Endocrine Autoimmunity And Associated Conditions:

Endocrine Autoimmunity and Associated Conditions A.P. Weetman, 2012-12-06 Autoimmunity is the most common cause of endocrine disorders This volume provides an up to date summary of recent advances in this important field In addition it describes developments in our understanding of conditions such as vitiligo and pernicious anaemia which are frequently associated with autoimmune endocrinopathies There is a detailed review of animal models of endocrine disease which have contributed greatly to current knowledge Furthermore the aetiology pathogenesis and treatment of the clinical disorders are discussed in depth The book will be of interest to anyone working in the areas of endocrinology and immunology *Autoimmune Diseases in Endocrinology* Anthony P. Weetman, 2007-12-26 Autoimmune Diseases in Endocrinology is a comprehensive and novel text that examines key features that predispose individuals to autoimmune diseases The text begins with three introductory chapters which provide sufficient information so that anyone including those without a background in recent immunology will be able to understand the developments in the field The next and largest section of the book concerns autoimmune thyroid disease and authors of these chapters take the reader through the basic epidemiology genetic and environmental risk factors immunopathogenesis and the diagnostic and management aspect of the disease The next section discusses Type 1 diabetes mellitus In the final section authors explain other autoimmune endocrinopathies including Addison s disease premature ovarian failure autoimmune hypophysitis and autoimmune polyglandular syndrome types 1 and 2 Comprehensive and timely *Autoimmune Diseases in Endocrinology* will become an essential reference for all endocrinologists and internal medicine practitioners working in this field **Autoimmune Endocrinopathies** Robert Volpé, 1999-06-04 Dr Robert Volp and his distinguished contributors comprehensively review the latest thinking about the theoretical experimental and clinical aspects of autoimmune endocrine disorders These world renowned experts examine the pathogenesis and immunogenetics of these diseases discuss the role of sex hormones in autoimmunity and elucidate the nature of autoantigens They also provide clinical detail on a wide variety of autoimmune endocrinopathies including autoimmune thyroid disease Graves ophthalmopathy and dermatopathy human insulin dependent diabetes mellitus and autoimmune adrenocortical failure Postpartum autoimmune endocrine syndromes autoimmune hypophysitis and the polyglandular autoimmune syndromes are also discussed in detail Comprehensive and authoritative *Autoimmune Endocrinopathies* provides today s most up to date understanding of the etiology and pathogenesis of autoimmune endocrine diseases **The Association of Other Autoimmune Diseases in Patients With Thyroid Autoimmunity** Alessandro Antonelli, Salvatore Benvenaga, 2018-11-02 Autoimmune thyroid diseases AITD are T cell mediated organ specific autoimmune disorders resulting from an immune dysregulation leading to a thyroid immune attack Antonelli and Benvenaga Graves disease and Hashimoto s thyroiditis are the two main clinical presentations of AITD and their clinical hallmarks are thyrotoxicosis and hypothyroidism respectively In many cases AITD may be associated in the same patient with

other organ specific autoimmune attacks such as in the case of type II autoimmune polyglandular syndrome or type I diabetes etc Furthermore AITD and thyroid function abnormalities have been frequently described in patients with systemic rheumatologic autoimmune diseases Conversely patients affected with the above mentioned autoimmune disorders are more frequently affected by AITD In this Research Topic constituted by nineteen papers we review and discuss new evidence about the association of other autoimmune diseases in patients with AITD Among other organ specific autoimmune disorders the associations of AITD with chronic autoimmune gastritis Cellini et al vitiligo Baldini E et al lichen Guarnieri et al psoriasis Ruffilli et al myasthenia gravis Lopomo and Berrih Akinin and glomerulopathies Santoro et al have been treated Also the associations of AITD in systemic autoimmune diseases have been treated as Sj gren s syndrome Baldini C et al systemic sclerosis Fallahi et al systemic lupus erythematosus Ferrari et al Antiphospholipid syndrome Versini sarcoidosis Fazzi et al the autoimmune inflammatory syndrome induced by adjuvants Watad et al rheumatoid arthritis Bliddal et al Hepatitis C Virus and mixed cryoglobulinemia Ferri et al and psoriathic arthritis Ruffilli et al Furthermore peculiar aspects associated with post partum thyroiditis have been reviewed too Di Bari et al Le Donne et al The exact pathogenetic mechanisms underlying the above reported associations are not completely known It has been hypothesized that the influence of genetic Copped and environmental factors Antonelli and Benvenga could lead to the onset of autoimmune phenomena in different organs in the same subject characterized by predominance of a Th1 immune pattern at the beginning and in the active phase of these disorders In conclusion an association of other autoimmune diseases in patients with thyroid autoimmunity has been shown and this Research Topic provides an extensive update of the literature and suggests interesting points for new investigations

Translational Autoimmunity, Volume 3 Nima Rezaei,2022-04-01 Translational Autoimmunity Autoimmune Diseases in Different Clinical Settings addresses autoimmunity and associated conditions such as aging infectious diseases cancer neurodegeneration psychological disorders fertility inflammatory vascular diseases and interstitial lung diseases The book addresses sufficiently basic questions on how the immune system is designed to distinguish self from no self and behave such that it s able to maintain self tolerance how does it work in infections and how it elicits an auto reactive state and develops self antigens seen in autoimmune conditions This is followed by an overview on the genetic and clinical aspects of the spectrum of autoimmune diseases which are broadly categorized into two types of organ specific autoimmune diseases and non organ specific autoimmune diseases also known as systemic autoimmune diseases Covers clinical aspects of autoimmunity and translational immunology studies in autoimmunity in different clinical settings Meets the needs of basic scientists clinicians translational scientists and industry partners Supported by a systematic appraisal of the most recent evidence

Therapeutic Immunosuppression A.W. Thomson,2012-12-06 Therapeutic immunosuppression has very broad applications in clinical medicine ranging from prevention and treatment of organ and bone marrow transplant rejection management of various autoimmune disorders e g rheumatoid arthritis skin disease and asthma Whereas traditionally only a small repertoire of immunosuppressive agents was available for clinical use recent discoveries have significantly increased the number of approved agents resulting in numerous trials to further evaluate their potential In addition products of the biotechnology industry monoclonal antibodies cytokines cytokine antagonists and other products of genetic engineering that target key molecular pathways in disease pathogenesis have either already made or are on the verge of making an important impact on treatment There is also considerable interest in the potential of cell based therapies particularly hematopoietic stem and dendritic cell therapy of allo and autoimmunity Important recent advances in the immunotherapy of allergic diseases are also covered in this book Gene therapy offers considerable promise for suppressing pathogenic processes in either transplantation or autoimmune disorders The possibility of combining these important new advances to maximize benefit to the patient and to minimize possible untoward effects which are also given extensive coverage in this book is one of the most exciting challenges of contemporary medicine This volume is intended both for practising physicians and surgeons and for biomedical scientists at the graduate postdoctoral levels and is designed to provide the theory behind these various approaches to immunosuppression and to provide state of the art reviews of current developments in each area Each chapter is contributed by one or more experts in the field There was a need to bring this information together in a single volume as much of the key recent developments have been dispersed throughout the biomedical literature largely in specialized journals Since as in the past important developments in immunosuppressive therapy in one branch of medicine i e transplantation are likely to benefit another e g dermatology rheumatology gastroenterology cross disciplinary coverage of the mechanistic basis of the various therapeutic strategies in a single volume
