Even Odder Perceptions Richard L. Gregory, 2017-03-27 Why did Newton struggle for thirty years to make gold by alchemy and then become Master of the Mint Why do we blush Why do we have illusions In this collection of essays originally published in 1994 Richard Gregory once again delights and tantalizes with tales of his childhood his family and friends the famous and the infamous and weaves them into a rich pattern to illuminate scientific principles and puzzles If you can put the book down each essay is complete on its own but they are united by the magic of human perception From seeing and hearing to feeling and believing from the shape of traffic signs to knowledge of quantum mechanics all our interactions with the outside world are mediated by perception Our knowledge is further distilled by the machines which help our own biological mechanisms like microscopes and telescopes electric light and even more powerfully by computer technology But if the natural structures of perception can affect our interpretation of the world how much more dramatically might science education and tools of information technology enhance though sometimes mislead our perception of reality Even Odder Perceptions may not have all the answers but it certainly poses more questions

Even Odder Perceptions Richard Langton Gregory, 1994 Our senses bring us all the information we have about the outside world but do they tell the truth If you've never questioned this before you may be about to From seeing and hearing to feeling and believing from the shape of traffic signs to knowledge of quantum mechanics all our interactions with the outside world are mediated by perception Knowledge is further distilled by the machines which help our own biological mechanisms magnifying glasses electric lights and even more powerfully computer technology However if the natural structures of perception can affect our interpretation of the world how much more dramatically might these tools of accuracy distort reality In his latest collection of essays Richard Gregory uses a series of whimsical tales of his childhood family and friends the famous and the infamous to illuminate scientific principles and puzzles He weaves together these amusing anecdotes to form a personal vista of some of the most profound and puzzling questions in science today quickly drawing the reader into debates on Hamlet's feelings Schrodinger's cat thinking machines and more At times charming entertaining and even confusing Even Odder Perceptions will always leave the reader pondering Each individual essay stands complete on its own yet read as a whole the book is an insightful and entertaining study on the magic of human perception

theory and cybernetics such as Norbert Wiener Warren McCulloch and Frank Rosenblatt appear prominently in the recollections The interviewees agree about some things and disagree about more Together they tell the story of how science is actually done including the false starts and the Darwinian struggle for jobs resources and reputation Although some of the interviews contain technical material there is no actual mathematics in the book Contributors James A Anderson Michael Arbib Gail Carpenter Leon Cooper Jack Cowan Walter Freeman Stephen Grossberg Robert Hecht Neilsen Geoffrey Hinton Teuvo Kohonen Bart Kosko Jerome Lettvin Carver Mead David Rumelhart Terry Sejnowski Paul Werbos Bernard Widrow

Hermeneutics at the Intersection of Medical Technology Jan Kyrre Berg Olsen Friis, 2025-05-07 This book explores the crucial role of interpretation in medical radiology and beyond emphasizing its pervasive influence on medical knowledge Friis examines radiological analysis through hermeneutics cognition and visual perception studies He argues that interpretation is inherently embodied and essential to human action particularly in radiology where technology extends vision beyond the human eye's limits Yet interpretation varies among radiologists Can it be too relative shaped by subjective factors irrelevant to the task Attempts to eliminate cognitive bias through psychophysical and cognitivist approaches have failed Interpretation is an active context dependent process inseparable from human experience Friis contends that the only solution is to expand cognitive reach through collaborative interpretative practices integrating diverse perspectives Radiology like all medical fields benefits from shared expertise where multiple viewpoints refine diagnostic accuracy and mitigate individual bias By fostering structured cooperation among radiologists clinicians interpretative reliability can be strengthened The key is not to eliminate subjectivity but to harness it constructively through interdisciplinary dialogue collective reasoning and continuous knowledge exchange

Workshops in Perception Rod Power, Steven Hausfeld, Angela Gorta, 2017-03-27 Originally published in 1981 *Workshops in Perception* is designed to enable students to devise their own experiments in sensory processes or perception The thirty workshops include over a hundred different possible student projects covering the full range of the senses and interactions among them The topics range from simple perimetry to the perception of language and social situations In addition to more traditional topics such as illusions adaptation and after effects they include lifespan perceptual development musical illusions and even a consumer oriented study of road atlases Each of the ten major sections has a general introduction to the topic with suggestions for reading Each workshop has a more specific introduction to its topic and

an experiment outlined A typical outline will suggest more independent variables than a student can handle and it is up to the student to select the variables he considers important and to choose the appropriate levels of the variables Although many suggestions are made regarding the actual running of each workshop deciding precisely how to carry out the experiment is left up to the student Pilot work and consultation with the tutor is encouraged Suggestions for the form of the analysis are made but again the details are left to the student Several alternatives to the main workshop are outlined briefly and these are suited to the more adventurous or advanced student Thus the book is suited to students with a wide range of ability

Digital Draw Connections Fabio Bianconi, Marco Filippucci, 2021-04-27 This book stems from the seminal work of Robert Venturi and aims at re projecting it in the current cultural debate by extending it to the scale of landscape and placing it in connection with representative issues It brings out the transdisciplinary synthesis of a necessarily interdisciplinary approach to the theme aimed at creating new models which are able to represent the complexity of a contradictory reality and to redefine the centrality of human dimension As such the volume gathers multiple experiences developed in different geographical areas which come into connection with the role of representation Composed of 43 chapters written by 81 authors from around the world with an introduction by Jim Venturi and Cezar Nicolescu the volume is divided into two parts the first one more theoretical and the other one which showcases real world applications although there is never a total split between criticism and operational experimentation of research

Passibility Wolff-Michael Roth, 2011-08-05 This book argues that the constructivist metaphor has become a self appointed overriding concept that suppresses other modes of thinking about knowing and learning science Yet there are questions about knowledge that constructivism cannot properly answer such as how a cognitive structure can intentionally develop a formation that is more complex than itself how a learner can aim at a learning objective that is by definition itself unknown how we learn through pain suffering love or passion and the role emotion and crises play in knowing and learning In support of the hypothesis that passibility underlies cognition readers are provided with a collation of empirical studies and phenomenological analyses of knowing and learning science in schools scientific laboratories and everyday life all of which defy a constructivist explanation The author argues that passibility constitutes an essential factor in the development of consciousness with a range of essential experiences that cannot be brought into the linguistic realm His exploration is guided by concepts such as otherness passion passivity and undecidability and concludes by resituating the construction metaphor to accord it its proper place in a more comprehensive theory of learning

The Realistic Empiricism of Mach, James, and Russell Erik C. Banks, 2014-08-28 This book redevelops an important movement in philosophy for the first time exploring the ways in which three of the greatest thinkers can be connected and applying their ideas to contemporary problems in the philosophy of mind and the philosophy of science

Possibilities of Perception Jennifer Church, 2013-07-25 The

epistemology and the phenomenology of perception are closely related insofar as both depend on experiences of self-evident objectivity experiences in which the objectivity of a state of affairs is evident from within our experience of that state of affairs Jennifer Church offers a distinctive account of perception showing how imagining alternative perspectives and alternative possibilities plays a key role in creating and validating experiences of self-evident objectivity Offered first as an account of what it takes to perceive ordinary objects such as birds and trees the account is then extended to show how it is also possible to perceive such things as causes reasons mental states distant galaxies molecular arrangements mathematical relations and interpersonal obligations A chapter is devoted to the phenomenology and epistemology of moral perception including the perception of persons as such and a chapter is devoted to the peculiarities of aesthetic perception including the perception of artworks as such In all of these cases Church argues perception can be literal not merely figurative or metaphorical and substantive not merely formal or deflationary Her account helps to explain the advantages of perceptual versus non-perceptual knowledge It also helps to make sense of some historical discussions of the role of the imagination in acquiring and validating knowledge in relation to Plato's cave Descartes' explanation of rational intuition and Kant's arguments concerning objectivity causality and the Categorical Imperative

The Rationality of Perception Susanna Siegel, 2017 One of the most important divisions in the human mind is between perception and reasoning We reason from information that we take ourselves to have already but perception is a means of taking in new information Reasoning can be better or worse but perception is considered beyond reproach The Rationality of Perception argues that these two aspects of the mind become deeply intertwined when beliefs fears desires or prejudice influence what we perceive When the influences reach all the way to perceptual appearances we face a philosophical problem is it reasonable to strengthen what one believes or fears or suspects on the basis of an experience that was generated by those very same beliefs fears or suspicions Drawing on examples involving racism emotion and scientific theories Siegel argues that perception itself can be rational or irrational and makes vivid the relationship between perception and culture

Wolff-Michael Roth, 2011-05-09 This study examines the origins of geometry in and out of the intuitively given everyday lifeworlds of children in a second grade mathematics class These lifeworlds though pre geometric are not without model objects that denote and come to anchor geometric idealities that they will understand at later points in their lives Roth's analyses explain how geometry an objective science arises anew from the pre scientific but nevertheless methodic actions of children in a structured world always already shot through with significations He presents a way of understanding knowing and learning in mathematics that differs from other current approaches using case studies to demonstrate contradictions and incongruences of other theories Immanuel Kant Jean Piaget and more recent forms of radical social constructivism embodiment theories and enactivism and to show how material phenomenology fused with phenomenological sociology provides answers to the problems that these other paradigms do not answer
