Highsmith, 2013-03-09 A unique integrated collection of original contributions on the molecular biology physiology and pathology of endothelin Leading academic clinical and industrial researchers summarize the dramatic recent progress in endothelin research and indicate the optimal direction of future studies The contributors produce a critical evaluation of endothelin chemistry and pharmacology its mechanism of action and its physiological functions The book is certain to become the new standard reference source for both basic scientists and informed clinicians who want a clear idea of the roles endothelin may play in cardiovascular physiology and pathology

Vascular Endothelium in Human Physiology and Pathophysiology Patrick J Vallance, David J. Webb, 2003-09-02 Endothelial dysfunction is now regarded as an early marker of vascular disease and therefore an important target for therapeutic intervention and discovery of novel treatments Ideal for both basic and clinical scientists whether in industry or academia and physicians Vascular Endothelium in Human Physiology and Pathophysiology provides an up to date review of the vascular functions of the endothelium and its role in key areas of cardiovascular disease It focuses on evidence from studies in humans

Pharmacology and Therapeutics in the New Millennium S.K. Gupta, 2001-09-30 During the past several years tremendous advancements have been made in the field of pharmacology and therapeutics While new therapeutic strategies are coming up old ones are being improved by modifications or being replaced with newer ones The major topics covered in this book include endothelins current topics in cardiovascular research molecular pharmacology recent developments in cancer research antioxidants oxidants and human disease herbal drugs developments in neuropharmacology myelin biology and demyelinating disease pharmacovigilance role of cytokines in health and disease ocular pharmacology detoxification of xenobiotics biotransformation and transport and

several other topics of current interest The aim of this book is to fulfill the needs of the basic and clinical researchers as well as the students particularly related to areas of current interest in pharmacology and therapeutics

Cytokines and Cell Homeostasis in the Gastrointestinal Tract T. Andus, 2000-11-30 The gastrointestinal tract has a number of unique features Its extensive surface is formed by a single layer of rapidly renewing cells the intestinal epithelial cells These cells are in contact with a number of other cell populations including the largest part of the immune system and with an excessive luminal antigen load including vast numbers of bacteria Furthermore two more organs namely liver and pancreas are part of the system The rapid renewal of the epithelial layer the interactions of different cell types and the balance between cell proliferation and death have been fascinating subjects of studies in recent years Much has been learned and cytokines have emerged as important mediators for all these interactions and homeostatic systems This book the proceedings of the Falk Symposium 113 on Cytokines and Cell Homeostasis in the Gastrointestinal Tract held in Regensburg Germany 16 18 September 1999 provides a forum for basic scientists and interested clinicians to exchange ideas to discuss concepts and to plan further studies

Concise Dictionary of Pharmacological Agents I.K. Morton, Judith M. Hall, 2012-12-06 The purpose of this dictionary is to provide a convenient and affordable personal desk reference resource The authors who have many years experience in pharmacological research teaching and editing recognized a need for a single up to date volume encompassing material that hitherto could be gathered only from a well stocked library This book comprises two main sections an A Z listing of drugs and their properties and a descriptive glossary of technical terms The level and scope of this reference material will make it essential for pharmacologists and medicinal chemists from the graduate student to established worker It should also be valuable to workers in allied biomedical disciplines such as biochemistry and physiology medical students and science writers and editors Scope The dictionary is centred on pharmacologically active agents Workers in drug related disciplines need to correctly identify individual agents from an arsenal of pharmacologically active compounds each with a number of alternative drug names according to the country or naming convention

Vascular Protection Gabor M. Rubanyi, Victor J. Dzau, John P. Cooke, 2002-02-21 Vascular Protection explores advances in vascular biology and how they translate into innovations in drug therapy for vascular disease It addresses recent advances in the knowledge of endothelial vasoactive factors and other biologically active molecules as well as gene therapy Written by leading experts in their respective fields each chapter e

Hormone Signaling Vincent Goffin, Paul A. Kelly, 2002-03-31 Multicellular organisms require a means of intracellular communication to organize and develop the complex body plan that occurs during embryogenesis and then for cell and organ systems to access and respond to an ever changing environmental milieu Mediators of this constant exchange of information are growth factors neurotransmitters peptide and protein hormones which bind to cell surface receptors and transduce their signals from the extracellular space to the intracellular compartment Via multiple signaling pathways receptors of this general class affect growth development and differentiation Smaller

hydrophobic signaling molecules such as steroids and non steroid hormones vitamins and metabolic mediators interact with a large family of nuclear receptors These receptors function as transcription factors affecting gene expression to regulate the multiple aspects of animal and human physiology including development reproduction and homeostasis The aim of this book is to cover various aspects of intracellular signaling involving hormone receptors **The Blood-Brain Barrier in Health and Disease, Volume Two** Katerina Dorovini-Zis,2015-10-21 Located at the interface between blood and the brain the blood brain barrier is a dynamic permeability barrier formed by a continuous layer of specialized endothelial cells endowed with important permeability transport and regulatory functions that both protect the internal milieu of the brain and allow essential nutrients to be transported into **Textbook of Pulmonary Vascular Disease** Jason X. -J. Yuan,Joe G.N. Garcia,Charles A. Hales,Stuart Rich,Stephen L. Archer,John B. West,2011-03-24 Textbook of Pulmonary Vascular Diseases combines basic scientific knowledge on the pulmonary circulatory system at levels of the molecule cell tissue and organ with clinical diagnosis and treatment of pulmonary vascular diseases State of the art techniques and their potential applications in research diagnosis and treatment of pulmonary vascular diseases are also covered Texas Heart Institute Journal ,1998

Blood-Brain Barrier David Kobilier,Shlomo Lustig,Shlomo Shapira,2012-12-06 The vasculature of the central nervous system eNS is characterized by the existence of the blood brain barrier BBB which can be regarded as both an anatomical and physiological phenomenon The BBB is formed by a complex cellular system of endothelial cells astroglia pericytes perivascular macrophages and a basal membrane although the anatomic substrate of the BBB is the interendothelial tight junctions that form a continuous sealing The BBB serves as an exquisitely controlled functional gate to the eNS It not only protects the brain from agents in the blood that could impair neurological function but also controls the influx and efflux of numerous substances to maintain proper homeostasis and provide the brain with necessary nutrients The structural and functional integrity of the BBB was shown to be dramatically altered during various diseases of the eNS including neoplasia ischemia trauma hypertension inflammation and epilepsy Recent years research has partially elucidated the mechanisms underlying the development of some of these brain disorders as well as the pathways used by different pathogens like bacteria and viruses to initiate eNS infections The development of in vitro models of the BBB had instrumental role in the understanding of the involvement of the BBB in the pathogenesis of several eNS diseases The intimate functional association between the function of the brain and the activity of the BBB makes the later a target for pharmacological modulation that will expand the therapeutic possibilities for a range of neurological diseases **Pharmacology for Chemists** Joseph G. Cannon,2007 The book is intended for chemists entering medicinal chemistry research who have no knowledge of pharmacology Pharmacological principles and concepts are emphasized rather than a survey of large numbers of specific drugs It is intended to serve as a tool to prepare the reader for further in depth study in many areas of pharmacology

Cannabinoids as Therapeutics Raphael Mechoulam,2006-03-30 Only a few years ago the endocannabinoid system was

unknown Today we are aware that endocannabinoids are involved in many of the functions of the mammalian body in neuroprotection appetite and suckling pain reproduction anxiety memory bone formation etc This volume presents an up to date picture of some of the major fields of endocannabinoid research It summarizes the actions of the endocannabinoids on various physiological systems and opens new therapeutic windows to a large number of diseases The first chapter on the use of Cannabis in India can be viewed as an expression of thanks to the herbal practitioners who for centuries passed on the medical traditions associated with the drug The chapter on chemistry is a short summary of active plant synthetic and endogenous cannabinoids being investigated today many of which are mentioned later in the book Cannabidiol is an unusual cannabinoid it does not bind to the known receptors and yet exerts a variety of effects Hence a chapter is devoted to it Further chapters deal with the endocannabinoid system and the endocannabinoids in a variety of conditions and physiological systems The concluding chapter describes the research done on Sativex a standardized plant extract shortly to be introduced in Canada as a drug for multiple sclerosis The intended audience is drug researchers medicinal chemists pharmacologists clinicians neuroscientists physiologists and clinicians interested in the effect of the endocannabinoid system in various physiological systems

International Review of Cytology, 2001-06-12 International Review of Cytology presents current advances and comprehensive reviews in cell biology both plant and animal Articles address structure and control of gene expression nucleocytoplasmic interactions control of cell development and differentiation and cell transformation and growth Authored by some of the foremost scientists in the field each volume provides up to date information and directions for future research

Hormones and the Heart in Health and Disease Leonard Share, 1999-06-01 The maintenance of arterial blood pressure and the distribution of blood flow to the various organs of the body depends on the control of the pumping action of the heart and of the resistance of the vascular beds in the individual organs in accordance with their metabolic needs These controls are achieved through the integrated actions of circulating hormones humoral factors that are synthesized and released in the heart and blood vessels and the autonomic nervous system The heart however is not only the target for the direct and indirect actions of a number of hormones and humoral factors it is also an endocrine organ in the traditional sense synthesizing and secreting into the circulation chemical factors that act at distant sites In this treatise *Hormones and the Heart in Health and Disease* we interpret endocrinology broadly and consider traditional hormones as well as autocoids that are secreted by the heart or that act on it In this overview the relevant chapters are indicated in parentheses The discovery of atrial natriuretic peptide ANP atrial natriuretic factor ANF in the 1980s indicated that the heart does indeed function as an endocrine organ in the classic sense ANP Chapter I is synthesized in the heart and secreted into the circulation for actions on the kidney where it is a potent natriuretic agent and on the vasculature where it causes vasodilation ANP can also affect myocardial contractility

Trends in Brain Cancer Research Andrew V. Yang, 2006 There are two types of brain tumours primary brain tumours that originate in the brain and metastatic secondary brain tumours

that originate from cancer cells that have migrated from other parts of the body Primary brain cancer rarely spreads beyond the central nervous system and death results from uncontrolled tumour growth within the limited space of the skull Metastatic brain cancer indicates advanced disease and has a poor prognosis Primary brain tumours can be cancerous or non cancerous Both types take up space in the brain and may cause serious symptoms e g vision or hearing loss and complications e g stroke All cancerous brain tumours are life threatening malignant because they have an aggressive and invasive nature A non cancerous primary brain tumour is life threatening when it compromises vital structures e g an artery This book brings together the leading research in this dynamic area of research
