Generative Mental Processes and Cognitive Resources U. Hecker, Stefan Dutke, Grzegorz Sedek, 2012-12-06 In recent years a booming research interest has been observed in linking basic cognitive processes with a variety of social and clinical phenomena Evidence comes from the increasing popularity of psychological paradigms such as social cognition cognitive psychopathology or cognitive aging What links those paradigms is their special focus on explaining cognitive phenomena by use of the concept of mental resources Immediate reasons for such a focus are found in the growing emphasis on understanding everyday dynamics of thinking and acting within a complex world as well as within personal constraints Obviously our current goals and choice of activities constrain and influence our reasoning as well as the processes of input to and retrieval from memory Situational demands will act to the same effect and the interplay between both internal and external constraints makes apparent a first and straightforward relevance of the resource notion in action oriented cognitive research For example person perception is a dynamic process depending on what my goals in perception are what the perceiving situation is that I find myself in and how complex the target characteristics are In fact the amount of resources spent in this process may be reflected in its speed the quality of the perceptual or mnemonic trace which is being created or the kind of social or non social behavior that can be supported *Multiple Pathways of Cognitive Aging* Grzegorz Sedek, Thomas M. Handbook of Individual Differences in Cognition Aleksandra Gruszka, Gerald Matthews, Blazej Szymura, 2010-06-16 As cognitive models of behavior continue to evolve the mechanics of cognitive

exceptionality with its range of individual variations in abilities and performance remains a challenge to psychology. Reaching beyond the standard view of exceptional cognition equaling superior intelligence, the *Handbook of Individual Differences in Cognition* examines the latest findings from psychobiology, cognitive psychology, and neuroscience for a comprehensive state of the art. Volume 1: Breaking down cognition in terms of attentional mechanisms, working memory, and higher order processing; contributors discuss general models of cognition and personality. Chapter authors build on this foundation as they revisit current theory in such areas as processing effort and general arousal and examine emerging methods in individual differences research, including new data on the role of brain plasticity in cognitive function. The possibility of a unified theory of individual differences in cognitive ability and the extent to which these variables may account for real world competencies are emphasized, and commentary chapters offer suggestions for further research priorities. Coverage highlights include: The relationship between cognition and temperamental traits; The development of autobiographical memory; Anxiety and attentional control; The neurophysiology of gender differences in cognitive ability; Intelligence and cognitive control; Individual differences in dual task coordination; The effects of subclinical depression on attention, memory, and reasoning; Mood as a shaper of information. Researchers, clinicians, and graduate students in psychology and cognitive sciences, including clinical psychology and neuropsychology, personality and social psychology, neuroscience, and education will find the *Handbook of Individual Differences in Cognition* an expert guide to the field as it currently stands and to its agenda for the future.

Understanding Human Development Ursula M. Staudinger, Ulman E.R. Lindenberger, 2012-12-06 K Warner Schaie. I am pleased to write a foreword for this interesting volume, particularly as over many years I have had the privilege of interacting with the editors and a majority of the contributors in various professional roles as a colleague, mentor, or research collaborator. The editors begin their introduction by asking why one would want to read yet another book on human development. They immediately answer their question by pointing out that many developmentally oriented texts and other treatises neglect the theoretical foundations of human development and fail to embed psychological constructs within the multidisciplinary context so essential to understanding development. This volume provides a positive remedy to past deficiencies in volumes on human development with a well organized structure that leads the reader from a general introduction through the basic processes to methodological issues and the relation of developmental constructs to social context and biological infrastructure. This approach does not surprise. After all, the editors and most of the contributors at one time or another had a connection to the Max Planck Institute of Human Development in Berlin, whether as students, junior scientists, or senior visitors. That institute, under the leadership of Paul Baltes, has been instrumental in pursuing a systematic lifespan approach to the study of cognition and personality. Over the past two decades, it has influenced the careers of a generation of scientists who have advocated long term studies of human development in an interdisciplinary context.
