the role of aesthetic considerations in the context of discovery and justification of scientific theories Several contributions focus on the concept of beauty as employed by practising scientists the aesthetic factors at play in science and their role in decision making Other essays address the question of scientific creativity and how aesthetic judgment resolves the problem of theory choice by employing aesthetic criteria and incorporating insights from both objectivism and subjectivism The volume also features original perspectives on the role of the sublime in science and sheds light on the empirical work studying the experience of the sublime in science and its relation to the experience of understanding The Aesthetics of Science tackles these topics from a variety of novel and thought provoking angles It will be of interest to researchers and advanced students in philosophy of science and aesthetics as well as other subdisciplines such as epistemology and philosophy of mathematics
