## INTRODUCTION<sup>\*</sup>

Writing an introduction to the works of a great author is similar perhaps to introducing a distinguished speaker to an audience eager to listen to the star of the evening and not one bit interested in the drabness of the introduction. In preparing this short text, therefore, I feel uncomfortably sandwiched between a lucid and effective Foreword by a distinguished economist -- Professor Robert Pindyck -- and the rich creation of Professor Mohan Munasinghe based on years of thought, analysis and insightful probing into the energy problems facing the world. However, since I have the honor of contributing the introduction to this admirable piece of work, I shall attempt to do full justice to my task.

Before I get into the substance of the enormous range of subjects covered by Mohan, I must pay adequate tribute to the professional *par excellence* in him. Each one of us has memories of that one great teacher who, through his brilliance and mastery of the subject, could explain the most complex of ideas and analyses in the simplest terms. Professor Munasinghe's writings are typically those of that great teacher -- covering the most intricate and difficult issues with the facility and ease of a master.

The other general impression which I have gathered from the valuable material contained in this volume relates to the great industry, zeal, and dedication of the man. Most of us hold talks and lectures at many training programs and workshops, but I have run into very few who do not follow the general practice of putting a few things together at the last minute and presenting a rehash of what they have been saying for the past several years. Often the applause that one receives at the end of such a talk lulls one into a feeling of false accomplishment, tempting one to repeat the process at the next opportunity. One gains a facility with words and delivery, which over time becomes a substitute for profound analysis and original thinking. It is apparent from the lectures delivered by Professor Munasinghe, some of which are included in this book, that he treats each such event as a professional challenge and as an opportunity to produce a work of original scholarship and rigorous analysis. Herein lies his strength, which undoubtedly is evidence of his dedication to perfection.

The material presented in this volume has general relevance to energy analysts and policymakers throughout the world, but has a special appeal for those dealing with this area in the developing countries. This Third World emphasis reflects not only the author's own interests and concerns, but has merit of its own, since the developing countries face unprecedented challenges in the energy sector, which can only be met through analysis and innovation of the highest order.

The most difficult challenge facing Third World countries lies in the growing demand for finance that those dealing with energy sector decisions have to contend with. This challenge results not only from a rapid increase in demand for energy, and therefore, for supply capacity, but also from the growing capital intensity of the energy supply industry. The problems to be solved are, therefore, manifold.

Firstly, energy sector organizations in the developing countries must achieve economic efficiency in their investment decisions and operations through the practice of rational economic principles. Secondly, supply capacity enhancement must be
