Cluster Analysis for Corpus Linguistics Hermann Moisl, 2015-02-24 The standard scientific methodology in linguistics is empirical testing of falsifiable hypotheses As such the process of hypothesis generation is central and involves formulation of a research question about a domain of interest and statement of a hypothesis relative to it In corpus linguistics the domain is text and generation involves abstraction of data from text data analysis and formulation of a hypothesis based on inference from the results Traditionally this process has been paper based but the advent of electronic text has increasingly rendered it obsolete both because the size of digital corpora is now at or beyond the limit of what can efficiently be used in the traditional way and because the complexity of data abstracted from them can be impenetrable to understanding Linguists are increasingly turning to mathematical and statistical computational methods for help and cluster analysis is such a method It is used across the sciences for hypothesis generation by identification of structure in data which are too large or complex or both to be interpretable by direct inspection This book aims to show how cluster analysis can be used for hypothesis generation in corpus linguistics thereby contributing to a quantitative empirical methodology for the discipline

Cohen, J. Los, H. Pfeiffer, K.-P. Podewski, 2011-10-10 Logic Methodology and Philosophy of Science VI presents the results of recent research into the foundations of science The volume contains invited papers presented at the Congress covering the areas of Logic Mathematics Physical Sciences Biological Sciences and the Humanities **Historical and Comparative Linguistics** Raimo Anttila, 1989-01-01 In any course of historical and comparative linguistics there will be students of different language backgrounds different levels of linguistic training and different theoretical orientation This textbook attempts to mitigate the problems raised by this heterogeneity in a number of

ways Since it is impossible to treat the language or language family of special interest to every student the focus of this book is on English in particular and Indo European languages in general with Finnish and its closely related languages for contrast The tenets of different schools of linguistics and the controversies among them are treated eclectically and objectively the examination of language itself plays the leading role in our efforts to ascertain the comparative value of competing theories This revised edition 1989 of a standard work for comparative linguists offers an added introduction dealing mainly with a semiotic basis of change a final chapter on aspects of explanation particularly in historical and human disciplines and added sections on comparative syntax and on the semiotic status of the comparative method **North American Icelandic** Birna Arnbjörnsdóttir, 2006-12-15 North American Icelandic evolved mainly in Icelandic settlements in Manitoba and North Dakota and is the only version of Icelandic that is not spoken in Iceland But North American Icelandic is a dying language with few left who speak it North American Icelandic is the only book about the nature and development of this variety of Icelandic It details the social and linguistic constraints of one specific feature of North American Icelandic phonology undergoing change namely Fl m li which is the merger of two sets of front vowels Although Fl m li was once a part of traditional Icelandic it was considered too confusing and was systematically eradicated from the language But in North America Fl m li use spread unchecked allowing the rare opportunity of viewing the evolution of a dialect from its birth to its impending demise
