Foundational Issues In Artificial Intelligence And Cognitive Science:

Foundational Issues in Artificial Intelligence and Cognitive Science M.H. Bickhard, L. Terveen, 1995-03-01 The book focuses on a conceptual flaw in contemporary artificial intelligence and cognitive science. Many people have discovered diverse manifestations and facets of this flaw but the central conceptual impasse is at best only partially perceived. Its consequences nevertheless visit themselves as distortions and failures of multiple research projects and make impossible the ultimate aspirations of the fields. The impasse concerns a presupposition concerning the nature of representation that all representation has the nature of encodings. Encodingism. Encodings certainly exist but encodingism is at root logically incoherent. Any programmatic research predicted on it is doomed to distortion and ultimate failure. The impasse and its consequences and steps away from that impasse are explored in a large number of projects and approaches. These include SOAR, CYC, PDP, situated cognition, subsumption architecture, robotics, and the frame problems. A general survey of the current research in AI and Cognitive Science emerges. Interactivism, an alternative model of representation, is proposed and examined.

Proceedings of the Twentieth Annual Conference of the Cognitive Science Society Morton Ann Gernsbacher, Sharon J. Derry, 2022-05-16 This volume features the complete text of the material presented at the Twentieth Annual Conference of the Cognitive Science Society. As in previous years, the symposium included an interesting mixture of papers on many topics from researchers with diverse backgrounds and different goals, presenting a multifaceted view of cognitive science. This volume contains papers, posters, and summaries of symposia presented at the leading conference that brings cognitive scientists together to discuss issues of theoretical and applied concern. Submitted presentations are represented in these proceedings as long papers, those presented as spoken presentations, and full posters at the conference, and short papers, those presented as abstract posters by members of the Cognitive Science Society.

Handbook of Cognitive Science Paco Calvo, Antoni Gomila, 2008-08-15 The Handbook of Cognitive Science provides an overview of recent developments in cognition research, relying upon non-classical approaches. Cognition is explained as the continuous interplay between brain, body, and environment, without relying on classical notions of computations and representation to explain cognition. The handbook serves as a valuable companion for readers interested in foundational aspects of cognitive science and neuroscience and the philosophy of mind. The handbook begins with an introduction to embodied cognitive science and then breaks up the chapters into separate sections on conceptual issues, formal approaches, embodiment in perception and action, embodiment from an artificial perspective, embodied meaning and emotion, and consciousness. Contributors to the book represent research overviews from around the globe, including the US, UK, Spain, Germany, Switzerland, France, Sweden, and the Netherlands.

Physical Computation and Cognitive Science Nir Fresco, 2013-10-12 This book presents a study of digital computation in contemporary cognitive science. Digital computation is a highly ambiguous concept as there is no common core definition for it in cognitive science. Since this concept plays a central role in cognitive theory, an adequate

cognitive explanation requires an explicit account of digital computation More specifically it requires an account of how digital computation is implemented in physical systems The main challenge is to deliver an account encompassing the multiple types of existing models of computation without ending up in pancomputationalism that is the view that every physical system is a digital computing system This book shows that only two accounts among the ones examined by the author are adequate for explaining physical computation One of them is the instructional information processing account which is developed here for the first time This book provides a thorough and timely analysis of differing accounts of computation while advancing the important role that information plays in understanding computation Fresco's two pronged approach will appeal to philosophically inclined computer scientists who want to better understand common theoretical claims in cognitive science Marty J Wolf Professor of Computer Science Bemidji State University An original and admirably clear discussion of central issues in the foundations of contemporary cognitive science Frances Egan Professor of Philosophy Rutgers The State University of New Jersey

The Routledge Handbook of Embodied Cognition Lawrence Shapiro, 2014-04-29 Embodied cognition is one of the foremost areas of study and research in philosophy of mind philosophy of psychology and cognitive science The Routledge Handbook of Embodied Cognition is an outstanding guide and reference source to the key topics and debates in this exciting subject and essential reading for any student and scholar of philosophy of mind and cognitive science Comprising over thirty chapters by a team of international contributors the Handbook is divided into six parts Historical underpinnings Perspectives on embodied cognition Applied embodied cognition perception language and reasoning Applied embodied cognition social

and moral cognition and emotion Applied embodied cognition memory attention and group cognition Meta topics The early chapters of the Handbook cover empirical and philosophical foundations of embodied cognition focusing on Gibsonian and phenomenological approaches Subsequent chapters cover additional important themes common to work in embodied cognition including embedded extended and enactive cognition as well as chapters on empirical research in perception language reasoning social and moral cognition emotion consciousness memory and learning and development The Dissolution of Mind Oscar Vilarroya, 2021-12-28 This book presents an original thesis about the notion of sensory experience and of the mind's architecture which is grounded in current trends in cognitive science and philosophy of mind Presented in the form of a dialogue the book explores some of the psychological and philosophical consequences that the author derives from his proposal

Philosophy and AI Robert Cummins, John L. Pollock, 1991 Philosophy and AI presents invited contributions that focus on the different perspectives and techniques that philosophy and AI bring to the theory of rationality Philosophers have found that the concepts and technology of artificial intelligence provide useful ways to test theories of knowledge and reason Conversely researchers in artificial intelligence noting that the production of information processing systems require a prior theory of rationality have begun writing philosophy Philosophy and AI presents invited contributions that focus on the different perspectives and techniques that philosophy and AI bring to the theory of rationality A Bradford Book

Ontological Semantics Sergei Nirenburg, Victor Raskin, 2004 A comprehensive theory based approach to the treatment of text meaning in natural language processing applications Computational Intelligence - Volume I Hisao Ishibuchi, 2015-12-30 Computational intelligence is a component of Encyclopedia of Technology Information and Systems Management Resources in the global Encyclopedia of Life Support Systems EOLSS which is an integrated compendium of twenty one Encyclopedias Computational intelligence is a rapidly growing research field including a wide variety of problem solving techniques inspired by nature Traditionally computational intelligence consists of three major research areas Neural Networks Fuzzy Systems and Evolutionary Computation Neural networks are mathematical models inspired by brains Neural networks have massively parallel network structures with many neurons and weighted connections Whereas each neuron has a simple input output relation a neural network with many neurons can realize a highly non linear complicated mapping Connection weights between neurons can be adjusted in an automated manner by a learning algorithm to realize a non linear mapping required in a particular application task Fuzzy systems are mathematical models proposed to handle inherent fuzziness in natural language For example it is very difficult to mathematically define the meaning of cold in everyday conversations such as It is cold today and Can I have cold water The meaning of cold may be different in a different situation Even in the same situation a different person may have a different meaning Fuzzy systems offer a mathematical mechanism to handle inherent fuzziness in natural language As a result fuzzy systems have been successfully applied to real world problems by extracting linguistic knowledge from human experts in the form of fuzzy IF THEN rules Evolutionary

computation includes various population based search algorithms inspired by evolution in nature Those algorithms usually have the following three mechanisms fitness evaluation to measure the quality of each solution selection to choose good solutions from the current population and variation operators to generate offspring from parents Evolutionary computation has high applicability to a wide range of optimization problems with different characteristics since it does not need any explicit mathematical formulations of objective functions For example simulation based fitness evaluation is often used in evolutionary design Subjective fitness evaluation by a human user is also often used in evolutionary art and music These volumes are aimed at the following five major target audiences University and College students Educators Professional practitioners Research personnel and Policy analysts managers and decision makers

Cognition In and Out of the Mind Giovanni Bennardo, Victor C. de Munck, Stephen Chrisomalis, 2024-06-30 This edited collection presents an agenda for the interdisciplinary study of anthropology and cognitive science It consists of fifteen chapters written by international experts on the relationship between culture and cognition This volume is unique in that it includes both inside i e shared mental templates and outside i e extended embedded enactive and ecological theories of cognition The contributors come from the diverse disciplinary fields of anthropology linguistics archaeology and cognitive science The aim is to investigate the mental production of shared knowledge goals and desires around which human social life revolves The coverage spans cultural and linguistic evolution the importance of local histories and the role of cultural models to understand and interact with the world Drawing on cultural model theory this volume is an invaluable resource for linguists cognitive scientists anthropologists and other social scientists willing to explore and understand how the sharedness of culture can bond us all together across relative cultural differences and mis perceived divisions

Philosophical and Foundational Issues in Measurement Theory C. Wade Savage, Philip Ehrlich, 2013-06-17 Measurement theory has only recently become recognized as a legitimate specialized field of inquiry This text covers a wide range of issues of central concern to contemporary measurement theorists and a broad range of philosophical perspectives are represented The formalist representationalist approach defines measurement as the assignment of numbers to entities and events to represent their properties and relations It also states that measurement theory is supposed to analyze the concept of a scale of measurement describe various types of scales and their uses and formulate the conditions required for the existence of scales of various types Since this approach dominates contemporary measurement theory the volume begins with essays by some of its leading architects In order to allow for diverse points of view the book also includes articles that attempt to broaden this approach and several that even criticize the approach

The Whole Person Mark H. Bickhard, 2024-11-27 The Whole Person explores the realms of theory and philosophy concerning minds and persons This book presents models of the emergent realization of multiple mental processes and of the constitution of social realities and social persons Each chapter explores prevalent theoretical and philosophical assumptions that obstruct the acceptance of models depicting emergent realization offering analyses of these

barriers and demonstrating ways to overcome them Rooted in the framework of process metaphysics this book models metaphysically genuine emergence paving the way for a comprehensive model of multifarious normative emergences These normative emergences include phenomena such as function dysfunction representational truth and falsity rational irrational ethical unethical and others that shape our mental and social landscapes The discussion extends to the macro evolutionary culmination of mental processes in a model of reflective consciousness The book then extends its exploration to the foundational role of mental processes in the emergence of social realities and persons with language acting as a core element in these emergences Addressing evolutionary aspects brain processes developmental processes moral normativities and self consistency considerations The Whole Person presents a holistic integration of decades of constructive work Endorsements This ambitious yet unpretentious carefully constructed and argued book is a must read for anyone with serious interest in the nature of persons and the psychology of personhood Mark Bickhard s The Whole Person is a sustained and convincing narrative about our individual and collective evolution and emergence as the unique beings that we are Of particular interest is his account of the emergence of persons as homo socius Here Professor Bickhard captures key but often overlooked historical sociocultural and socio developmental dynamics and processes that make us who we are a species constantly interacting with each other and the world in a never ending process of mutual co constitution By theorizing a process metaphysics replete with emergent normativity that does not clash with a naturalistic ontological psychology Bickhard takes a giant step toward seeing ourselves as we are and as we might become Jack Martin Professor Emeritus Simon Fraser University A typical psychological theory offers narrow generalizations about data sets obtained by semi proprietary empirical methods The basic empirical research on which such theories have depended is in crisis tremendous effort has gone into ill motivated studies applying statistics inappropriately to inadequate samples too often generating irreproducible results The kind of theory that psychology needs is broad and deep pays no respect to boundaries between specialties makes falsifiable predictions and answers to arguments in principle The Whole Person presents just such a theory psychologists whether their aim is to extend it and support it or to challenge it and refute it will benefit from studying it closely Robert L Campbell Professor Emeritus Psychology Clemson University Presents models of how multiple mental processes are emergently realized and of how social persons are constituted Discusses the problems of representation and their implications Reviews naturalism and normativity within the early 20th century **Representation in Mind** Hugh Clapin, Phillip Staines, Peter Slezak, 2004-06-04 Representation in Mind is the first book in the new series Perspectives on Cognitive Science and includes well known contributors in the areas of philosophy of mind psychology and cognitive science The papers in this volume offer new ideas fresh approaches and new criticisms of old ideas The papers deal in new ways with fundamental questions concerning the problem of mental representation that one contributor Robert Cummins has described as THE problem in philosophy of mind for some time now The editors introductory overview considers the problem for which mental

representation has been seen as an answer sketching an influential framework outlining some of the issues addressed and then providing an overview of the papers. Issues include the relation between mental representation and public non mental representation, misrepresentation, the role of mental representations in intelligent action, the relation between representation and consciousness, the relation between folk psychology and explanations invoking mental representations.

Nursing Informatics and the Foundation of Knowledge Dee McGonigle, Kathleen Mastrian, 2021-03-17 Nursing Informatics and the Foundation of Knowledge Fifth Edition is a foundational text for teaching nursing students the core concepts of knowledge management while providing an understanding of the current technological tools and resources available.

Thinking Computers and Virtual Persons Eric Dietrich, 2014-05-10 Thinking Computers and Virtual Persons Essays on the Intentionality of Machines explains how computations are meaningful and how computers can be cognitive agents like humans. This book focuses on the concept that cognition is computation. Organized into four parts encompassing 13 chapters, this book begins with an overview of the analogy between intentionality and phlogiston, the 17th century principle of burning. This text then examines the objection to computationalism that it cannot prevent arbitrary attributions of content to the various data structures and representations involved in a computational process. Other chapters consider that the notion of original intentionality is incoherent. This book argues as well that the only way to build an intelligent machine is to build a neural network. The final chapter claims that an entire theoretical framework in cognitive psychology is incompatible with the view that human brains are computers of some sort. This book is a valuable resource for cognitive scientists.

The Oxford Handbook of Human Symbolic Evolution Nathalie Gontier, Andy Lock, Chris Sinha, 2024-01-17 The biological and neurological capacity to symbolize and the products of behavioral cognitive, sociocultural, linguistic and technological uses of symbols, symbolism are fundamental to every aspect of human life. The Oxford Handbook of Human Symbolic Evolution explores the origins of our characteristically human abilities: our ability to speak, create images, play music and read and write. The book investigates how symbolization evolved in human evolution and how symbolism is expressed across the various areas of human life. The field is intrinsically interdisciplinary, considering findings from fossil studies, scientific research from primatology, developmental psychology and of course linguistics. Written by world leading experts, thirty eight topical chapters are grouped into six thematic parts that respectively focus on epistemological, psychological, anthropological, ethological, linguistic and social technological aspects of human symbolic evolution. The handbook presents an in depth but comprehensive and interdisciplinary overview of the state of the art in the science of human symbolic evolution. This work will be of interest to academics and students active in all fields.
