Davies, 2016-02-17 Change programmes in both private and public sectors have a poor record of delivering their intended value The reasons given most often for their failure include lack of executive support or buy in from key users loose requirements definition weak programme management and plain wishful thinking They rarely include technical limitations Value Management puts forward the view that the true problem lies in failing to understand the causal links between the intended stakeholder outcomes and the actual programme outputs Repeating the pattern of failure can be avoided by asking two questions Before implementation what capabilities must a change programme deliver when and in what order so as to

cause intended value against a defined purpose with speed and certainty During and after implementation what minor adjustments and or major shifts are needed to be certain that the programme remains on purpose and on value and two answers to be given Target time and align change programmes to deliver maximum intended value to stakeholders the baseline business case track and respond to changes during and beyond implementation to ensure that the programme actually delivers or exceeds intended value value realisation The authors show how by asking and answering these questions direction and delivery of any programme can be clarified and greater economic value achieved **Proceedings of the XIV INTERNATIONAL SYMPOSIUM SYMORG 2014** Aleksandar Marković, Slađana Barjaktarović Rakočević, 2014-06-05

Industrial Engineering and Operations Management João Carlos Gonçalves dos Reis, Francisco Gaudêncio Mendonça Freires, Milton Vieira Junior, 2023-12-20 This proceedings volume gathers selected blinded peer reviewed contributions presented at the XXIX International Joint Conference on Industrial Engineering and Operations Management IJCIEOM held in Lisbon Portugal from June 28th to 30th 2023 This volume focuses especially on the applications of Industrial Engineering and Operations Management for research and practice It includes relevant information for academics since most of the chapters focus on real world case studies and systematic reviews It also provides valuable insights for professionals in the industrial sector by presenting solutions to complex industrial challenges The 2023 iteration of the IJCIEOM conference had the theme Developing resilience in Industrial Engineering and Operations Management and aimed to analyze the resilience of supply chains in the post COVID 19 era The works published in this volume focus on how Digital Transformation DX and Artificial Intelligence AI have made the manufacturing and service industry more resistant to

VUCA elements i.e. volatile, uncertain, complex and ambiguous. Regarding DX and AI, the research specifically focused on supply chain management, project management and Industry 4.0. Other studies explore how industrial engineering incorporated innovative and technological concepts into service and product operations. Overall, this volume provides a valuable resource for researchers and practitioners alike as it presents numerous relevant contributions in identifying new challenges and opportunities for industrial engineering and operations management. This conference was sponsored by renowned international industry engineering associations, particularly the American Society for Engineering Management (ASEM), the Institute of Industrial Systems Engineers (IISE), and the Asociación para el Desarrollo de la Ingeniería de Organización (ADINGOR). **The Value Chain Network** David W. Walters, Deborah A. Helman, 2023-11-15. This book explores how the network sustainable business model is being built in response to the significant changes that are increasing strategic effectiveness and operating efficiency. Incorporating the new post-COVID19 digital landscape, it synthesizes the outputs of practitioner-oriented publications and integrates these with classic concepts in operations strategy to provide a unique perspective on value generally and the value chain network as a part of the business model in the Industry 4.0 environment. Specifically, including illustrative case examples and pursuing a unique workbook approach, each chapter is built around a set of diagrams making the concepts more accessible for graduate business students and practitioners alike.

Operations Management Antonella Petrillo, Fabio De Felice, Germano Lambert-Torres, Erik Bonaldi, 2021-03-03. Global competition has caused fundamental changes in the competitive environment of the manufacturing and service industries. Firms should develop strategic objectives that upon achievement result in a competitive advantage in the marketplace. The forces of globalization on one hand and rapidly growing marketing opportunities overseas, especially in emerging economies on the other, have led to the expansion of operations on a global scale. The book aims to cover the main topics characterizing operations management, including both strategic issues and practical applications. A global environmental business, including both manufacturing and services, is analyzed. The book contains original research and application chapters from different perspectives. It is enriched through the analyses of case studies.

Reliability and Statistics in Transportation and Communication Igor Kabashkin, Irina Yatskiv, Olegas Prentkovskis, 2021-02-06. This book reports on cutting-edge theories and methods for analyzing complex systems such as transportation and communication networks and discusses multidisciplinary approaches to dependability problems encountered when dealing with complex systems in practice. The book presents the most noteworthy methods and results discussed at the International Conference on Reliability and Statistics in Transportation and Communication (RelStat), which took place remotely from Riga, Latvia, on October 14-17, 2020. It spans a broad spectrum of topics from mathematical models and design methodologies to software engineering, data security, and financial issues, as well as practical problems in technical systems such as transportation and telecommunications and in engineering education.

Games in Operations Management Jens O. Riis, Riitta Smeds, Rik Van Landeghem, 2013-04-17

Learning has become a constant state of mind for most professionals in today's organizations. However, to become a true learning enterprise, organizations cannot stop at instilling this yearning for knowledge into their collaborators. They must also capture and formalize the common know-how of the organization as well as provide time and infrastructure to allow learning moments to happen. The aim of the Gaming Workgroup within IFIP 5.7 on Integrated Production Management Systems and the European Group of University Teachers for Industrial Management (EGUTIM) is to develop tools and formalisms to support experimental learning in these organizations. It has been proven that modelling the know-how using visual environments such as multimedia and graphic simulations is a first step. This in turn allows for the development of games, i.e. challenging settings that foster group interaction and problem solving. Games in Operations Management provides an excellent overview of the different game formats that have been developed and tested in past years and includes games in a manufacturing environment, games in a services environment and games for teaching organizational values. The book comprises the selected revised proceedings of the 4th International Workshop on Games in Production Management: Experimental Learning in Industrial Management, which was sponsored by the International Federation for Information Processing (IFIP) and held in November 1998 in Ghent, Belgium. The book will be of particular interest to organizational trainers providing a good overview of state-of-the-art game and training formats as well as hints and advice on how to organize interactive training sessions. It will also be of interest to researchers in industrial engineering, industrial management and operations management.

Health Care Operations Management James R. Langabeer, 2008-05-02 Hospitals are large and complex organizations yet they function largely without sophistication and technology inherent in other large businesses. In a time when well over half of all hospitals report negative operating margins, driving down costs through logistics and the supply chain is one of the most important yet overlooked areas for cost improvements. Hospitals and other healthcare systems spend more time and money on their supply chain than on physicians and doctors' salaries combined. This is one of the first books to focus on the core business support services typically called logistics in healthcare. These include Hospital materials management and the clinical supply chain, Laundry and linen management, eCommerce and technology in hospital logistics, Accounting for medical supplies and inventories, Inventory management, Healthcare vendor collaboration, Demand and supply planning. This is an ideal text for healthcare administrators and functional business managers responsible for purchasing, receiving, supplier management, business planning, accounting and hospital administration as well as for students of hospital business services.
