Foundry Processes Their Chemistry And Physics:

Foundry Processes Seymour Katz, 2012-12-06 For a number of years it has been a General Motors Research Laboratories custom to hold a symposium on a subject which is new and emerging and to invite the best people in the world in that subject to come together to talk to each other Initially I had some difficulty in regarding foundry processes as a new and emerging subject Copper alloys have been in foundry practice for about six thousand years Foundrymen working with those alloys have been recognized as such for nearly all that time Iron has a much shorter history probably only three or four thousand years So what's new What is new is that a subject which has always been so complex and so difficult that it could only be a craft skill with bits and pieces of knowledge and bits and pieces of insight has begun to yield to new abilities to solve very complex problems We do this now because we can handle great amounts of data by computational means using new and more complicated theoretical treatments than we could deal with before In fact we have a new technology with which we can attack these terribly difficult problems Thus foundry processing is becoming a new subject because new things can be done with it
