Liposomes Drugs And Immunocompetant Cell Functions:

Liposome Technology Gregory Gregoriadis, 2018-01-18 Although the role of liposomes in drug targeting has been discussed extensively in several reviews and books there has been no comprehensive coverage of related methodology This book constitutes the first attempt to put together all aspects of liposome technology as applied to medical sciences Volume II describes procedures for the entrapment of a number of drugs including genetic material into selected types of liposomes

Liposome Drug Delivery Systems Guru V. Betageri, Scott Allen Jenkins, Daniel Parsons, 2024-11-01 Guide to current liposome drug delivery technology Applications preparation pharmacokinetics stability passive and active targeting and industrial production Special emphasis on stealth liposomes liposomes with extended circulation times **Medical**

Applications of Liposomes D.D. Lasic, D. Papahadjopoulos, 1998-07-22 The development of liposomes as a drug delivery system has fluctuated since its introduction in the late 1960s by A D Bangham While academic research of liposomes as a model membrane system has always flourished as the exponential growth of papers can testify the application of these findings to medically useful products has gone through several crises Following the original optimism in the 70s and early 80s a period of severe skepticism ensued at the end of the 80s and beginning of the 90s culminating in a moderate but real optimism in the mid 90s as a result of a successful launch of the first products in the US and Europe In this collection of papers the editors have gathered the most promising ideas approaches applications and commercial developments thereby presenting an up to date compilation of the present status of the field This includes such broad areas as anti cancer chemotherapy immune stimulation and infectious diseases Currently the major areas of progress are in delivery of anti fungal agents by conventional liposomes or lipid based carriers and systemic anticancer therapy using long circulating liposomes The future applications as characterized by the direction of present day research is in specific targeting and delivery of informational molecules such as DNA plasmids genes antisense oligonucleotides or ribozymes Other future developments may be in topical delivery vaccination and in diagnostics Features of this book Contributions from almost all the leading labs in the field Up to date critical reviews bridged by editors introductions Organized into a logical framework

Receptor-Mediated Targeting of Drugs G. Gregoriadis, 2013-06-29 Conventional attempts to control cell behaviour and function are often marred by the toxicity of the drugs used their premature waste or inactivation or by their inability to interact with or reach target sites efficiently New trends in pharmacology emphasize the development of methods for the optimization of drug action for instance by the delivery of drugs enzymes hormones antigens genetic material etc through carrier systems selectively to relevant cellular and subcellular sites A wide assortment of carriers was discussed in the first NATO Advanced Studies Institute ASI Targeting of Drugs the proceedings of which were published by Plenum Press in 1982 eds G Gregoriadis J Senior and A Trouet This book containing the proceedings of the 2nd NATO ASI Receptor Mediated Targeting of Drugs held again at Cape Sounion Greece during 20 June 1 July 1983 deals with drug delivery through systems

possessing ligands which can recognize and interact with receptors on the target's surface. Receptor recognizing carriers that have recently given promise of realistic expectations in targeting include monoclonal antibodies, certain proteins that home to specific cells in the body and liposomes either as such when they can trigger specific reactions in the reticuloendothelial system or in association with targeting macromolecules. Each of these are discussed extensively by leading authorities in terms of applications in biology and medicine and related methodologies. *Liposome Technology* Gregoriadis, 2018-02-01. Although the role of liposomes in drug targeting has been discussed extensively in several reviews and books, there has been no comprehensive coverage of related methodology. This book constitutes the first attempt to put together all aspects of liposome technology as applied to medical sciences. Volume III is devoted to the growing variety of techniques yielding targeted liposomes and to approaches of studying liposomal behaviour in the biological milieu both in vitro and in vivo. **Liposome Technology: Incorporation of drugs, proteins, and genetic material**, 1984

Liposomes, Drugs and Immunocompetent Cell Functions Claude Nicolau, 1981. *Structure and Properties of Cell Membrane Structure and Properties of Cell Membranes* Benga, 2018-01-18. This book provides in depth presentations in membrane biology by specialists of international repute. The volumes examine world literature on recent advances in understanding the molecular structure and properties of membranes, the role they play in cellular physiology and cell-cell interactions, and the alterations leading to abnormal cells. Illustrations, tables and useful appendices complement the text. Those professionals actively working in the field of cell membrane investigations as well as biologists, biochemists, biophysicists, physicians and academicians will find this work beneficial. **Controlled Drug Delivery** Stephen D. Bruck, 2019-06-04. Published in 1983. Volume 1 deals with basic pharmacological aspects of controlled drug delivery, transport of small molecules through polymers, biodegradation of polymers with or without enzymatic involvement and drug carriers.

Phospholipids Handbook Gregor Cevc, 2018-04-27. Employing a multidisciplinary approach to phospholipid research, this work catalogues the current knowledge of this class of molecules and details the general chemical, physical and structural properties of phospholipid monolayers and bilayers. Phospholipid applications are also covered. **Novel Approaches to Cancer Chemotherapy** Prasad S. Sunkara, 2013-10-22. Novel Approaches to Cancer Chemotherapy compiles theories in tumor biology emphasizing their potential use in developing therapeutic approaches to cancer therapy. This book emphasizes the unique property of a cancer cell and describes in detail how a novel therapeutic approach can be developed. This compilation consists of 11 chapters. Chapters 1, 2, 5, 6 and 7 deal with emerging areas of cancer therapy such as the use of interferon, monoclonal antibodies, liposomes, lymphokines and immunomodulators. The rest of the chapters cover some of the biochemical and enzyme targets in cancer cells such as polyamines, prostaglandin, thromboxane, leukotrienes, 5 α reductase, aromatase, cell membrane glycoproteins and sodium flux. The developments in relation to cancer therapy are mentioned in chapters dealing with biochemical approaches. This book is valuable to biologists, biochemists, immunologists and molecular

biologists intending to exploit the unique properties of cancer cells **Liposome Technology: Targeted drug delivery and biological interaction** ,1984 *Cell Function and Differentiation* George Akoyunoglou,1982 **Interaction of Nanomaterials With the Immune System: Role in Nanosafety and Nanomedicine** Paola Italiani,Diana Boraschi,Lucio R. C. Castellano,Paulo Bonan,Eliton S. Medeiros,2018-04-10

The immune system has the double role of maintaining tissue integrity and homeostasis and of protecting the organism from possible dangers from invading pathogens to environmentally borne dangerous chemicals New chemicals recognisable by the immune system are engineered nanomaterials nanoparticles new agents in our environment that are becoming common due to their presence in many products from constructions and building material e g solar cells pigments and paints tilesand masonry materials to daily products e g food packaging cosmetics and cigarettes Human beings can be accidentally exposed to engineered nanomaterials when these are released from products containing them or during production in workplaces Furthermore intentional exposure occurs in medicine as engineered nanoparticles are used as tools for improving delivery of drugs and vaccines vaccine adjuvants and contrast agents in therapeutic preventive and diagnostic strategies Nanoparticles that come in contact with the immune system after unintentional exposure need to be eliminated from the organism as they represent a potential threat In this case however due to their peculiar characteristics of size shape surface charge and persistence nanoparticles may elicit undesirable reactions and have detrimental effects on the immune system such as cytotoxicity inflammation anaphylaxis immunosuppression Conversely nanomedicines need to escape immune recognition elimination and must persist in the organism long enough for reaching their target and exerting their beneficial effects Immune cells and molecules at the body surface airway and digestive mucosae skin are the first that come in contact with nanomaterials upon accidental exposure while immune effectors in blood are those that more easily come in contact with nanomedical products Thus evaluating the interaction of the immune system with nanoparticles nanomaterials is a topic of key importance both in nanotoxicology and in nanomedicine Immuno nanosafety studies consider both accidental exposure to nanoparticles which may occur by skin contact ingestion or inhalation at doses and with a frequency that are not known and medical exposure which takes place with a defined administration schedule route dose frequency Many studies focus on the interaction between the immune system and nanoparticles that for medical purposes have been specifically modified to stimulate immunity or to avoid immune recognition as in the case of vaccine carriers adjuvants or drug delivery systems respectively The aims of this Research Topic is to provide an overview of recent strategies 1 for assessing the immunosafety of engineered nanomaterials nanoparticles in particular in terms of activation of inflammatory responses such as complement activation and allergic reactions based on the nanomaterial intrinsic characteristics and on the possible carry over of bioactive contaminants such as LPS Production of new nanoparticles taking into account their effects on immune responses in order to avoid undesirable effects on one hand and to design particles with desirable effects for medical applications on the other hand 2 for designing

more effective nanomedicines by either avoiding or exploiting their interaction with the immune systems with particular focus on cancer diagnosis and therapy and vaccination This collection of articles gives a comprehensive view of the state of the art of the interaction of nanoparticles with the immune system from the two perspectives of safety and medical use and aims at providing immunologists with the relevant knowledge for designing improved strategies for immunologically safe nanomaterial applications
