Reconstructing Project Management Peter W. G. Morris, 2013-05-28 This hugely informative and wide ranging analysis on the management of projects past present and future is written both for practitioners and scholars Beginning with a history of the discipline s development Reconstructing Project Management provides an extensive commentary on its practices and theoretical

underpinnings and concludes with proposals to improve its relevancy and value. Written not without a hint of attitude, this is by no means simply another project management textbook. The thesis of the book is that it all depends on how you define the subject: that much of our present thinking about project management as traditionally defined is sometimes boring, conceptually weak, and of limited application, whereas in reality it can be exciting, challenging, and enormously important. The book draws on leading scholarship and case studies to explore this thesis. The book is divided into three major parts. Following an Introduction setting the scene, Part 1 covers the origins of modern project management, how the discipline has come to be what it is, typically said to be how it has been constructed, and the limitations of this traditional model. Part 2 presents an enlarged view of the discipline and then deconstructs this into its principal elements. Part 3 then reconstructs these elements to address the challenges facing society and the implications for the discipline in the years ahead. A final section reprises the sweep of the discipline's development and summarises the principal insights from the book. This thoughtful commentary on project and program and portfolio management as it has developed and has been practiced over the last 60 plus years, and as it may be over the next 20 to 40, draws on examples from many industry sectors around the world. It is a seminal work required reading for everyone interested in projects and their management.

Department of the Interior and Related Agencies Appropriations for Fiscal Year 1992, United States Congress, Senate, Committee on Appropriations, Subcommittee on the Department of the Interior and Related Agencies, 1992

The Role of Public Agencies in Fostering New Technology and Innovation in Building, National Research Council, Division on Engineering and Physical Sciences, Commission on Engineering and Technical Systems, Committee on New Technology Innovation in Building, 1992-02-01. This book explores innovation in the U.S. construction-related industries, i.e., design services, construction, building materials, and products manufacture, and facilities operation and maintenance, and recommends a strategy for fostering new technology. These industries account for about ten percent of the U.S. economy; federal agencies themselves spend some 15 billion annually on construction. A government strategy based on federal agencies that encourage applications of new technology for their own projects, activities to enhance the pursuit and effective transfer of new technology to the U.S. private sector, and increased support for targeted efforts to develop new technologies in specific areas will yield many benefits. These include better cost, quality, and performance in government facilities, generally improved quality of life, and enhanced U.S. industrial competitiveness in international markets.
