## Founding Fish:

**The Founding Fish** John McPhee, 2002-10-13 A study of the American shad traces its annual migrations and life cycle in both freshwater rivers and the ocean focusing on those living in the Delaware River and discussing issues related to tidal power and catch and release campaigns      The American Shad John McPhee, 2004-01-01      **Looking for a Story** Noel Rubinton, 2025-05-13 An annotated bibliography that documents the work of the longtime New Yorker writer journalist Pulitzer Prize winner and Princeton professor John McPhee      *Structures Assisting the Migrations of Non-salmonid Fish* Dmitri? Sergeevich Pavlov, 1989-01-01      **Southern Rivers** R. Scot Duncan, 2024-03-15 In Southern Rivers Restoring America's Freshwater Biodiversity R. Scot Duncan explores the environmental history and future of the rivers of the southeastern United States. These river systems are the epicenter of North American freshwater biodiversity and the top global hotspot for several aquatic taxa including mussels, turtles, snails, crayfish, and temperate zone fish. These rivers also play a prominent role in the region's history, culture, and economy. Unfortunately, centuries of industrialization have impaired the region's river systems, sacrificing biodiversity and compromising their ability to provide essential ecosystem services like drinking water, waste disposal, irrigation, navigation, and power production to human communities. And now, overall waterflow is diminishing in the Southeast due to increasing heat and drought brought by climate change. As these and other threats to the region's water supply increase, it may seem necessary to prioritize between using water for natural resource conservation or reserving it for human concerns, but Duncan argues this is a false choice. Combining nature science and stories in a series of short illustrated chapters, Southern Rivers takes readers on an illuminating journey of the Southeast's river systems and the many communities that depend on them. Duncan cogently articulates the challenges threatening rivers, streams, and wetlands in the face of the planet's accelerating climate and extinction crises, then turns to explore the new solutions conservationists and water managers have developed to preserve them. Ultimately, the book is both a call to action and a clear, comprehensive practical plan to help the Southeast save its water resources and adapt to climate change by restoring the very biodiversity that is now under threat.      *Fishes* Gene Helfman, Bruce Collette, 2011-11-03 One fish, two fish, red fish, nearly thirty thousand species of fish, or fishes, as they are properly called, when speaking of multiple species. This is but one of many things the authors of this fascinatingly informative book reveal in answering common and not so common questions about this ubiquitous group of animals. Fishes range in size from tiny gobies to the massive Ocean Sunfish, which weighs thousands of pounds. They live in just about every body of water on the planet. Ichthyologists Gene Helfman and Bruce Collette provide accurate, entertaining, and sometimes surprising answers to over 100 questions about these water dwellers, such as: How many kinds of fishes are there? Can fishes breathe air? How smart are fishes? Do fishes feel pain? They explain how bony fishes evolved, the relationship between them and sharks, and why there is so much color variation among species. Along the way, we also learn about the Devils Hole Pupfish, which has the smallest range of any vertebrate in the world. Lota

lota the only freshwater fish to spawn under ice the Candiru a pencil thin Amazonian catfish that lodges itself in a very personal place of male bathers and must be removed surgically and many other curiosities With over 100 photographs including two full color photo galleries and the most up to date facts on the world s fishes from two premier experts this fun book is the perfect bait for any curious naturalist angler or aquarist      **Oceans** Jon Bowermaster,2010-04-13 This unique tie in to the major motion picture Oceans presented by Disney National Geographic explores the health of the oceans and reveals what people can do to improve the health of our seas      **Fly Fishing & Conservation in Vermont** Tim Traver,2020-03-09 Vermont is an angler s paradise but few pause to consider the past and future impact that conservation has had on trout fishing Writer angler and conservationist Tim Traver combines the latest fisheries science with well seasoned opinions on the storied past evolving present and hopeful future of this worthy pursuit Become part of a long running stewardship and restoration story with a history of success and a challenging future This is fishing journalism at its best with stories and resources that are sure to whet your appetite for exploring the rivers streams and lakes in the most rural corners of the state A portion of the proceeds from the sale of this book supports the work of the White River Partnership and Vermont River Conservancy      **Shifting Baselines in the Chesapeake Bay** Victor S. Kennedy,2018-11-01 This environmental history of America s largest estuary provides insight into how and why its former productivity and abundant fisheries have declined The concept of shifting baselines changes in historical reference points used in environmental assessments illuminates a foundational challenge when evaluating the health of ecosystems and seeking to restore degraded wildlife populations In this important book Victor S Kennedy examines the problem of shifting baselines for one of the most productive aquatic resources in the world the Chesapeake Bay Kennedy explains that since the 1800s when the Bay area was celebrated for its aquatic bounty harvest baselines have shifted downward precipitously Over the centuries fishers and hunters supported by an extensive infrastructure of boats gear and processing facilities overexploited the region s fish crustaceans terrapin and waterfowl squandering a profound resource Beginning with the colonial period and continuing through the twentieth century Kennedy gathers an unparalleled collection of scientific resources and eyewitness reports by colonists fishers managers scientists and newspaper reporters to create a comprehensive examination of the Chesapeake s environmental history Focusing on the relative productivity and health of its fisheries and wildlife and highlighting key species such as shad oysters and blue crab Shifting Baselines in the Chesapeake Bay helps readers understand the remarkable extent of the Bay s natural resources in the past so that we can begin to understand what has changed since and why Such knowledge can help illustrate the Bay s potential fertility and stimulate efforts to restore this pivotal maritime system s ecological health and productivity      **Poison Powder** Gregory S. Wilson,2023-04-01 In 1975 workers at Life Science Products a small makeshift pesticide factory in Hopewell Virginia became ill after exposure to Kepone the brand name for the pesticide chlordane They made the poison under contract for a much larger Hopewell

company Allied Chemical Life Science workers had been breathing in the dust for more than a year Ingestion of the chemical made their bodies seize and shake News of ill workers eventually led to the discovery of widespread environmental contamination of the nearby James River and the landscape of the small working class city Not only had Life Science dumped the chemical but so had Allied when the company manufactured it in the 1960s and early 1970s The resulting toxic impact was not only on the city of Hopewell but also on the faraway fields where Kepone was used as an insecticide Aspects of this environmental tragedy are all too common corporate avarice ignorance and regulatory failure combined with race and geography to determine toxicity and shape the response But the Kepone story also contains some surprising medical legal and political moments amid the disaster With Poison Powder Gregory S Wilson explores the conditions that put the Kepone factory and the workers there in the first place and the effects of the poison on the people and natural world long after 1975 Although the manufacture and use of Kepone is now banned by the Environmental Protection Agency organochlorines have long half lives and these toxic compounds and their residues still remain in the environment **Invitation to**

**Where the Wild Things Were** William Stolzenburg, 2011-01-15 For years predators like snow leopards and white tipped sharks have been disappearing from the top of the food chain largely as a result of human action Science journalist Will Stolzenburg reveals why and how their absence upsets the delicate balance of the world s environment

*Advances in aquaculture hatchery technology* S.J. Rowland, 2013-02-19 Freshwater fishes are one of the great natural resources of the world but anthropogenic activities have adversely affected aquatic ecosystems and many species are threatened with extinction Throughout the 1900s the distribution and abundance of native freshwater fishes in inland and coastal drainages in southeastern Australia were significantly reduced and there were extirpations of some populations This chapter reviews these declines and the use of captive breeding and stocking programmes since the late 1970s to aid the recovery of threatened species establish and maintain large recreational fisheries and restore lost biodiversity The successes of these programmes have been due to the development of best practices for broodfish management artificial breeding larval rearing fingerling production and management of infectious diseases and guidelines which minimise the effects of domestication maintain genetic identity of stocked populations and maximise genetic variation providing a basis for fitness and evolutionary potential of each species

**The Atlantic Coast** Harry Thurston, 2011 Presents a look at the northern Atlantic Coast of North America describing its ecosystems forest realms geological structures the fish bird and plant life that flourish there and the conservation efforts that have been made to preserve it

*Running Silver* John Waldman, 2013-10-15 That one could walk drishod on the backs of schools of salmon shad and other fishes moving

up Atlantic coast rivers was a not uncommon kind of description of their migratory runs during early Colonial times. Accounts tell of awe inspiring numbers of spawners pushing their way upriver the waters running silver to complete life cycles that once replenished critical marine fisheries along the Eastern Seaboard. This is a hugely important fascinating and unique look at the fish of North America whose history and life cycles and conservation challenges are poorly understood. Despite these primordial abundances over the centuries these stocks were so stressed that virtually all are now severely depressed with many biologically or commercially extinct and some simply forgotten. Running Silver will tell the story of the past present and future of these sea river fish. This important book will elevate public consciousness of the contrasts between the historical and the present to show the enormous legacy that has already been lost and to help inspire efforts to save what remains. Drawing on the author's thirty year career as a scientist and educator with a passion for the native river fish of the North East, Running Silver tells the story of these endangered fish with a mix of research historical accounts anecdotes personal experience interviews and images.

**Cattle Country** Kathryn Cornell Dolan, 2021-06 As beef and cattle production progressed in nineteenth century America the cow emerged as the nation's representative food animal and earned a culturally prominent role in the literature of the day. In Cattle Country Kathryn Cornell Dolan examines the role cattle played in narratives throughout the century to show how the struggles within U.S. food culture mapped onto society's broader struggles with colonization environmentalism U.S. identity ethnicity and industrialization. Dolan examines diverse texts from Native American African American Mexican American and white authors that showcase the zeitgeist of anxiety surrounding U.S. identity as cattle gradually became an industrialized food source altering the country's culture while exacting a high cost to humans animals and the land. From Henry David Thoreau's descriptions of indigenous cuisines as a challenge to the rising monoculture to Washington Irving's travel narratives that foreshadow cattle replacing American bison in the West to Mar a Amparo Ruiz de Burton's use of cattle to connect race and imperialism in her work authors preoccupations with cattle underscored their concern for resource depletion habitat destruction and the wasteful overproduction of a single breed of livestock. Cattle Country offers a window into the ways authors worked to negotiate the consequences of the development of this food culture and by excavating the history of U.S. settler colonialism through the figure of cattle sheds new ecocritical light on nineteenth century literature.
