Human Memory Robert L. Greene, 2014-01-02 The fact that cognitive psychology has become largely concerned with a handful of laboratory tasks has brought expressions of concern and suggestions about how to place the field on a more solid footing The view expressed here however is that the classic cognitive paradigms have become fascinating puzzles on which some of the best minds in the field have labored An examination of the development of research in these areas yields many examples of the scientific method at its most sophisticated as well as impressive examples of how theories and data can interact Covering the whole temporal range of memory experiences this volume provides a review of the major paradigms that have been used by experimental psychologists to study human memory

Time-constrained Memory Jean-Pierre Corrivéau, 2014-02-04 This book tries to answer the question posed by Minsky at the beginning of The Society of Mind to explain the mind we have to show how minds are built from mindless stuff from parts that are much smaller and simpler than anything we d considered smart The author believes that cognition should not be rooted in innate rules and primitives but rather grounded in human memory More specifically he suggests viewing linguistic comprehension as a time constrained process a race for building an interpretation in short term memory After reviewing existing psychological and computational approaches to text understanding and concluding that they generally rely on self validating primitives the author abandons this objectivist and normative approach to meaning and develops a set of requirements for a grounded cognitive architecture He then goes on to explain how this architecture must avoid all epistemological commitments be tractable both with respect to space and time and most importantly account for the diachronic and non deterministic nature of comprehension In other words a text may or may not lead to an interpretation for a specific reader and may be associated with several interpretations over time by one reader Throughout the remainder of the book the author demonstrates that rules for all major facets of comprehension syntax reference resolution quantification lexical and structural disambiguation inference and subject matter can be expressed in terms of the simple mechanistic computing elements of a massively parallel network modeling memory These elements called knowledge units work in a limited amount of time and have the ability not only to recognize but also to build the structures that make up an interpretation Designed as a main text for graduate courses this volume is essential to the fields of cognitive science artificial intelligence memory modeling text understanding computational linguistics and natural language understanding Other areas

of application are schema matching hermeneutics local connectionism and text linguistics With its extensive bibliography the book is also valuable as supplemental reading for introductory undergraduate courses in cognitive science and computational linguistics

Dynamic Cognitive Processes Nobuo Ohta, Colin M. MacLeod, Bob Uttl, 2006-06-09 The conference from which this book derives took place in Tsukuba Japan in March 2004 The fifth in a continuing series of conferences this one was organized to examine dynamic processes in lower order cognition from perception to attention to memory considering both the behavioral and the neural levels We were fortunate to attract a terrific group of contributors representing five countries which resulted in an exciting conference and as the reader will quickly discover an excellent set of chapters In Chapter 1 we will provide a sketchy road map to these chapters elucidating some of the themes that emerged at the conference The conference itself was wonderful We very much enjoyed the variety of viewpoints and issues that we all had the opportunity to grapple with There were lively and spirited exchanges and many chances to talk to each other about exciting new research precisely what a good conference should promote We hope that the readers of this book will have the same experience moving from careful experimental designs in the cognitive laboratory to neural mechanisms measured by new technologies from the laboratory to the emergency room from perceptual learning to changes in memory over decades all the while squarely focusing on how best to explain cognition not simply to measure it Ultimately the goal of science is of course explanation We also hope that the reader will come away absolutely convinced that cognition is a thoroughly dynamic interactive system

Foundations of Human Memory

Michael Jacob Kahana,2014-05-01 *Foundations of Human Memory* provides an introduction to the scientific study of human memory with an emphasis on both the major theories of memory and the laboratory studies that have been used to test those theories and inspire their further development Written with the undergraduate student in mind the text assumes no specific background in the subject but a general familiarity with scientific method and quantitative approaches to the treatment of data *Foundations of human memory* is organized around the major empirical paradigms used to study memory in the laboratory and the theories used to explain data obtained using those paradigms The text begins with a focus on memory for individual items building up to memory for associations between items and finally to memory for entire sequences of items and the problem of memory search Several major theories of memory are considered in detail including strength theory summed similarity theory neural network based theories retrieved context theory and theories based on the division of memory into separate short term and long term storage systems The text emphasizes basic research over applied problems but brings in real world examples and neuroscientific evidence as appropriate *The Advertised Mind* Erik Du Plessis,2005 Du Plessis draws on information about the working of the human brain from psychologists neurologists and artificial intelligence specialists to suggest why ad liking is such an important factor in advertisement and how it predisposes consumers to buy the brand that is being advertised *The Deja Vu Experience* Alan S. The Acquisition and Retention of Knowledge: A Cognitive View D.P. Ausubel, 2012-12-06 In 1963 an initial attempt was made in my The Psychology of Meaningful Verbal Learning to present a cognitive theory of meaningful as opposed to rote verbal learning It was based on the proposition that the acquisition and retention of knowledge particularly of verbal knowledge as for example in school or subject matter learning is the product of an active integrative interactional process between instructional material subject matter and relevant ideas in the learner's cognitive structure to which the new ideas are relatable in particular ways This book is a full scale revision of my 1963 monograph The Psychology of Meaningful Verbal Learning in the sense that it addresses the major aforementioned and hitherto unmet goals by providing for an expansion clarification differentiation and sharper focusing of the principal psychological variables and processes involved in meaningful learning and retention i.e. for their interrelationships and interactions leading to the generation of new meanings in the individual learner The preparation of this new monograph was largely necessitated by the virtual collapse of the neobe
