Excerpt from *Descriptive Geometry for Students in Engineering Science and Architecture* A Carefully Graded Course of Instruction Section 1 In Descriptive Geometry the object is chiefly to prepare drawings as follows Those which will display or describe by different views any object or arrangement of lines or figures discussed b Those which will by various analytical and constructive methods and operations discover or disclose facts as to shapes inclinations appearances sizes etc and c Those which will represent planes and how they may be disposed to one another The views mentioned above in a are projections and are made on what are called planes of projection The same projection planes two in number are also made use of in the discussion of planes referred to in c lines being drawn over the planes of projection and made to represent other planes in various attitudes with respect to the projection planes The planes of projection are the Horizontal Plane and the Vertical Plane These are considered as being fixed and the lines planes figures or objects are considered as having a relation to them near or otherwise as to distance inclined or otherwise as to altitude The drawings made either represent points lines figures or objects by views thrown perpendicularly on to these planes of projection the H P and the V P as they are commonly called or they indicate the intersection of the planes of projection by lines and planes About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books Find more at [www.forgottenbooks.com](http://www.forgottenbooks.com) This book is a reproduction of an important historical work Forgotten Books uses state of the art technology to digitally reconstruct the work preserving the original format whilst repairing imperfections present in the aged copy In rare cases an imperfection in the original such as a blemish or missing page may be replicated in our edition We do however repair the vast majority of imperfections successfully any imperfections that remain are intentionally left to preserve the state of such historical works

Excerpt from *Descriptive Geometry for Students of Engineering* This book is the result of teaching descriptive geometry to students of engineering My aim is to present the subject so as to make it most easily applicable to the requirements of recent

engineering practice The methods of presentation in this book therefore are not traditional Experience has shown that most students in our best technical schools have difficulty in applying their knowledge of this subject to subsequent work in structural and machine design Two things have been attempted in this book to overcome this failure of our students 1 The notation is essentially the same as that used in mechanical drawing For a long time practical drafting and descriptive geometry have had too little in common 2 The exercises have been carefully graded to encourage a student to do thinking for himself and to stimulate his interest many concrete exercises showing usually practical applications have been inserted Such exercises I think should be introduced from the beginning so that the student may see the practical application of his problems as he goes along The data for the exercises are stated by the system of coordinates used in analytic geometry Reasons for choosing this system are obvious For a class beginning this subject there is a great advantage in stating the exercises with absolute definiteness If a definite problem is not given many students in order to show a satisfactory solution will waste much time selecting data and others will present drawings that for their complication are mostly unintelligible About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books Find more at [www.forgottenbooks.com](http://www.forgottenbooks.com) This book is a reproduction of an important historical work Forgotten Books uses state of the art technology to digitally reconstruct the work preserving the original format whilst repairing imperfections present in the aged copy In rare cases an imperfection in the original such as a blemish or missing page may be replicated in our edition We do however repair the vast majority of imperfections successfully any imperfections that remain are intentionally left to preserve the state of such historical works

in the Draughting Room The aim of this work is to make Descriptive Geometry an integral part of a course in Mechanical or Engineering Drawing The older books on Descriptive Geometry are geometrical rather than descriptive Their authors were interested in the subject as a branch of mathematics not as a branch of drawing Technical schools should aim to produce engineers rather than mathematicians and the subject is here presented with the idea that it may fit naturally in a general course in Mechanical Drawing It should follow that portion of mechanical Drawing called Line Drawing whose aim is to teach the handling of the drawing instruments and should precede courses specializing in the various branches of drawing such as Mechanical Structural Architectural and Topographical Drawing or the Laying Off of ship lines The various branches of drawing used in the different industries may be regarded as dialects of a common language A drawing is but a written page conveying by the use of lines a mass of information about the geometrical shapes of objects impossible to describe in words without tedium and ambiguity In a broad sense all these branches come under the general term Descriptive Geometry It is more usual however to speak of them as branches of Engineering Drawing and that term may well be used as the broad label The term Descriptive Geometry will be restricted therefore to the common geometrical basis or ground work on which the various industrial branches rest This ground work of mathematical laws is unchanging and permanent The branches of Engineering Drawing have each their own abbreviations and special methods adapting there to their own particular fields and these conventional methods change from time to time keeping pace with changing industrial methods Descriptive Geometry though unchanged in its principles has recently undergone a complete change in point of view About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books Find more at [www.forgottenbooks.com](http://www.forgottenbooks.com) This book is a reproduction of an important historical work Forgotten Books uses state of the art technology to digitally reconstruct the work preserving the original format whilst repairing imperfections present in the aged copy In rare cases an imperfection in the original such as a blemish or missing page may be replicated in our edition We do however repair the vast majority of imperfections successfully any imperfections that remain are intentionally left to preserve the state of such historical works
