Fourier Vision Segmentation And Velocity Measurement Using The Fourier Transform:

Fourier Vision David Vernon, 2001-06-30 *Fourier Vision* provides a new treatment of figure ground segmentation in scenes comprising transparent translucent or opaque objects Exploiting the relative motion between figure and ground this technique deals explicitly with the separation of additive signals and makes no assumptions about the spatial or spectral content of the images with segmentation being carried out phasor by phasor in the Fourier domain It works with several camera configurations such as camera motion and short baseline binocular stereo and performs best on images with small velocities displacements typically one to ten pixels per frame The book also addresses the use of Fourier techniques to estimate stereo disparity and optical flow Numerous examples are provided throughout *Fourier Vision* will be of value to researchers in image processing computer vision and especially to those who have to deal with superimposed transparent or translucent objects Researchers in application areas such as medical imaging and acoustic signal processing will also find this of interest

Handbook of Fourier Analysis & Its Applications Robert J. Marks, 2009-01-08 This practical applications based professional handbook comprehensively covers the theory and applications of Fourier Analysis spanning topics from engineering mathematics signal processing and related multidimensional transform theory and quantum physics to elementary deterministic finance and even the foundations of western music theory

Geometry-Driven Diffusion in Computer Vision Bart M. Haar Romeny, 2013-03-14 Scale is a concept the antiquity of which can hardly be traced Certainly the familiar phenomena that accompany scale changes in optical patterns are mentioned in the earliest written records The most obvious topological changes such as the creation or annihilation of details have been a topic to philosophers artists and later scientists This appears to of fascination be the case for all cultures from which extensive written records exist For th instance chinese 17 c artist manuals remark that distant faces have no eyes The merging of details is also obvious to many authors e g Lucretius mentions the fact that distant islands look like a single one The one topological event that is to the best of my knowledge mentioned only late by th John Ruskin in his *Elements of drawing* of the mid 19 c is the splitting of a blob on blurring The change of images on a gradual increase of resolution has been a recurring theme in the arts e g the poetic description of the distant armada in Calderon s *The Constant Prince* and this mystery as Ruskin calls it is constantly exploited by painters
