**Ion Exchange for Pollution Control** - Calmon C Ed,1979      **Chemistry for Protection of the Environment 1985**

G. Alaerts,L. Pawlowski,W.J. Lacy,1986-01-01 The main theme of this symposium was the application of chemical methods for water and wastewater treatment and their effect on the environment The participants represented many countries and many disciplines and taken together their papers provide a very interesting overview of the way in which chemical processes are used in different parts of the world The contributions from the USA are mainly devoted to methods for reducing the environmental hazard of alternative energy sources such as oil shales and tar sands A fresh interest in coal and lignite is also apparent in the papers from Canada and from western and eastern Europe Many papers and discussions deal with the related technology of desulphurisation of coal and oil during combustion or in exhaust gases much of the research in this area being inspired by the problems of acid rain and the damage to forests in the northern hemisphere      **Soils in Waste**

**Treatment and Utilization** W.H. Fuller,2018-05-04 In these books we bring together and correlate recent information known to have a prominent influence on the rate of movement of pollutants from wastes and their leachates in the soil The emphasis is on those characteristics most amenable to modification and their management such that secure and rational choices of disposal can be made Identification of limits of the state of the art are carefully defined This book presents five distinct but related subject matter sections The first topic relates to soil as a natural system to prepare the reader with a basic knowledge of soil properties as they must become involved in waste management at the disposal facility The soil its depth profile and certain characteristics are identified and described      *Ion Exchange Technology I* Inamuddin

Dr.,Mohammad Luqman,2012-06-02 Ion exchange Technology I Theory and Materials describes the theoretical principles of ion exchange processes More specifically this volume focuses on the synthesis characterization and modelling of ion exchange materials and their associated kinetics and equilibria This title is a highly valuable source not only to postgraduate students and researchers but also to industrial R D specialists in chemistry chemical and biochemical technology as well as to engineers and industrialists      **Ion Exchange Pollution Control** C. Calmon,2018-02-06 The aim of these volumes is not to cover all phases of ion exchange theory which may be found in general texts nor to cover every application in the literature or to show an engineer ways on how to become an expert in the field so he could do it all by himself The main purpose of these books is to show the practical engineer what has been done in various types of applications of ion exchange processes in pollution control how to set up laboratory tests the problems that may be encountered to identify the individuals and organizations who are experts in the various phases of ion exchange and most importantly to emphasize the new developments in the polymers with active sites that offer new approaches to wastewater treatment methods      Research

Reporting Series ,1978      *Zeolites: Science and Technology* Fernando Ramôa Ribeiro,2012-12-06 Zeolites have been the focus of intensive activity and growth in applications over the past 25 years in ion exchange in adsorption and in catalytic

process technology Beginning with the synthetic zeolites A X and Y continuing into the emerging ZSM series and including selected natural zeolites applications span the range from large scale purification and separation to such major petroleum and petrochemical processes as catalytic cracking and aromatics alkylation The future promises several new areas of significant use as our energy resource base is expanded As a result a NATO Advanced Study Institute on Zeolites was held in Alcabideche Portugal May 12 1983 Its purpose was to summarize the state of the art in zeolite science and technology with particular emphasis on recent developments This summary is intended to complement presentations of the latest research results at the 1983 International Zeolites Association meeting in Reno Nevada USA Both the fundamentals concepts and industrial applications are addressed in the lectures of the Institute Individual chapters cover historical development structure crystallography and synthesis techniques Basic principles of adsorption diffusion ion exchange and acidity are reviewed A section on catalysis addresses shape selectivity transition metals bifunctional catalysis and methanol to gasoline Included in the section on industrial applications are chapters on reactor and adsorber design catalytic cracking xylene and n paraffins isomerization as well as ion exchange and adsorption
