

Anatomy of the Respiratory System

Upper and Lower Respiratory System Structures

1. Identify the following structures of the respiratory system (upper and lower respiratory system):

2. The upper respiratory system includes the nasal cavity, oral cavity, and pharynx. The lower respiratory system includes the larynx, trachea, bronchi, and lungs.

3. The epiglottis is a cartilaginous structure that prevents food from entering the trachea.

The vocal cords are located in the larynx. They are responsible for producing sound. The trachea is a tube that carries air from the larynx to the bronchi. The bronchi are two tubes that branch off from the trachea and lead to the lungs.

4. The lungs are responsible for exchanging oxygen and carbon dioxide in the body.

The alveoli are small air sacs in the lungs where gas exchange occurs. They are surrounded by a network of blood vessels. The diaphragm is a muscle that contracts and relaxes to move air in and out of the lungs. The pleural cavity is the space between the two lungs, and the pleural fluid is a lubricating fluid that allows the lungs to move smoothly.
