Khomskii, 2014-10-23 Describing all aspects of the physics of transition metal compounds this book provides a comprehensive overview of this unique and diverse class of solids Beginning with the basic concepts of the physics of strongly correlated electron systems the structure of transition metal ions and the behaviours of transition metal ions in crystals it goes on to cover more advanced topics such as metal insulator transitions orbital ordering and novel phenomena such as multiferroics systems with oxygen holes and high T<sub>c</sub> superconductivity Each chapter concludes with a summary of key facts and concepts presenting all the most important information in a consistent and concise manner Set within a modern conceptual framework and providing a complete treatment of the fundamental factors and mechanisms that determine the properties of transition metal compounds this is an invaluable resource for graduate students researchers and industrial practitioners in solid state physics and chemistry materials science and

inorganic chemistry      **Transition Metals in Supramolecular Chemistry** L. Fabbri, Antonio Poggi, 2013-03-09 Since the pioneering publications on coordination chemistry by Lehn and Pedersen in the late 1960s coupled with the more orthodox interest from the transition metal chemists on template reactions Busch 1964 the field of supramolecular chemistry has grown at an astonishing rate The use of transition metals as essential constituents of multi component assemblies has been especially sharp in recent years since the metals are prone to quick and reversible redox changes and there is a wide variety of metal ligand interactions Such properties make supramolecular complexes of transition metal ions suitable candidates for exploration as light energy converters and signal processors *Transition Metals in Supramolecular Chemistry* focuses on the following main topics 1 metal controlled organization of novel molecular assemblies and shapes 2 design of molecular switches and devices operating through metal centres 3 supramolecular catalysts that mimic metalloenzymes 4 metal containing sensory reagents and supramolecular recognition and 5 molecular materials that display powerful electronic optoelectronic and magnetic properties      *Instrumental Methods in Metal Ion Speciation* Imran Ali, Hassan Y. Aboul-Enein, 2006-03-14 The knowledge of metal ion speciation is essential for predicting the exact toxicities of metal ion species in the environment Metal ions can exist in various oxidation states each of which possesses different physical and chemical properties as well as exhibit varying toxicities Often toxicity data is unreliable because it is based on metal io
