N STANTON (A:YOUNG, M, S.), 2001 [Handbook of Systems Thinking Methods](#) Paul M. Salmon, Neville A. Stanton, Guy H. Walker, Adam Hulme, Natassia Goode, Jason Thompson, Gemma J.M.

Read,2022-08-19 The systems thinking philosophy has become popular in human factors and ergonomics and safety science. These methods are being used to understand and resolve complex societal problems in areas such as transport safety, workplace safety, medication error, disaster management, child abuse, financial crises, terrorism, climate change, and public health and wellbeing. This handbook presents practical step by step guidance for practitioners and researchers wishing to use these methods to tackle complex problems. Each method includes an example case study which demonstrates how the method can be applied and how the results can be interpreted and translated into practical recommendations. The book presents practical guidance on state of the art systems thinking methods and offers case study applications describing systems thinking methods in novel areas. It explains how to translate the outputs of systems thinking methods in practice and introduces systems thinking with an overview of Human Factors and Ergonomics applications. This book will serve as a great reference for students and engineers in the field of systems engineering, complex systems, and the design and development of systems including ergonomics, human factors, and systems engineers, designers, architects, industrial engineers, project management engineers, reliability engineers, risk engineers, software engineers, and computer engineers. Human Factors Methods and Accident Analysis Dr Guy H Walker, Dr Daniel P Jenkins, Dr Laura A Rafferty, Dr Michael G Lenné, Professor Neville A Stanton, Professor Paul M Salmon, 2012-10-01 Human Factors Methods and Accident Analysis is the first book to offer a practical guide for investigators, practitioners, and researchers wishing to apply accident analysis methods. It is also unique in presenting a series of novel applications of accident analysis methods including HF methods not previously used for these purposes, e.g. EAST critical path analysis, as well as applications of methods in new domains. **Designing Interaction and Interfaces for Automated Vehicles** Neville Stanton, Kirsten M. A. Revell, Patrick Langdon, 2021-03-10 Driving automation and autonomy are already upon us, and the problems that were predicted twenty years ago are beginning to appear. These problems include shortfalls in expected benefits, equipment unreliability, driver skill fade, and error inducing equipment designs. **Designing Interaction and Interfaces for Automated Vehicles: User Centred Ecological Design and Testing** investigates the difficult problem of how to interface drivers with automated vehicles by offering an inclusive human centred design process that focusses on human variability and capability in interaction with interfaces. This book introduces a novel method that combines both systems thinking and inclusive user centred design. It models driver interaction, provides design specifications, concept designs, and the results of studies in simulators, on the test track, and in road going vehicles. This book is for designers of systems, interfaces, interactions, UX, Human Factors, and Ergonomics researchers and practitioners involved with systems engineering and automotive academics. _ In this book Prof Stanton and colleagues show how Human Factors methods can be applied to the tricky problem of interfacing human drivers with vehicle automation. They have developed an approach to designing the human automation interaction for the handovers between the driver and the vehicle. This approach has been tested in driving simulators and most interestingly in real vehicles on British motorways. The approach called User

Centred Ecological Interface Design has been validated against driver behaviour and used to support their ongoing work on vehicle automation I highly recommend this book for anyone interested or involved in designing human automation interaction in vehicles and beyond Professor Michael A Regan University of NSW Sydney AUSTRALIA

Distributed Situation Awareness Paul M. Salmon, Neville A. Stanton, Daniel P. Jenkins, 2017-09-18 Having an accurate understanding of what is going on is a key commodity for teams working within military systems Situation awareness SA is the term that is used within human factors circles to describe the level of awareness that operators have of the situation that they are engaged in it focuses on how operators develop and maintain a sufficient understanding of what is going on in order to achieve success in task performance Over the past two decades the construct has become a fundamental theme within the areas of system design and evaluation and has received considerable attention from the human factors research community Despite this there is still considerable debate over how SA operates in complex collaborative systems and how SA achievement and maintenance is best supported through system procedure and interface design This book focuses on the recently developed concept of distributed situation awareness which takes a systems perspective on the concept and moves the focus on situation awareness out of the heads of individual operators and on to the overall joint cognitive system consisting of human and technological agents Situation awareness is viewed as an emergent property of collaborative systems something that resides in the interaction between elements of the system and not in the heads of individual operators working in that system The first part of the book presents a comprehensive review and critique of existing SA theory and measurement approaches following which a novel model for complex collaborative systems the distributed SA model and a new modelling procedure the propositional network approach are outlined and demonstrated The next part focuses on real world applications of the model and modelling procedure and presents four case studies undertaken in the land warfare multinational warfare and energy distribution domains Each case study is described in terms of the domain in question the methodology employed and the findings derived in relation to situation awareness theory The third and final part of the book then concentrates on theoretical development and uses the academic literature and the findings from the case study applications to validate and extend the distributed SA model described at the beginning of the book In closing the utility of the distributed SA model and modeling procedure are outlined and a series of initial guidelines for supporting distributed SA through system design are articulated
