To provide information about stocking the USDA Forest Service's sugar maple sap production project at Burlington, Vermont, has made a regionwide study of the relationships between crown diameter and d.b.h. diameter breast high of open-grown sugar maple trees. *Acer saccharum* Marsh. We found a strong relationship between crown diameter and d.b.h. and converted these data into stocking guides for various stand size classes. The stocking guides are based on the assumption that trees with full crowns produce the best sap yields. S3
