Prototype and Scriptaculous in Action Tom Locke, Bear Bibeault, Dave Crane, 2007-03-31 Prototype and Scriptaculous are libraries that extend standard Ajax They make it easier to program Ajax and provide powerful features like drag and drop and animation In this book developers learn by playing and see how the libraries work in the real world As experience with Ajax increases developers want the standard Ajax capabilities they repeatedly use to be preprogrammed for them and that's exactly what Ajax libraries do for them They reduce the pain of handling cross browser inconsistencies they add useful language features and provide sophisticated functionality Of these Prototype is the most popular JavaScript and Ajax framework for low level user interface features such as animation drag and drop and pre built widgets Together they free the developer up to concentrate on building the

application They make a rich user experience easy to achieve This book guides the reader through the Prototype and Scriptaculous libraries feature by feature In just 350 pages readers will find over 100 small working examples to help them explore the libraries As well they will develop a web based image gallery that teaches them how to use Prototype and Scriptaculous in the real world Purchase of the print book comes with an offer of a free PDF ePub and Kindle eBook from Manning Also available is all code from the book Catalogue of Distributed File/Operating Systems Uwe M.

Borghoff,2012-12-06 In general distributed systems can be classified into Distributed File Systems DFS and Distributed Operating Systems DOS The survey which follows distinguishes between DFS approaches in Chapters 2 3 and DOS approaches in Chapters 4 5 Within DFS and DOS I further distinguish traditional and object oriented approaches A traditional approach is one where processes are the active components in the systems and where the name space is hierarchically organized In a centralized environment UNIX would be a good example of a traditional approach On the other hand an object oriented approach deals with objects in which all information is encapsulated Some systems of importance do not fit into the DFS DOS classification I call these systems closely related and put them into Chapter 6 Chapter 7 contains a table of comparison This table gives a lucid overview summarizing the information provided and allowing for quick access The last chapter is added for the sake of completeness It contains very brief descriptions of other related systems These systems are of minor interest or do not provide transparency at all Sometimes I had to assign a system to this chapter simply for lack of adequate information about it
