Divided into three parts this volume focuses on a summary of how relativity theories were born It also discusses the ramifications of general relativity such as black holes space time singularities gravitational waves the large scale structure of the cosmos and more It includes summaries of radical changes in the notions of space and time      *Space and Time* Hermann Minkowski, 2013-08-27 This is the first publication in German or English of Hermann Minkowski's three papers on relativity together The Relativity Principle lecture given at the meeting of the Göttingen Mathematical Society on November 5 1907 This is the first English translation The Fundamental Equations for Electromagnetic Processes in Moving Bodies lecture given at the meeting of the Göttingen Scientific Society on December 21 1907 New translation Space and Time lecture given at the 80th Meeting of Natural Scientists in Cologne on September 21 1908 New translation      *Space, Time and Gravitation - An Outline of the General Relativity Theory* Arthur Eddington, 2013-03-06 Written by the English astrophysicist Sir Arthur Eddington 1882 1944 and originally published in 1920 Space Time and Gravitation outlines the general theory of relativity in astrophysics This fascinating early work navigates Einstein's theory through a series of perspectives that of the experimental physicist pure mathematician and relativist making it a wonderful read for the student teacher or astrophysics enthusiast today Contents include Arthur Eddington Preface Prologue What Is Geometry 1 The Fitzgerald Contraction 2 Relativity 3 The World of Four Dimensions 4 Fields of force 5 Kinds of Space 6 The New Law of Gravitation and the Old Law 7 Weighing Light 8 Other Tests of the Theory 9 Momentum and Energy 10 towards infinity 11 Electricity and Gravitation 12 On The Nature of Things Appendix Mathematical Notes Historical Note This classic text is being republished in a modern and affordable edition complete with reproductions of the original illustrations and a specially written concise biography      Lectures on General Relativity A. Papapetrou, 1974-11-30 This book is an elaboration of lecture notes for the graduate course on General Relativity given by the author at Boston University in the spring semester of 1972 It is an introduction to the subject only as the time available for the course was limited The author of an introduction to General Relativity is faced from the beginning with the difficult task of choosing which material to include A general criterion assisting in this choice is provided by the didactic character of the book Those chapters have to be included in priority which will be most useful to the reader in enabling him to understand the methods used in General Relativity the results obtained so far and possibly the problems still to be solved This criterion is not sufficient to ensure a unique choice General Relativity has developed to such a degree that it is impossible to include in an introductory textbook of a reasonable length even a very condensed treatment of all important problems which have been discussed until now and the author is obliged to decide in a more or less subjective manner which of the more recent developments to omit The following lines indicate by means of some examples the kind of choice made in this book      *Space, Time and Gravitation* Sir Arthur Stanley Eddington, 1920      *Spacetime and Geometry* Sean M. Carroll, 2019-08-08 Spacetime and Geometry is an introductory textbook on general relativity specifically aimed at students

Using a lucid style Carroll first covers the foundations of the theory and mathematical formalism providing an approachable introduction to what can often be an intimidating subject Three major applications of general relativity are then discussed black holes perturbation theory and gravitational waves and cosmology Students will learn the origin of how spacetime curves the Einstein equation and how matter moves through it the geodesic equation They will learn what black holes really are how gravitational waves are generated and detected and the modern view of the expansion of the universe A brief introduction to quantum field theory in curved spacetime is also included A student familiar with this book will be ready to tackle research level problems in gravitational physics
