Inventing Temperature Hasok Chang,2004 [Inventing Temperature](#) Hasok Chang,2007 [Inventing Temperature](#) Hasok Chang,2004-08-05 What is temperature and how can we measure it correctly These may seem like simple questions but the most renowned scientists struggled with them throughout the 18th and 19th centuries In *Inventing Temperature* Chang examines how scientists first created thermometers how they measured temperature beyond the reach of standard thermometers and how they managed to assess the reliability and accuracy of these instruments without a circular reliance on the instruments themselves In a discussion that brings together the history of science with the philosophy of science Chang presents the simple yet challenging epistemic and technical questions about these instruments and the complex web of abstract philosophical issues surrounding them Chang's book shows that many items of knowledge that we take for granted now are in fact spectacular achievements obtained only after a great deal of innovative thinking painstaking experiments bold conjectures and controversy Lurking behind these achievements are some very important philosophical questions about how and when people accept the authority of science [The Crisis from Within: Historians, Theory, and the Humanities](#) Nigel Raab,2015-05-19 In *The Crisis from Within* Nigel Raab explores weaknesses that emerge when using interdisciplinary theories in historical analysis With chapters that focus on knowledge language memory imagining and inventing and civil society the analysis reveals how theoretical applications can be the source of interpretive confusion By drawing from a global range of historical works Nigel Raab demonstrates how this problem concerns all historical sub fields From science in the seventeenth century to communism in the twentieth century theories often overdetermine analysis in a way the historian never intended After the enthusiastic reception of theory for over a generation *The Crisis from Within* argues that the time has come to pause and think seriously about how we wish to proceed with theory **The Scientist's Atom and the Philosopher's Stone** Alan Chalmers,2009-06-04 Drawing on the results of his own scholarly research as well as that of others the author offers for the first time a comprehensive and documented history of theories of the atom from Democritus to the twentieth century This is not history for its own sake By critically reflecting on the various versions of atomic theories of the past the author is able to grapple with the question of what sets scientific knowledge apart from other kinds of knowledge philosophical knowledge in particular He thereby engages historically with issues concerning the nature and status of scientific knowledge that were dealt with in a more abstract way in his *What Is This Thing Called Science* a book that has been a standard text in philosophy of science for three decades and which is available in nineteen languages Speculations about the fundamental structure of matter from Democritus to the seventeenth century mechanical philosophers and beyond are construed as categorically distinct from atomic theories amenable to experimental investigation and support and as contributing little to the latter from a historical point of view The thesis will provoke historians and philosophers of science alike and will require a revision of a range of standard views in the history of science and philosophy

The book is key reading for students and scholars in History and Philosophy of Science and will be instructive for and provide a challenge to philosophers historians and scientists more generally Standardization in Measurement Oliver Schlaudt, Lara Huber, 2015-10-06 The application of standard measurement is a cornerstone of modern science In this collection of essays standardization of procedure units of measurement and the epistemology of standardization are addressed by specialists from sociology history and the philosophy of science **Representation in Scientific Practice** **Revisited** Catelijne Coopmans, Janet Vertesi, Michael E. Lynch, Steve Woolgar, 2014-01-03 A fresh approach to visualization practices in the sciences that considers novel forms of imaging technology and draws on recent theoretical perspectives on representation Representation in Scientific Practice published by the MIT Press in 1990 helped coalesce a long standing interest in scientific visualization among historians philosophers and sociologists of science and remains a touchstone for current investigations in science and technology studies This volume revisits the topic taking into account both the changing conceptual landscape of STS and the emergence of new imaging technologies in scientific practice It offers cutting edge research on a broad array of fields that study information as well as short reflections on the evolution of the field by leading scholars including some of the contributors to the 1990 volume The essays consider the ways in which viewing experiences are crafted in the digital era the embodied nature of work with digital technologies the constitutive role of materials and technologies from chalkboards to brain scans in the production of new scientific knowledge the metaphors and images mobilized by communities of practice and the status and significance of scientific imagery in professional and popular culture Contributors Morana Ala Michael Barany Anne Beaulieu Annamaria Carusi Catelijne Coopmans Lorraine Daston Sarah de Rijcke Joseph Dumit Emma Frow Yann Giraud Aud Sissel Hoel Martin Kemp Bruno Latour John Law Michael Lynch Donald MacKenzie Cyrus Mody Natasha Myers Rachel Prentice Arie Rip Martin Ruivenkamp Lucy Suchman Janet Vertesi Steve Woolgar The Routledge Handbook of Causality and Causal Methods Phyllis Illari, Federica Russo, 2024-12-30 The Routledge Handbook of Causality and Causal Methods adopts a pluralistic interdisciplinary approach to causality It formulates distinct questions and problems of causality as they arise across scientific and policy fields Exploring in a comparative way how these questions and problems are addressed in different areas the Handbook fosters dialogue and exchange It emphasizes the role of the researchers and the normative considerations that arise in the development of methodological and empirical approaches The Handbook includes authors from all over the world and with many different disciplinary backgrounds and its 50 chapters appear in print here for the first time The chapters are organized into the following seven parts Causal Pluralism from Theory to Practice Causal Theory and the Role of Researchers Features of Causal Systems Causal Methods Experimentation and Observation Measurement and Data Causality Knowledge and Action Causal Theory across Disciplinary Borders Essential reading for scholars interested in an interdisciplinary approach to causality and causal methods the volume is also a valuable resource for advanced undergraduates as well as for graduate

Scientific Concepts and Investigative Practice Uljana Feest, Friedrich Steinle, 2012-10-30 Recent philosophy and history of science has seen a surge of interest in the role of concepts in scientific research Scholars working in this new field focus on scientific concepts rather than theories as units of analysis and on the ways in which concepts are formed and used rather than on what they represent They analyze what has traditionally been called the context of discovery rather than or in addition to the context of justification And they examine the dynamics of research rather than the status of the finished research results This volume provides detailed case studies and general analyses to address questions raised by these points such as Can concepts be clearly distinguished from the sets of beliefs we have about their referents What if any sense can be made of the separation between concepts and theories Can we distinguish between empirical and theoretical concepts Are there interesting similarities and differences between the role of concepts in the empirical sciences and in mathematics What underlying notion of investigative practice could be drawn on to explicate the role of concept in such practice From a philosophical point of view is the distinction between discovery and justification a helpful frame of reference for inquiring into the dynamics of research From a historiographical point of view does a focus on concepts face the danger of falling back into an old fashioned history of ideas

Nature Engaged M. Biagioli, J. Riskin, 2012-12-10 This volume gathers essays that focus on the worldliness of science its inseparable engagement in the major institutional bases of social life law market church school and nation With a chronological span reaching from the Renaissance to Big Science its topics range from sundials to genetic sequences from calculating instruments to devices that simulate human behavior from early cartography to techniques for tracing radioactive fallout on a global scale The book aims to show readers with episodes drawn from the span of their modern history the sciences in action throughout human society

Times of History, Times of Nature Anders Ekström, Staffan Bergwik, 2022-02-11 As climate change becomes an increasingly important part of public discourse the relationship between time in nature and history is changing Nature can no longer be considered a slow and immobile background to human history and the future can no longer be viewed as open and detached from the past Times of History Times of Nature engages with this historical shift in temporal sensibilities through a combination of detailed case studies and synthesizing efforts Focusing on the history of knowledge media theory and environmental humanities this volume explores the rich and nuanced notions of time and temporality that have emerged in response to climate change

Philosophical issues in psychiatry III Kenneth S. Kendler, Josef Parnas, 2014-10-02 Psychiatry has long struggled with the nature of its diagnoses The problems raised by questions about the nature of

psychiatric illness are particularly fascinating because they sit at the intersection of philosophy empirical psychiatric psychological research measurement theory historical tradition and policy In being the only medical specialty that diagnoses and treats mental illness psychiatry has been subject to major changes in the last 150 years This book explores the forces that have shaped these changes and especially how substantial internal advances in our knowledge of the nature and causes of psychiatric illness have interacted with a plethora of external forces that have impacted on the psychiatric profession It includes contributions from philosophers of science with an interest in psychiatry psychiatrists and psychologists with expertise in the history of their field and historians of psychiatry Each chapter is accompanied by an introduction and a commentary The result is a dynamic discussion about the nature of psychiatric disorders and a book that is compelling reading for those in the field of mental health history of science and medicine and philosophy

Is Water H₂O? Hasok Chang, 2012-05-23 This book exhibits deep philosophical quandaries and intricacies of the historical development of science lying behind a simple and fundamental item of common sense in modern science namely the composition of water as H₂O Three main phases of development are critically re examined covering the historical period from the 1760s to the 1860s the Chemical Revolution through which water first became recognized as a compound not an element early electrochemistry by which water's compound nature was confirmed and early atomic chemistry in which water started out as HO and became H₂O In each case the author concludes that the empirical evidence available at the time was not decisive in settling the central debates and therefore the consensus that was reached was unjustified or at least premature This leads to a significant re examination of the realism question in the philosophy of science and a unique new advocacy for pluralism in science Each chapter contains three layers allowing readers to follow various parts of the book at their chosen level of depth and detail The second major study in complementary science this book offers a rare combination of philosophy history and science in a bid to improve scientific knowledge through history and philosophy of science

Debating Contemporary Approaches to the History of Science Lukas M. Verburgt, 2024-01-11 Debating Contemporary Approaches to the History of Science explores the main themes problems and challenges currently at the top of the discipline's methodological agenda In its chapters established and emerging scholars introduce and discuss new approaches to the history of science and revisit older perspectives which remain crucial Each chapter is followed by a critical commentary from another scholar in the field and the author's response The volume looks at such topics as the importance of the global digital environmental and posthumanist turns for the history of science and the possibilities for the field of moving beyond a focus on ideas and texts towards active engagement with materials and practices It also addresses important issues about the relationship between history of science on the one hand and philosophy of science history of knowledge and ignorance studies on the other With its innovative format this volume provides an up to date authoritative overview of the field and also explores how and why the history of science is practiced It is essential reading for students and scholars eager to keep a finger on the pulse of what is

happening in the history of science today and to contribute to where it might go next

Philosophical Issues in

Psychiatry IV Kenneth S. Kendler, Josef Parnas, 2017-04-06 The revisions of both DSM IV and ICD 10 have again focused the interest of the field of psychiatry and clinical psychology on the issue of nosology This interest has been further heightened by a series of controversies associated with the development of DSM 5 including the fate of proposed revisions of the personality disorders bereavement and the autism spectrum Major debate arose within the DSM process about the criteria for changing criteria leading to the creation of first the Scientific Review Committee and then a series of other oversight committees which weighed in on the final debates on the most controversial proposed additions to DSM 5 providing important influences on the final decisions Contained within these debates were a range of conceptual and philosophical issues Some of these such as the definition of mental disorder or the problems of psychiatric epidemics have been with the field for a long time Others the concept of epistemic iteration as a framework for the introduction of nosologic change are quite new This book reviews issues within psychiatric nosology from clinical historical and particularly philosophical perspectives The book brings together a range of distinguished authors including major psychiatric researchers clinicians historians and especially nosologists including several leaders of the DSM 5 effort and the DSM Steering Committee It also includes contributions from psychologists with a special interest in psychiatric nosology and philosophers with a wide range of orientations The book is organized into four major sections The first explores the nature of psychiatric illness and the way in which it is defined including clinical and psychometric perspectives The second section examines problems in the reification of psychiatric diagnostic criteria the problem of psychiatric epidemics and the nature and definition of individual symptoms The third section explores the concept of epistemic iteration as a possible governing conceptual framework for the revision efforts for official psychiatric nosologies such as DSM and ICD and the problems of validation of psychiatric diagnoses The book ends by exploring how we might move from the descriptive to the etiologic in psychiatric diagnoses the nature of progress in psychiatric research and the possible benefits of moving to a living document or continuous improvement model for psychiatric nosologic systems The result is a book that captures the dynamic cross disciplinary interactions that characterize the best work in the philosophy of psychiatry

Science and Technology in the Global Cold War Naomi Oreskes, John Krige, 2014-10-31 Investigations of how the global Cold War shaped national scientific and technological practices in fields from biomedicine to rocket science The Cold War period saw a dramatic expansion of state funded science and technology research Government and military patronage shaped Cold War technoscientific practices imposing methods that were project oriented team based and subject to national security restrictions These changes affected not just the arms race and the space race but also research in agriculture biomedicine computer science ecology meteorology and other fields This volume examines science and technology in the context of the Cold War considering whether the new institutions and institutional arrangements that emerged globally constrained technoscientific inquiry or offered greater

opportunities for it The contributors find that whatever the particular science and whatever the political system in which that science was operating the knowledge that was produced bore some relation to the goals of the nation state These goals varied from nation to nation weapons research was emphasized in the United States and the Soviet Union for example but in France and China scientific independence and self reliance dominated The contributors also consider to what extent the changes to science and technology practices in this era were produced by the specific politics anxieties and aspirations of the Cold War Contributors Elena Aronova Erik M Conway Angela N H Creager David Kaiser John Krige Naomi Oreskes George Reisch Sigrid Schmalzer Sonja D Schmid Matthew Shindell Asif A Siddiqi Zuoyue Wang Benjamin Wilson

Philosophical Issues in Psychiatry Kenneth S. Kendler, Josef Parnas, 2015 Psychiatry has been subject to major changes in the last 150 years This book explores the forces that have shaped these changes and how they have impacted on the psychiatric profession in this time The result is a dynamic discussion about the nature of psychiatric disorders and a book that is compelling reading

Theory, Evidence, Data: Themes from George E. Smith Marius Stan, Christopher Smeenk, 2023-11-27 This book builds on the path breaking work of George E Smith and further explores the notions of evidence and confirmation in the exact sciences from two perspectives conceptual and historical Contributions in this volume investigate the philosophical presuppositions explanatory scope and historical precursors of evidence in mathematical physics and related disciplines The papers are written by and of interest to philosophers and historians of science

Constructive Axiomatics for Spacetime Physics Emily Adlam, Niels Linnemann, James Read, 2025-06-25 The programme of constructive axiomatics promulgated by Hans Reichenbach in 1924 seeks to build up the architecture of our best theories of physics from basic axioms supposedly imbued with immediate and indubitable empirical content Taking inspiration from Reichenbach Hermann Weyl proposed his own causal inertial approach to the constructive axiomatization of Einstein's general relativity according to which a relativistic spacetime can be constructed solely from the trajectories of light rays and freely falling particles this project however came to fruition only in 1972 with the constructive axiomatization of general relativity due to Ehlers Pirani and Schild EPS One century since Reichenbach and fifty years since EPS Constructive Axiomatics for Spacetime Physics is a celebration of the constructive axiomatic methodology It achieves four main tasks First it provides a thoroughgoing presentation of the EPS axiomatization closing missing loopholes identifying problematic axioms and so forth in this way one gains a much improved appreciation of the extent to which a causal inertial approach to general relativity might succeed and of what such an approach might offer Second it synthesizes and assesses the vast but disparate literature on constructive axiomatics which has arisen over the past century and sets the methodology in its proper philosophical context Third it generalizes the approach to apply to quantum spacetimes And fourth it applies the approach to the context of non relativistic spacetime physics All in all the book demonstrates that constructive axiomatics is live and kicking the book will become the go to resource for this way of philosophizing about the nature of space and time
