In Search Of Madness Schizophrenia And Neuroscience:

In Search of Madness R. Walter Heinrichs, 2001-03-29 Over the last two decades scientific articles on schizophrenia have doubled in number and prophecies of breakthrough have appeared and receded The result is a scattered and confusing mass of evidence that is difficult to evaluate How much progress has really been made Are the neurological causes of madness truly in sight This book evaluates the progress of schizophrenia science by summarizing what is known about how patients with the illness differ from healthy people The tools of meta analysis are first explained and then employed to make the strength and consistency of these differences explicit Beginning with the study of symptoms then moving through the search for objective disease markers findings on the cognitive functions structure physiology chemistry and development of the brain this book is a journey into the enigma of madness and its science What emerges is an illness that reveals itself most strongly in thought processes not biology As evidence actually becomes weaker and harder to reproduce as research moves from mind to molecule the harvest of dazzling research techniques turns out to be modest or inconsistent Schizophrenia is an anomaly at the frontier of mind and brain but In Search of Madness points the way to its solution Schizophrenia Neil A. Rector, Neal Stolar, Paul Grant, 2011-03-01 From Aaron T Beck and colleagues this is the definitive work on the cognitive model of schizophrenia and its treatment The volume integrates cognitive behavioral and biological knowledge into a comprehensive conceptual framework It examines the origins development and maintenance of key symptom areas delusions hallucinations negative symptoms and formal thought disorder Treatment chapters then offer concrete guidance for addressing each type of symptom complete with case examples and session outlines Anyone who treats or studies serious mental illness will find a new level of understanding together with theoretically and empirically grounded clinical techniques

Visual Dysfunction in Schizophrenia: A View into the Mechanisms of Madness? Randolph Blake, Steven Silverstein, Brian P. Keane, Michael Green, Szabolcs Kéri, 2015-05-11 Research on visual perception in schizophrenia has a long history However it is only recently that it has been included in mainstream efforts to understand the cognitive neuroscience of the disorder and to assist with biomarker and treatment development e g the NIMH CNTRICS and RDoC initiatives Advances in our understanding of visual disturbances in schizophrenia can tell us about both specific computational and neurobiological abnormalities and about the widespread computational and neurobiological abnormalities in the illness of which visual disturbances constitute well studied replicable low level examples Importantly far from being a passive sensory registration process visual perception is active inferential and hypothesis generating and therefore can provide excellent examples of breakdowns in general brain functions in schizophrenia Despite progress made in understanding visual processing disturbances in schizophrenia many challenges exist and many unexplored areas are in need of examination For example the directional relationships between perceptual and cognitive disturbances e g in attention memory executive function predictive coding remain unclear in many cases as do links with symptoms including visual hallucinations The effect of

specific visual disturbances on multisensory integration in schizophrenia has also not been explored. In addition, few studies of vision in schizophrenia have used naturalistic stimuli including real world objects and almost no studies have examined processing during interaction with objects or visual exploration which can provide important data on functioning of the perception for action pathway. Relatedly, studies of visual processing in schizophrenia have also not been conducted within contexts that include emotional stimulation and the presence of reinforcers characteristic of many real world situations and the consequences of this are likely to be an incomplete view of how and when perception is abnormal in the condition. An additional important area involves treatment of visual disturbances in schizophrenia. Two major questions regarding this are 1) can visual processing be improved in cases where it is impaired and by what types of interventions affecting which cognitive and neurobiological mechanisms and 2) what are the clinical and functional benefits of improving specific visual functions in people with schizophrenia. Other important and understudied questions concern 1) the extent to which indices of visual functioning can serve as biomarkers such as predictors of relapse, treatment response and/or recovery, 2) the potential role of visual functioning in diagnosing and predicting illness, 3) the extent to which some visual perception disturbances are diagnostically specific to schizophrenia and 4) the extent to which visual disturbances are truly manifestations of disease as opposed to aspects of normal variation that in combination with disease serves to modify the clinical presentation. This Frontiers Research Topic explores some of these and other issues facing this exciting interface between vision science and schizophrenia research. We include papers that span the entire range of different Frontiers paper types including those that are data driven using psychophysics, electroencephalography, neuroimaging, computational and animal models and other methods, reviews, hypotheses, theories, opinion, methods, areas of impact and historical perspectives.

Cézanne's Gravity
Carol Armstrong, 2018-11-13

A transformative study freeing the artist from outdated art historical narratives and revealing his work as newly strange again, *Cézanne's Gravity* is an ambitious reassessment of the paintings of Paul Cézanne, 1839-1906. Whereas previous studies have often looked at the artist's work for its influence on his successors and on the development of abstraction, Carol Armstrong untethers it from this timeline, examining Cézanne's painting as a phenomenological and intellectual endeavor. Armstrong uses an interdisciplinary approach to analyze Cézanne's work, pairing the painter with artists and thinkers who came after him, including Roger Fry, Virginia Woolf, Albert Einstein, Maurice Merleau-Ponty, Rainer Maria Rilke, R.D. Laing, and Helen Frankenthaler. Through these pairings, Armstrong addresses diverse subjects that illuminate Cézanne's painting from the nonlinear narratives of modernist literature and the ways in which space and time act on objects to color sensation and the schizophrenic mind. *Cézanne's Gravity* attends to both the physicality of the artist's works and the weight they bear on the history of art. This distinctive study not only invites its readers to view Cézanne's paintings with fresh eyes but also offers a new methodology for art historical inquiry outside linear narratives, one truly fitting for our time.

Interdisciplinary Anthropology Wolfgang Welsch, Wolf Singer, André Wunder, 2011-03-23 This volume is the result of a research project entitled Evolutionary Continuity Human Specifics The Possibility of Objective Knowledge that was carried out by representatives of six academic disciplines evolutionary biology evolutionary anthropology brain research cognitive neuroscience cognitive psychology and philosophy over a period of three and a half years The starting point for the project was the newly emerging riddle of human uniqueness though the uniqueness of human beings is undisputable all explanations for this fact have successively been discarded or refuted in recent decades There is no special factor that could explain the particularities of human existence Rather all human skills derive from a continuous relation to pre human skills that is to say to elements that were developed earlier in the phylogeny and were later inherited But starting from abilities that are anything but special how could the particularity of human beings have evolved This was the guiding question of the project In this work we try to answer it by addressing the following problems How strong is evolutionary continuity in human beings How can we understand that it gave way to cultural discontinuity Which aspect of cultural existence is really unique to humans Can the possibility of objective knowledge be seen as a admittedly extreme case in point The answers are meant to help clarify the central issue of contemporary scientific anthropology

Effort Jay Schulkin, 2020-08-26 In Effort A Behavioral Neuroscience Perspective on the Will author Jay Schulkin presents a two fold thesis there is no absolute separation of the cognitive and non cognitive brain and there are diverse cognitive systems many of which are embodied in motor systems that underlie self regulation Central to this thesis is that dopamine is the one neurotransmitter that underlies the diverse senses of effort and is apparent in most everyday activity whether solving a problem in our head or moving about As scientific literature abounds with studies of decision making and effort this book emphasizes the importance of demythologizing our understanding of cognitive systems in order to link motivation behavioral inhibition self regulation and will Effort will benefit researchers and students in neuroscience behavioral neuroscience cognitive psychology clinical psychology social psychology as well as anyone with interest in this topic

«Remov'd from human eyes»: Madness and Poetry 1676-1774 Natali, Ilaria, 2016-08-30 The years 1676 and 1774 marked two turning points in the social and legal treatment of madness in England In 1676 London's Bethlehem Hospital expanded in grand new premises and in 1774 the Madhouses Act attempted to limit confinement of the insane This study explores almost a century of the English history of madness through the texts of five poets who were considered mentally troubled according to contemporary standards James Carlesse Anne Finch William Collins Christopher

Smart and William Cowper were hospitalized sequestered or exiled from society Their works cope with representations of insanity medical definitions or practices imputed illness and the judging eye of the sane other shedding new light on the discontinuities in the notion of madness of this period

Gurwitsch's Relevancy for Cognitive Science Lester Embree, 2007-09-28 When I heard the rumor that the findings

about the central nervous system obtained with new technology such as Magnetic Resonance Imaging MRI and Positron Emission Tomography PET were too subtle to correlate with the crude results of many decades of behavioristic psychology and that some psychologists were now turning to descriptions of subjective phenomena in William James Edmund Husserl and Maurice Merleau Ponty and even in Buddhism I asked myself Why not Aron Gurwitsch as well After all my teacher regularly reflected on the types basic concepts and methods of psychology worked with Adh mar Gelb and Kurt Goldstein in the institute investigating brain injured veterans at Frankfurt in the 1920s conspicuously employed Gestalt theory to revise central Husserlian doctrines and taught Merleau Ponty a thing or two That the last book from his Nachlass had recently been published and that I had recently written an essay on his theory of 1 psychology no doubt helped crystallize this project for me What is cognitive science At one point in assembling this volume I polled the participants asking whether they preferred the cognitive sciences or cognitive science Most who answered preferred the latter expression There is still some vagueness here for me but I do suspect that cognitive science is 2 another example of what I call a multidiscipline A multidiscipline includes participants who confront a set of issues that is best approached under more than one disciplinary perspective
