foundations of

Mathematics Volume 123 Constructivism in Mathematics An Introduction Vol II focuses on various studies in mathematics and logic including metric spaces polynomial rings and Heyting algebras The publication first takes a look at the topology of metric spaces algebra and finite type arithmetic and theories of operators Discussions focus on intuitionistic finite type arithmetic theories of operators and classes rings and modules linear algebra polynomial rings fields and local rings complete separable metric spaces and located sets The text then examines proof theory of intuitionistic logic theory of types and constructive set theory and choice sequences The book elaborates on semantical completeness sheaves sites and higher order logic and applications of sheaf models Topics include a derived rule of local continuity axiom of countable choice forcing over sites sheaf models for higher order logic and complete Heyting algebras The publication is a valuable reference for mathematicians and researchers interested in mathematics and logic Mathematical Intuitionism: Introduction to Proof Theory Al'bert Grigor'evi\_ Dragalin,1988-12-31 In the area of mathematical logic a great deal of attention is now being devoted to the study of nonclassical logics This book intends to present the most important methods of proof theory in intuitionistic logic and to acquaint the reader with the principal axiomatic theories based on intuitionistic logic

*Intuitionism and Proof Theory: Proceedings of the Summer Conference at Buffalo N.Y. 1968* Lev D.

Beklemishev,2000-04-01 Intuitionism and Proof Theory Proceedings of the Summer Conference at Buffalo N Y 1968 *Logic Colloquium 2000 (hardcover)* Rene Cori,Alexander Razborov,Stevo Todorcevic,Carol Wood,2005-04-25 This compilation of papers presented at the 2000 European Summer Meeting of the Association for Symbolic Logic marks the centennial anniversary of Hilbert s famous lecture Held in the same hall at La Sorbonne where Hilbert first presented his famous problems this meeting carries special significance to the Mathematics and Logic communities **Logics of Programs** Rohit Parikh,1985-06 **Logic Colloquium 2000** René Cori,Alexander Razborov,Stevo Todorčević,Carol Wood,2017-03-30 Since their inception the Perspectives in Logic and Lecture Notes in Logic series have published seminal works by leading logicians Many of the original books in the series have been unavailable for years but they are now in print once again This volume the nineteenth publication in the Lecture Notes in Logic series collects the proceedings of the European Summer Meeting of the Association for Symbolic Logic held in Paris France in July 2000 This meeting marked the centennial anniversary of Hilbert s famous lecture and was held in the same hall at La Sorbonne where Hilbert presented his problems Three long articles based on tutorials given at the meeting present accessible expositions of developing research in model theory computability and set theory The eleven subsequent papers present work from the research frontier in all areas of mathematical logic **Gödel's Disjunction** Leon Horsten,Philip Welch,2016-09-09 The logician Kurt G del in 1951 established a disjunctive thesis about the scope and limits of mathematical knowledge either the mathematical mind is not equivalent to a Turing machine i e a computer or there are absolutely undecidable mathematical problems In the second half of the twentieth century attempts have been made to arrive at a stronger conclusion In particular arguments have been produced by the philosopher J R Lucas

and by the physicist and mathematician Roger Penrose that intend to show that the mathematical mind is more powerful than any computer These arguments and counterarguments to them have not convinced the logical and philosophical community The reason for this is an insufficiency of rigour in the debate The contributions in this volume move the debate forward by formulating rigorous frameworks and formally spelling out and evaluating arguments that bear on Gödel's disjunction in these frameworks The contributions in this volume have been written by world leading experts in the field     *Notices of the American Mathematical Society* American Mathematical Society,1981     *Constructive Mathematics* F. Richman,2006-11-14

*Logic Colloquium '90* Juha Oikkonen,Jouko Väänänen,2017-03-02 Since their inception the Perspectives in Logic and Lecture Notes in Logic series have published seminal works by leading logicians Many of the original books in the series have been unavailable for years but they are now in print once again This volume the second publication in the Lecture Notes in Logic series is the proceedings of the Association for Symbolic Logic meeting held in Helsinki Finland in July 1990 It contains eighteen papers by leading researchers covering all fields of mathematical logic from the philosophy of mathematics through model theory proof theory recursion theory and set theory to the connections of logic to computer science The articles published here are still widely cited and continue to provide ideas for ongoing research projects     *Logic, Construction, Computation* Ulrich Berger,Hannes Diener,Peter Schuster,Monika Seisenberger,2013-05-02 Over the last few decades the interest of logicians and mathematicians in constructive and computational aspects of their subjects has been steadily growing and researchers from disparate areas realized that they can benefit enormously from the mutual exchange of techniques concerned with those aspects A key figure in this exciting development is the logician and mathematician Helmut Schwichtenberg to whom this volume is dedicated on the occasion of his 70th birthday and his turning emeritus The volume contains 20 articles from leading experts about recent developments in Constructive set theory Provably recursive functions Program extraction Theories of truth Constructive mathematics Classical vs intuitionistic logic Inductive definitions and Continuous functionals and domains
