**Literacy and Augmentative and Alternative Communication** Martine Smith,2021-11-15 The new demands of this computer and technology age have focused international attention on literacy levels on literacy development and literacy disorders Governments have launched programs to reduce literacy difficulties and support functional literacy for all In this context the needs of individuals with severe speech and physical impairments may seem relatively small and even unimportant However for this group of individuals in particular unlocking the literacy code opens up tremendous opportunities minimizing the disabling effects of their underlying speech and motor impairments and supporting participation in society Ironically however for a group for whom literacy is such an important achievement current studies suggest that achieving functional literacy skills is particularly challenging In order to read individuals with severe speech impairments must access a set of written symbols and decode them to abstract meaning just as anyone else must do They must convert underlying messages into an alternative external symbol format in order to write In order to become expert in both of these activities they must learn at least a certain core of knowledge about how the symbols and messages relate to each other Just as there are many ways to skin a chicken there are many possible ways to achieve mastery of reading and writing Although the essence of the task may remain the same for individuals with congenital speech impairments they may process the task or develop task mastery in ways that are quite different from speaking children who have no additional physical impairments Literacy and Augmentative and Alternative Communication focuses on individuals with combined physical and communication impairments who rely at least some of the time on aided communication It investigates the range of research and application issues relating to AAC and literacy primarily reading and writing skills from the emergent literacy stage up through adulthood use of reading for various vocational and leisure purposes It provides a balanced view of both the whole language as well as the more analytic approaches to reading instruction necessary for the development of reading skills Facilitating Literacy Skills in an Adult who Uses Augmentative and Alternative Communication (AAC) Melissa M. **Current Literacy Interventions for AAC Users** Payton Proud,2021 Purpose Literacy provides individuals who use augmentative and alternative communication AAC with an avenue to share their original thoughts through generative communication There is limited research regarding literacy intervention for AAC users particularly in high school This study sought to a identify literacy interventions used with high school AAC users b determine the importance placed on literacy by SLPs for high school AAC users and c compare the importance of literacy intervention in high school to other ages of AAC users and other areas of intervention Method Ninety two Nebraska school based speech language pathologists SLPs completed an online survey to answer the research questions Results According to the SLPs surveyed phonological awareness interventions and adapting literacy materials were used as literacy interventions for all ages of AAC users Additionally the importance of literacy remained rated in the range of very important across the age span In contrast the importance of life skills decreased from extremely important in early intervention to very important in elementary school then rose again to extremely important in middle and high school Participants reported the top three reasons SLPs discontinue literacy intervention for AAC users as the student has gained necessary skills intrinsic client factors e g disability level vision motor and a focus on other interventions The top three 3 barriers to literacy intervention were identified as a lack of training confidence in literacy instruction lack of AAC materials and caseload size Conclusion The limited variety of interventions selected for literacy intervention with AAC users across the age span suggests there is not enough research regarding high school literacy intervention Nebraska school based SLPs may not be trained in specific strategies to use with different age developmental groups or that intervention selection is based on literacy skill level rather than age Rather than importance other factors may be contributing to lower rates of literacy intervention such as other treatments competing with literacy for intervention time e g life skills
