**Business Process Management (BPM)** Bernhard Hitpass, 2014-07-07 Nowadays an organization is expected to be not only effective and efficient as it was formerly. Now in addition it should be able to adapt to the frequent changes driven by globalization. Let us say be agile. This business agility has become more important in these times of globalization. The organization that best responds to the fast changing market which is becoming increasingly frequent will have better competitive advantages than those that fail to sustain the pace imposed by globalization. What are the tools that organizations are using to better achieve agility, effectiveness and efficiency? The answer is more control and efficiency with the ability to manage change in their business processes because these can create value for customers. BPM is an integrative discipline that comprises management disciplines and techniques. It involves the business layers and technology including also management through processes as an integrated whole. The structure of this book consists of two parts. Part I: Fundamentals of BPM describes the state of the art of the major BPM theoretical concepts. Part II: Implementation for BPM is dedicated to presenting the concepts of implementation developed largely by the author. This second part considers the technological support in each of the BPM layers. The author shows how to implement the core principles of the discipline which differs itself from traditional management. This book is for all professionals whether they perform in the public, private or non-profits sectors who require or want to learn more about this process management discipline. It is also for students and academics of the industrial and computer sciences and to all the business and administration schools.

*Business Process Management Systems* James F. Chang, 2016-04-19 With a focus on strategy and implementation, James Chang discusses business management practices and the technology that enables them. He analyzes the history of process management practices and demonstrates that BPM practices are a synthesis of radical change and continuous change practices. The book is relevant to both business and IT professionals.

*Cooperative Design, Visualization, and Engineering* Yuhua Luo, 2009-09-19 The 6th International Conference on Cooperative Design, Visualization and Engineering (CDVE 2009) was held in central Europe, Luxembourg. Participants from five continents came together to celebrate this annual event. The papers published in the conference in this volume reflect the new progress in the following aspect: Research in developing cooperative applications is currently focusing on two directions. One is the cooperation in the software development process and the other is the variety of the targeted cooperative software products. Many papers address how to facilitate cooperation in the software engineering process, particularly global software engineering. The importance of sharing information in cooperation is emphasized by the authors. For example, papers that addressed the development of sharing mental models, tools for easily shared projects, sharing links for cross-media information spaces, sharing resources and transfer of knowledge among team members etc. have attracted special attention. Many papers presented in this volume are the research results of tackling problems in developing a great variety of cooperative software products. The targeted systems are cooperative support for music creation, cooperative process management systems, cooperative visualization systems for geographic information

cooperative cultural information sharing platforms cooperative reasoning systems cooperative sensor networks for environment monitoring remote cooperative video vehicle monitoring systems etc Another aspect of the papers in this volume is dealing with the problems in earlier phases in the cooperative product production life cycle The topics addressed range from partner selection for operation at the beginning requirement gathering requirement negotiation to cooperative design production to cooperative testing and finally to cooperative system operation
